Mastiffs were only fair, St. Bernards and Newfoundlands very moderate. Greyhounds, one or two very fair specimens. Setters poor. A good Dane was that owned by Senator Sanford, by name Ormonde. As is the case with some others from this kennel, he was very shy in the ring. Spaniels were fairly good, collies perhaps better than former years at a local show. A rattling good young Manchester terrier was Mr. John Welsh's Tony. Quite a sprinkling of Irish terriers; Fagan still was shown altogether too fat; he is an old-fashioned one and was beaten by Geo. Geoghegan's Rugby Norah II. Dr. Rennie has a good bull-terrier in Wentworth Countess, although her brindle ear may handicap her a trifle in hot company. Fox-terriers, except for Undercliffe Cornet, were very poor indeed. One Scottish terrier was on hand, and although he is too young yet to show, looks a wear and tear customer. Taken all through the show was a good one. With such a committee looking after the interests of the Hamilton Kennel Club matters doggy are bound to boom, and already a big show is being talked of next year.

The cup for best dog or bitch in the show was awarded to A. Whyte's Undercliffe Cornet.

SPECIALS.

Best in each breed—Mastiff, J. Armstrong's Niji. Great Dane, E. J. Sanford's Ormonde. St. Bernard dog, W. J. Macdonald's Robert Bruce; bitch, George Paine's Tassie; pup, Robert Bruce. Newfoundland, J. Roddigan's Nellie. Greyhound dog, S. F. Taylor's Ponto; bitch, C. Webster's Jess; best in show Ponto. Collie, E. Harris's May. Pointer, F. Dowding's Boxer. Best setter, H. S. Bunbury's Bob. Harrier, W. Richards's Sir Richard. Irish water spaniel, W. Marsden's Jacko. Black and tan terrier, John Welsh's Perfecto Nadjy. Irish terrier, Geo. Geoghegan's Rugby Norah II. Bull-terrier, Dr. Rennie's Wentworth Countess. Fox-terrier, wire or smooth never shown at C. K. C. shows, M. O'Rourke's Bodo; best in show, Undercliffe Cornet; best bitch, H. S. Bohr's Nellie; puppy, E. Graham's Rose. Field spaniel, R. G. Dow's Canadian Boy. Cocker spaniel dog, Miss M. Morrison's Beauty; bitch, Fred Flynn's Nan. Pug, Miss A. Dingwall's Prince. King Charles spaniel, Lovell and Wodehouse's Annie Laurie. Scottish terrier, Mrs. J. J. Dean's General Coxey. Best pet dog, Mrs. Start's Dot; second best, Mrs. J. Down's Dolly.

### Tick Boy and the Manitoba Field Trials.

*Editor Forest and Stream:*

Field trials and shooting have taken up all my spare time lately, and I have now for the first time a few spare moments to answer Mr. Stoddard and Mr. Kidwell's letters *re* Tick Boy and the Manitoba field trials. First let me thank them both for the sportsmanlike and moderate tone of their letters.

I can assure Mr. Stoddard that I need no refresher to recall the incident to my memory; what I saw, right or wrong, was Tick Boy going across wind, flush a bird—probably before he got wind of it—turn instantly and follow it at a fast pace. Mr. Stoddard of course knows his dog, but a stranger to him would be very apt to judge the act as he saw it, not on any past work of the dog, which of course he could know nothing about.

Of course my knowledge of prairie work is of a limited nature; still I have seen enough of it to know that marking is a distinct feature of it and a characteristic that some of the prominent trainers are developing in their dogs—and to my mind with doubtful advantage to them. Topsy's Rod pointed a covey, part of which flushed; he started after them, but only after watching them from a standing position. Avent called him back, when he pointed the balance of the covey. Again, he pointed a single outlying bird, which flushed; and he kept on pointing until his handler got up, and when ordered on started in a straight line after the bird, allowing Brighton Tobe, who was backing, to go up and point the balance of the covey.

Tick Boy certainly acted well during the balance of his work, showing no disposition to chase, nor on the other hand did he do any marking. If this sort of thing were to be continued it would be difficult for a judge to tell just where chasing ended and marking began. I suppose the only difference between a chaser and marker is that one chases with the object of flushing when he gets to the bird, and the other with the object of pointing it. If it is a good thing for a dog to mark, I suppose the sooner he starts and the faster he goes the better chance he will have of marking correctly. But as I said before, I think it a quality of very questionable value. One does not want his dog going half a mile away after a single bird when lots of birds may be close by. Of course skillful trainers are not slow to find out that a knowledge of where the birds are is quite an assistance to a dog in case of a flush or otherwise with the other dog at a distance.

I would like to hear from some of the gentlemen who were present at the trials and saw the piece of work in question as to what they considered it.

In answer to Mr. Kidwell as to why I did not throw Tick Boy out at once, I don't know that I can do better than give him an Irishman's answer: "How did I know what the other dogs were going to do?" W. B. WELLS.

CHATHAM, Ont.

### U. S. F. T. C. Trials B, All-Age Entries.

ENGLISH SETTERS.

LILLIAN RUSSELL—Jackson & Denmark Kennels' black, white and tan bitch (Phillip Gladstone—Lou G.).

SAM P. JONES—F. W Dunham's black, white and tan dog (Highbid—Nellie II.).

HOOSIER BOY—Jos. H. Hunter's black, white and tan dog (Antonio—Daisy Hunter).

DAISY HUNTER II.—Jos. H. Hunter's orange and white bitch (Antonio—Daisy Hunter).

BREEZE BELTON—J. H. Winslow's black, white and tan dog (Breeze Gladstone—Nellie Belton).

MINNIE T.—W. W. Titus's black, white and tan bitch (Dick Bondhu—Bettie B.).

ANTONIA—W. W. Titus's black, white and tan bitch (Antonio—Miss Nelly Y.).

BLUE RIDGE MARK—Blue Ridge Kennels' black, white and tan dog (Gath's Mark—Ollie T.).

ALLENE—Blue Ridge Kennels' black, white and tan bitch (Gath's Mark—Ruby's Girl).

BESSIE SHOUPE—Blue Ridge Kennels' black, white and tan bitch (Gath's Hope—Countess Rush).

SANDY GLADSTONE—S. Murray Mitchell's black and white dog (Breeze Gladstone—Delaware).

TORY SANDSTONE—F. R. Hitchcock's black, white and tan dog (Count Gladstone IV.—Tory Diamond).

TORY TOPAZ—F. R. Hitchcock's black, white and tan bitch (Count Gladstone IV.—Tory Diamond).

DAN'S LADY—Theo. Goodman's black, white and tan bitch (Dan Gladstone—Lilly Burgess).

BLUE KATE—Nat. D. Nesbitt's black, white and tan bitch (Blue Mark—Callie B.).

FLIRT C—Nat. B. Nesbitt's black and white bitch (Czar—Zoe L.).

AULD CLOOTIE—C. W. DePauw's black, white and tan dog (Dick Bondhu—Sheena Van(.

ACOLYTE—Dr. C. W. Duke's black, white and tan dog (Toledo Blade—Sue II.).

CAMILLE II.—D. G. Rowland's black, white and tan bitch (Roderigo—Topsy Avent).

BLUE DAN—Dr. G. Chisholm's black, white and tan dog (——— — ———).

AMETHYST—C. F. Joyce's black, white and tan bitch (Count Gladstone—Tory Diamond).

GLEAM II.—Maj. J. W. Renfroe's black, white and tan dog (Gleam—Tube Rose).

RODFIELD—P. T. Madison's black, white and tan dog (Antonio—Nellie Hope).

EUGENE T.—P. Lorillard, Jr.'s black, white and tan dog (Count Noble—Ruby's Girl).

IGHTFIELD ROSALIE—P. Lorillard, Jr.'s lemon and white bitch (Frid—Rosa).

BERYL—P. Lorillard, Jr.'s lemon and white bitch (Gladstone's Boy—Ruby S.).

BOSTONIAN—W. C. Shirrod's black, white and tan dog (De Soto—Ruth Gates).

JOE BOWERS—Dudley Schofield's black, white and tan dog (De Soto—Ruth Gates).

TOPSY'S ROD—Avent & Thayer Kennels' black, white and tan dog (Roderigo—Topsy Avent).

CYNOSURE—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Norah II.).

CLEMENTINA—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Norah II.).

GLEAM'S PINK—Manchester Kennel Co.'s black, white and tan dog (Vanguard—Georgia Belle).

GLEAM'S SPORT—Manchester Kennel Co.'s lemon and white dog (Vanguard—Georgia Belle).

POINTERS.

DOGWOOD—Charlottesville F. T. Club's liver and white dog (Ightfield Dick—Cowslip).

WILD DAMON—Charlottesville F. T. Club's liver and white dog (Damon—Flora).

SELAH—Charlottesville F. T. Club's liver and white bitch (Rip Rap—Dolly)

DELHI—Charlottesville F. T. Club's liver and white bitch (Rip Rap—Queen II.).

DON—D. P. Ritchey's liver and white bitch (Trinket's Coin—Moulton Patti).

ROMP III.—R. J. Martine's liver and white dog (Coney's Fritz—Dolly).

TICK BOY—Stoddard & Kidwell's black and white dog (King of Kent—Bloom).

STRIDEAWAY—E. O. Damon's liver aud white dog (King of Kent—Pearl's Dot).

KING OF LYNN—Robert Leslie's liver and white dog (Tempest—Nadjy of Naso).

LITTLE NED—W. N. Kerr's liver and white dog (Ridgeview Dazzle—Kate Claxton).

VERGE—C. W. DePauw's liver and white dog (——— — ———).

JINGO—N. T. DePauw's liver and white dog (Mainspring————).

HESSEN'S BOY—Louis McGrew's black and white dog (Duke of Hessen—Barmaid).

LAD'S LADY—L. W. Blankenbaker's liver and white bitch (Lad of Rush—Lady Margaret).

SPORT S.—Mr. McDowell's liver and white dog (Dick Swiveller—Vixen).

LADY MARGARET—Major J. R. Purcell's liver and white bitch (Dick Swiveller—Countess Bang).

SAM BANG—Major J. R. Purcell's liver and white dog (Dick Swiveller—Countess Bang).

ST. BLAISE—Major J. R. Purcell's liver and white dog (Guy—Lady Spotswood).

CID—Major J. R. Purcell's liver and white dog (Duke of Hessen—Barmaid).

LULA K.—G. R. Howse's liver and white bitch (Ossian———).

TAMARACK, JR.—H. K. Devereux's liver and white dog (Tamarack—Maud Graphic).

REX FAUST—W. B. Stafford's liver and white dog (Rex—Mosey).

HEMPSTEAD DUKE—Hempstead Farm Kennels' liver and white dog (Duke of Hessen—Lass of Bow).

P. T. MADISON, Sec'y.

INDIANAPOLIS, Ind., Nov. 25.

*The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

## EASTERN FIELD TRIALS.

### The Eastern Subscription Stake.

THERE were nine starters, every one of them either famous as winners or as competitors in other events.

Undoubtedly this stake is a better one, in respect to determining the true field merit of a dog, than the All-Age Stake, though it is not equal to the 4-hour race in its thoroughness. In the half-hour, or shorter, heats, the element of luck largely enters, for in that time a brace of dogs may run on a choice part of the grounds where birds are plentiful and easy to work, and in a good hour of the day. In a two-hour heat a dog must depend much on his own merit; for a great deal of ground, both open and cover, is worked over in two hours.

Some of the handling was from horseback and some was done afoot, as the handlers elected.

The order of running was as follows:

Maj. J. R. Purcell's black and white pointer bitch Lady Margaret (Dick Swiveler—Countess Bang), owner, handler, *with* Pierre Lorillard, Jr.'s black, white and tan dog Eugene T. (Count Noble—Trinkett II.), owner, C. Tucker.

Pierre Lorillard, Jr.'s, orange and white bitch Miss Ruby (Gladstone's Boy—Ruby's Girl), C. Tucker, handler, *with* Stoddard & Kidwell's liver and white pointer dog Tick Boy (King of Kent—Bloom), J. B. Stoddard, handler.

Avent & Thayer's black, white and tan dog Chevalier (Jean Val Jean—Lucy Avent), J. M. Avent, handler, *with* Charlottesville Field Trial Kennels' black and white pointer dog Rip Rap (King of Kent—Hops), C. E. Buckle, handler.

Avent & Thayer's black, white and tan dog Cynosure (Roderigo—Norah II.), J. M. Avent, handler, *with* Pierre Lorillard, Jr.'s, liver and white bitch Antevolo (Count Noble—Trinkett II.), C. Tucker, handler.

Avent & Thayer's black, white and tan dog Topsy's Rod (Roderigo—Topsy Avent), a bye, J. M. Avent, handler.

Rip Rap was clearly first. His heat was a most finished exhibition of what a good dog should do in working to the gun. His work was sound as a finding dog, and his point work on bevies and singles was accurate and intelligent. He worked his ground with excellent judgment, not in the long straight lines which seem to find favor with many sportsmen, but in intelligently working out the proper scope for shooting purposes. Take him all in all, as he is and as he has run year after year, he is, so far as I know, the best pointer that America has ever produced.

Chevalier ran the best race he ever ran in competition. He made a really good showing with Rip Rap, and, what he has not done in many of his trials heretofore, he did a great part of the work on his own judgment. He made a great showing as a finding and pointing dog, lacking somewhat in the wisdom and finish of Rip Rap, yet a close competitor with him. In seeking, he too exhibited excellence.

Topsy's Rod, running alone, with no competitor to make the pace or divide the work, made but a fair showing and was not worked hard; in fact, it appeared as if he was saved as much as possible from anything like a punishing heat. His point work was a bit faulty and much of his find was not from hard searching. The whereabouts of many of the bevies was known and the luck of the work favored him a great deal. Still, he won third, though I think he had a close competitor in Cynosure, undoubtedly the next best competitor in the stake.

This stake was open to all setters and pointers. The prizes were: First, $300; second, $150; third, $50. Fifty dollars subscription. Each subscription entitled the owner to start any dog he pleased, whether it was his property or not. It was transferable to any person not objectionable to the club.

#### MONDAY.

The first day of the second week of the trials was delightful and most favorable for work. A sharp frost had given a whiteness to the landscape, which gradually disappeared as the day advanced. The sun shone clear and bright. So far as the temperature is concerned, it was comfortable and not unfavorable for good work. However, the first two hours were the most unfavorable, the frozen crust making hard going, and the birds apparently were not moving about.

*First Round.*

EUGENE T.—LADY MARGARET.—They started at 8:19. While the first part of the heat was under unfavorable conditions in that the ground was frozen and birds were in cover, such would not excuse the bungling work done throughout the heat. It was a very inferior exhibition of field work. Eugene opened the work on birds by recognizing scent and roading about 40yds. by the bevy in sedge, then dropping to a point, or more properly lying down, for he showed none of the intensity of pointing. As Tucker went toward him he flushed two birds of the bevy, and not finding any birds to Eugene's point he brought him back to the bevy and coached him to a point on it. The birds flew but a short distance in the sedge. Eugene flushed twice in succession under favorable conditions to point. On marked birds he was coached to a point, and was steady to shot. He had opportunity on these birds without competition, as Lady had gone on searching on the course. About 9 o'clock he bolted or was lost and was gone about fifteen minutes. The work was inferior in every respect. Lady flushed a bevy and made six flushes on single birds, pointed one bevy and then flushed it; poineed two single birds, one of which she pointed and then flushed. Eugene pointed two bevies bunglingly, one point being in the middle of a bevy which flushed all around him, he made three points on single birds, one point of which Lady refused to back and stole the point, and he flushed four times. Moderate range and careless seeking.

MISS RUBY—TICK BOY.—This, too, was a poor heat, beginning at 10:22. In open weeds, Tick made game and ought to have pointed the bevy. His manner was not very convincing. His handler ordered him on and he flushed. Next he flushed a single in corn. Miss passed close by a bird which she ought to have pointed. Both at the same time pointed a bevy in corn. Tick flushed a bevy. Miss next pointed a bevy in corn. Miss was making game when a horseman accidentally rode up the bevy. Tick in open weeds pointed. Nothing found. Miss pointed a bevy and both were steady to shot. Next Tick roaded to a point on a bevy; Miss passed close by the bevy without recognizing scent. On the scattered birds, Miss pointed one in weeds and another at the edge of pines. Tick pointed, jumped in and flushed. Miss pointed a single and was backed. Ruby pointed well a bevy in a ditch and Ticked backed well. The bevy was followed. Ruby pointed one, next Tick flushed one and Miss chased it. Miss ranged moderately, but narrowed her range a great deal toward the close of the hest. Tick showed a great deal of ability in getting on birds, but needs more discipline in pointing properly for the gun. His range was fairly good.

CHEVALIER—RIP RAP.—They were started after lunch, at 12:50. Their heat was incomparably better than any other heat of the stake. It was a great working heat from start almost to finish. An abundance of birds were found, and the work was excellent. The handling, too, was better, as in most of the other heats there was a constant tendency to press the dogs too hard on scattered birds. Rip Rap started lame in a hindleg, but ran gamely on it and in a few minutes the lameness disappeared. Chevalier took a long cast up in a hollow in a cornfield, and pointed a bevy. Each got a point on single birds, and Rip afterward made two points, to which nothing could be found. He next, at edge of woods, pointed a bevy. Chevalier followed the scattered birds and pointed one. He next made three flushes. Rip made a barren point. He next took a long cast and pointed a bevy. Chevalier backed. Both were steady to wing and shot. Sent on, Chevalier flushed a single, then ran up wind into the rest of the birds and flushed them. The horsemen had ridden through the place a few moments before, which may or may not have had something to do with bad scent. Next Chevalier pointed and Rip a few feet behind backed. In pines, Rip got a good point on a bevy and three points on single birds, one point of which was well backed. Next, Chevalier got a point and a flush, each on a single bird, and next he got a barren point in weeds. Each at the same time made independent points on single birds. Some of the scattered birds on a side hill in weeds were next worked on. Chevalier roaded well to a point on them. In woods, Chevalier pointed a single and Rip, 50yds. away, found and pointed another bevy. Moved on a short distance and Chevalier pointed a bird and Rip at the same time pointed the scattered birds. Both close together pointed the same bird. Chevalier pointed a bevy in corn, and next a single in woods. Rip pointed a bevy in weeds. Next he going down wind flushed a bevy. In pine woods Rip got a good point on a single and afterward both pointed a single. Next both pointed a bunch of feathers where a quail had been eaten by a hawk. In woods on dry leaves, Rip next flushed a single, Chevalier close behind him at the time. Rip pointed a bevy in corn and was backed. In the last half hour nothing was found. Just after the dogs were ordered up and before they could be gotten in hand, Rip found and pointed another bevy. Both ranged well at good speed and did not show the least distress at the end of the heat. They beat out their ground well, Rip showing the better judgment. He was wiser in his bird work. Their range was wide enough as the results proved, and was an optical demonstration of the effectiveness of beating out the ground intelligently as compared with the dog which runs in straight lines or runs away. The heat was most vigorously contested by the two dogs and they were well handled. The advantage was with Rip Rap.

CYNOSURE—ANTEVOLO.—They were started at 2:54. Cynosure had a decided advantage over her older and more experienced competitor. She beat out her ground with better judgment and her point work was of a higher class, the quality of her work rating next to that of Rip Rap, Chevalier and Topsy's Rod. Antevolo pointed a bevy in sedge and was steady to shot. Cynosure was not near at the time. Sent on, Antevolo about 50yds. further on flushed a bevy. Cynosure made two flushes and next pointed a single well. Antevolo pointed a bevy, though not accurately, being upwind of it, and next she pointed a single. About 50yds. further on Cynosure pointed another bevy or part of the last one which had split, one part running further on. Both pointed a single, and next Antevolo flushed one. Cynosure next excusably roaded to a flush. Sent on and soon Antevolo pointed two or three birds by the edge of a ditch. Both were in weeds together, where a bevy flushed. Both flushed scattered birds in woods Both at the same time pointed a bevy and the birds flushed wild. On the scattered birds Cynosure pointed one in brush in ditch. She moved on about 20ft. and pointed two more birds. She moved on about 20yds. and pointed a single. Antevolo next pointed footscent. Cynosure pointed in brush and nothing was found. She was making game for some moments in sedge on a side hill, and Antevolo about 20yds. ahead flushed a bevy. On the scattered birds Antevolo pointed one and flushed twice. Cynosure found and pointed a bevy in woods and afterward pointed a single bird. Antevolo pointed, then moved on and flushed. Next she pointed a bird, which flushed wild, and next she made a good point on a single. There were quite a number of birds found in this heat. Both dogs were worked well at the finish, though Antevolo was showing the most signs of fatigue.

This ended the day's work.

#### TUESDAY.

Every condition was favorable for field trial work. The weather was mild and clear, a gentle breeze blowing and birds were in plentiful numbers.

TOPSY'S ROD, the bye dog, began a rather leisurely heat at 8:28. Mr. Avent had permission to run him alone or with another dog. He chose to run him alone. The heat was not so good as the results would seem to indicate, since on the part of the ground worked, everybody knew precisely within a few yards of where the bevies frequented and ought to be found. In such ground, it was practically going from one bevy to another, with very little to test the thorough searching powers of the dog. There was no competitor to find a part of the bevies or to hustle him in work on scattered birds, or to spoil opportunities by flushes. Nor was there any of the noise to distract his attention as there is when two dogs and two handlers are working. Taking into consideration the favorable morning, the absence of a pace maker and the thorough knowledge of birds and grounds, he had by far the easiest and softest place in the competition. Topsy took a long cast and pointed in sedge a bevy which he had some difficulty in locating. A few yards further on, he pointed where a bird had flushed. Next he pointed a bevy in weeds. The birds were followed. He dropped to a flush, and Avent flushed more birds ahead of him. Next he pointed a bevy at the edge of a cornfield and was steady to shot. Some new ground was next worked. In open weeds Topsy pointed a bevy. The birds were followed into pine woods; he got in among them and flushed. He next pointed in cornfield; nothing to it. Sent on again, he found and pointed two bevies which were not far apart in pine woods. Worked on the scattered birds, he pointed; nothing found. He pointed a single in pines and working in a ditch he made a difficult point on a single. In the open a bevy was seen to flush with Topsy suspiciously close to it. It was marked down in a washout where was a growth of thick brush. Topsy called in and sent on to the bevy pointed it. Some of the birds were marked down in open weeds. Topsy roaded on to a flush. Next he got a good point on a single bird. He was worked carefully for a half hour longer without finding. The character of his work was not uniform, and much of his work was not done on his own judgment, in that he was coached and assisted a great deal in locating and pointing, and directed in the manner of working out his ground.

His work ended the stake, as the judges very properly decided it without further running. The dogs had shown their relative merit quite as well in the long two-hour heats as if they had run further.

They were placed as follows: First, Rip Rap; second, Chevalier; third, Topsy's Rod.

### The Great Selling Stake.

This stake was next begun at the conclusion of the two-hour race. As a selling stake it was not a success, and as an exhibition of shooting dogs it did not rate high. It came, too, in wrong sequence, as nearly all the sportsman had departed elsewhere when it was run. It would seem a better time for it after the Members' Stake when the sportsmen were present. However, its support and the interest it excited were rather slight as compared with the value of the prizes hung up and the purpose of the stake.

Belle, a pointer, the winner of first, ranged wide, but showed a fondness for the easy going. She had fair success in finding and pointing.

Jess, a setter, won second. Her point work was superior to that of the winner, but she did not have the range or speed.

Lady Araminta, third, was but fair in either pointing or finding, and she did not show first-rate judgment in working her ground.

There were twelve starters, run in the following order:

J. W. Shriver's black, white and tan dog Jack Berwyn (Berwyn's Pride—Nettie G.), E. J. Myers, handler, *with* Maj. J. R. Purcell's lemon and white dog Flock (Staunch—Flake), owner, handler.

Pierre Lorillard, Jr.'s black, white and tan bitch Leona (Eugene T.—Belle of Hatchie), C. Tucker, handler, *with* Shriver & Myer's blue belton dog Mark H. (Count Rapier—Belle of Hatchie), E. J. Myers, handler.

T. H. Gibbes's liver and white bitch Belle (Rush of Lad—Topsy L.), J. H. Wilson, handler, *with* F. R. Hitchcock's black, white and tan dog Solitaire (Jean Val Jean—Lucy Avent), J. White, handler.

Luke W. White's liver and white dog Pop Grace (Rap of Pearl—Lady Grace), owner, handler, *with* Pierre Lorillard, Jr.'s black, white and tan bitch Lady Araminta (Eugene T.—Dell Rivers), C. Tucker, handler.

Col. C. H. Odell's black and white dog Pete (Roger Williams— ———), Luke W. White, handler, *with* F. R. Hitchcock's black, white and tan bitch Tory Jess (Count Gladstone—Molly), J. White, handler.

J. F. Gibbes's liver and white bitch Maud (Rush of Lad—Topsy L.), Joe H. Wilson, handler, *with* Maj. J. R. Purcell's lemon and white dog Sam Bang (Dick Swiveller—Countess Bang), owner, handler.

*Second Round.*

Leona with Belle.

Lady Araminta with Jess.

First, Belle; second, Jess; third, Lady Araminta.

Following are the conditions:

No dogs or bitches are eligible that have ever been placed at any open recognized field trial. Entrance fee $10. Starting fee is five per cent. of selling price, payable the evening before the running of the stake. A price, not to exceed $300, must be placed upon each dog at the time of the payment of the starting fee. The winning dogs shall be offered at auction by the club at 9 P. M. on the day of the announcement of the awards. Any surplus over the entered price to go to the club. Beaten dogs are subject to be claimed at entered selling price up to 10 P. M. of the same evening. In the event of more than one claimant for a dog, the ownership will be determined by auction between such claimants. A certificate of excellence will be given to all dogs showing merit as good shooting dogs, signed by judges, president and secretary of the club.

Prizes—First, $200; second, $100; third, $50.

*First Round.*

JACK BERWYN—FLOCK.—They started at 10:41 and ran till 11:18. Both were narrow rangers, and leisurely in their work. Flock passed close by a bevy, which Jack uncertainly pointed. Flock pointed a bevy in heavy cover; Jack backed. Both were steady to shot. In woods on scattered birds both made game. Jack made two points on single birds, Flock one, and both pointed jointly a single. Up at 11:18.

LEONA—MARK H.—They started at 11:26 and ran 36m. Mark pointed a bevy in weeds. Leona pointed two birds in switch cane. Mark flushed one. Mark pointed a bevy in woods. As Leona drew up, the bevy flushed. Leona pointed twice on singles in woods, Mark once. He backed well. Their range was less than middling.

BELLE—SOLITAIRE.—They began at 12:09. Belle pointed a bevy in open weeds. Solitaire was lost some moments and was held till she was found. Solitaire had a point on a bevy which he flushed. Belle pointed a single which Solitaire drew in and flushed, after which he flushed another bird. Both showed good speed and range, Solitaire not working well to the gun.

POP GRACE—LADY ARAMINTA.—After lunch at 2:04, they were cast off. Pop flushed one of the scattered birds marked down in the woods. Lady pointed a bevy in corn. Pop backed. Both flushed on a bevy in corn. Next, each flushed scattered birds. Both pointed a bevy, Pop somewhat unsteady on her point. Lady pointed a bevy and was backed. Up at 2:58. Neither remained steadily out at work and their range was but moderate.

PETE—JESS.—They were started at 3:05. Jess pointed a bevy. The birds were followed and Jess pointed them and made two points on singles, Pete backing each time. Pete stopped to a flush on a bevy. Up at 3:36. Jess was far the better on birds and ranged wider.

MAUD—SAM BANG.—The latter went lame. They started a 3:40. Sam pointed a bevy. Maud followed it and flushed at every opportunity. Up at 4:15. Sam was the better ranger and hunted intelligently, and acted as if he could give good results amongst birds. Maud kept at heel nearly all through the heat except when there was opportunity to flush and showed no signs of training.

*Second Round.*

Six were announced to run in the second series, two of which, Soltaire and Flock, were subsequently retired without further running.

LEONE—BELLE.—The heat began at 4:32. Leona pointed a bevy in weeds. She next roaded on a bird which flushed wild. On scattered birds each pointed and Belle roaded to a flush. Next Belle pointed, and Leona, cautioned, backed indifferently. Leona roaded a bevy in weeds and stopped to caution before she had the bevy located; at the same time Belle, 40yds. away, pointed the bevy. Each pointed a single. Leona stopped as scattered birds flushed. Next she made a point and a flush. Belle was much more accurate in pointing. Up at 5:18.

#### WEDNESDAY.

The weather was delightfully clear and pleasant.

LADY ARAMINTA—JESS.—Off at 8:56. Jess pointed a bevy in weeds. Lady coming in to back pointed the same bevy. On scattered birds, Jess pointed a single and Lady flushed it. Jess made two good points on siugles. Next Lady pointed, Jess backed; nothing found. A bevy was marked down, Jess pointed it. Up at 9:22. Jess was the better in every respect.

BELLE—JESS.—They started at 9:40. On scattered birds of a bevy, Belle pointed and Jess backed. Up at 10:25. Belle was the wider ranger in the open. In cover where there were briers or thick weeds, she showed dislike to work, and preferred the open going.

First, Belle; second, Jess; third, Lady Araminta.

Certificates of merit were given to competitors in the Selling Stake, as follows: Jack Berwyn, Leona, Solitaire, Flock, Sam Bang, Mark H. and Pete.

B. WATERS.

### Columbus Fanciers' Club.

*Editor Forest and Stream:*

At a recent meeting of the Board of Directors of the Columbus Fanciers' Club Co., the following organization was effected. President, A. T. Dempsey; Vice-President, Perry P. Smythe; Treasurer, Jas. A. Poston; Secretary, Geo. F. Mooney. The other members of the board are; Jas. A. Lawrence, H. A. Bridge, H. T. Schmitt, W. B. McCloud, Geo. B. Hische, and Jos. G. Fisher.

The club is in a healthier state now than ever before and failure to hold a show this season will be due to our inability to procure a suitable room in a desirable location. At present we are negotiating for a ground floor room situated on the most prominent block in the city and which will bench 400 dogs. Should we be so fortunate as to secure the room, we shall hold our show late in February or early in March

GEO. F. MOONEY, Sec'y.

COLUMBUS, O. Nov. 23.

At the great Southern Exposition, Montgomery, Ala., Nov. 16, Spratts Patent (T. Farrar Rackham in charge) were awarded a diploma for the best method of penning and feeding poultry.

## POINTS AND FLUSHES.

*[By a Staff Correspondent.]*

A reaction for the better seems to have set in to check the decline in field trial matters, judging by the interest manifested in the fall trials as compared with that of two or three years ago.

At the Eastern trials this was particularly noticeable. There were several of the club members present, which of itself infused much of the enthusiasm of past years. There was Mr. Duryea, the embodiment of perfect health, as one might imagine he would be after a season of yachting and yacht racing, and who seemed to have lost none of his liking for the dog and gun during his two years' absence from the trials. Competitor, judge and amateur handler, skillful in all, his absence left a void not easily filled.

Mr. F. R. Hitchcock, too, was present after an absence since 1892, and he, too, belonged to the little band who so silently and yet effectively guided the fortunes of the club; the band who overcame the obstacles and perfected the club action for competition.

There too were Messrs. Lorillard, Orr and Meares, all skillful and popular sportsmen, and last but not least Mr. Edw. Dexter, whose pointers have been gamely in the competition for many years, win or lose, though it is a pleasure to mention that his wins were many considering the odds against the pointer.

The field trials seem to be growing in favor with the ladies. At Bicknell, Ind. and at Newton, N. C., ladies graced and dignified the competitions with their presence. All the ladies rode well. At the latter place were Mr. and Mrs. E. F. Young, and Mr. and Mrs. McCorkle and Mr. and Mrs. W. B. Duncan, of New York. Aside from her charming personality, Mrs. Duncan distinguished herself by her skillful horsemanship. There were a few bad ditches with crumbly banks, and plenty of thickets and steep hills and bad bridges and rough ground, yet she guided her horse through without mishap where many of the gentleman had their horses floundering or down. A fall-down horse is hard to manage.

And, by the way, riding a field trial horse is quite different from riding one which is well kept and schooled, one full of strength and courage and trained to the saddle. The average field trial horse is schooled in handling cordwood or working in harness for all draft purposes. A saddle is put on him and he is expected to take the rider across fields. He does so in a plodding or erroneous way. But his harness gait still remains. The soft, heavy ground and ditches aggravate the unsoundness within his skin. He exhibits a tendency to fall without reason and to walk slow always. Some will step squarely into a ditch with the utmost nonchalance, and fall down with calmness and resignation. On hillsides others will go down tenderly, slowly and cornerwise, in an effort to humor bad joints and ancient blemishes. Thus it is no ordinary matter to induce a field trial horse to stand on his legs.

The judges handled the competition very skillfully, but made an oversight in not establishing a more decisive competition in the first series of the All-Age Stake. There was not sufficient data on which to make selections, and this imperfection made itself felt to the end. It is all right to run poor dogs thirty minutes, but the doubtful ones can be run longer and their standing established. B. WATERS.

### Beagle Shot.

*Editor Forest and Stream:*

I read with sincere regret Mr. John Bateman's letter in your issue of Nov. 24 regarding the cruel shooting of his two beagles. One of those dogs, Sedgewick, had a very warm place in my heart. I bred him, broke him and sold him to Mr. Bateman. I considered him the best hunting beagle I ever saw follow a rabbit. He was by champion Royal Krueger—Lill. A kind, affectionate dog, one that minded his own business and attended strictly to it.

It's a wonder to me that the brute who shot those dogs is allowed by Providence to inhabit this beautiful earth. The sooner such a man is taught a lesson the better it will be for such vastly superior creatures—dogs—not to speak of the human race. I trust the S. P. C. A. will take hold of the matter at once, also the National Beagle Club. I will give $5 toward a fund to prosecute the matter, and if that is not my share I'll give more. I call upon all beagle men to come to the front with cash and push this matter to the full extent of the law. C. S. WIXOM.

COVERT, N. Y., Nov. 23.

*Editor Forest and Stream:*

I noticed Mr. Bateman's letter on the killing of his two hounds. I had heard of the case before and thought it queer that no action had been taken, but am glad to see that the National Beagle Club has it in hand. In the meantime the S. P. C. A. ought to push this man that shot the dogs to the full extent of the law. Everybody around here would be pleased to see it done, for Mr. Bateman is not the first man that has been on that property and came away without his dogs. If a man takes that process of keeping people off his property he ought to be made to pay for it and sent to jail besides. A. L. H.

PRINCE'S BAY, N. Y.

*Editor Forest and Stream:*

It was with sincere sorrow that I read of the untimely death of Mr. Bateman's beagles, and especially Sedgwick, as he was a particular pet of mine. I bred and trained him. He had a fine, loving disposition, and was just as good a rabbit dog as ever lived. Can we not do something to make an example of the wretch who shot the dogs? I am about as poor as you can find them, but I will give $5 toward a fund to prosecute. The S. P. C. A. should take the matter in hand for humanity's sake. The N. B. Club should do all they can to help Mr. Bateman. And what a chance for the powerful A. K. C. to be of some practical benefit to dogs and men by prosecuting this being in the form of a man who let my dumb friend Sedgwick suffer as he did, but I fear the A. K. C. will think it is out of their line to do anything for dogs.

If Mr. Bateman's dogs trespassed and did any damage the owner of the land had his remedy; he could recover by an action at law. He would not shoot a cow that trespassed on his land, and I know that Sedgwick was worth more than the average Staten Island cow, but he had no moral or civil right to shoot the dogs. We had nearly such a case here; two beagles ran a fox on posted land; the owner of the land shot them, but when he found out what the law was he said the dogs were after his sheep, but no one believed him. The owner of the dogs got a judgment for the full value of the dogs, and you bet I put it high. The dog killer had to also pay all costs, and the judge gave him such a scorching that he has not got over it yet. J. OTIS FELLOWS.

HORNELLSVILLE, N. Y., Nov. 25.

**Chickens, Ducks and Geese**

are going to be very plentiful along the line of the Northern Pacific this season. Make your arrangements to go and get some of them. Send Charles S. Fee, General Passenger Agent, St. Paul, Minn., 4 cents n stamps for "Natural Game Preserves of the Northwest."—*Adv.*

## DOG CHAT.

It is expected that a dog show will be held at Winnipeg, Man., during the winter in connection with the Poultry Association's exhibition.

Mr. M. J. Finn, of Natick, Mass., who handicapped the whippets at the Country Club's meeting at Brookline, Mass., recently, intends to visit England. He starts on Jan. 1, 1895, in the interests of the Country Club with a view to purchase whippets for some of the members. He can also execute commissions for others who desire to own these little racing dogs, as his acquaintance with the whippet men on the other side is extensive and he can secure good ones at reasonable prices. It would seem from this that the sport has taken hold and it only requires such club men at the head of it to become one of our most popular country sports.

The Meadowmere Kennels have opened an office in the Corn Exchange Bank Building, 13 William street, New York, where customers will be able to transact all kennel business with the agent in charge.

The collie men had better look out for Chestnut Hill Kennels next spring. There is a world-beater to come out at New York show. He is a black, white and tan and is by Christopher out of a bitch by Gladdis (the sire of Sefton Hero) ex Roslyn Dolly. It is not generally known that Roslyn Dolly went to England on a visit to Gladdis. Mr. Jarret has sold the noted collie bitch Pitchdark, winner of many prizes in England, to Mr. C. Y. Ford, Kingston, Ont. She is in whelp to Christopher. The imported bobtail Nabob he has sold to Mr. J. Dougherty, Lotus, Ind.

Dr. Jarvis writes: "I have sold to Mr. W. W. Brown, of Springfield, Vt., the Irish setter bitch Rosamond, by Duke Elcho ex Romaine. She is one of the handsomest all-round Irish setter bitches in this country, and when shown in condition should do lots of winning. Mr. Brown has in Rosamond, that good field dog Henmore Shamrock and Onota Peg a trio of Irish setters that any man should be proud of."

Mr. W. H. Crossman, Jr., Bronxville, N. Y., lost from his home on Oct. 27 a black spaniel dog with small white patch on chest. Age, about 6yrs. Weight, about 30lbs. or over. Any information from the canine fraternity will be thankfully received, as the animal was a great pet.

Mr. A. Clinton Wilmerding and Mr. R. P. Keasbey were elected honorary members of the English Spaniel Club at a very large meeting of that club held at Crystal Palace in October.

Mr. George J. Gould seems determined to secure a kennel of pointers that will hold their own in any competition. In addition to his late purchase of Lady Gay Spanker and Miss Rumor he has just bought from Mr. Davey the noted Ridgeview Comet, Josie Bracket and Brighton Jone. Mr. Gould intends showing these next season. Mr. Gould and his kennel manager, Ed Warner, left for the South on Nov. 27, taking the new purchases along. These dogs are good fielders as well as bench show winners. We trust that Mr. Gould may be prevailed upon to run his dogs at the field trials.

Good Scottish terriers are selling well on their native heath. Mr. J. F. Smith, so long known as the champion of smooth St. Bernards, is casting an anxious eye on some of the best over the border. He recently bid $375 for the bitch Vision, owned by the Glamis Kennels, but they want $500.

The Seacroft Kennels have just sold three fox-terriers to go to Russia. They are Seacroft Duke, the winning Toronto and Danbury puppy; Starden's Nip, by Starden's King, and a sister to Duke, never shown. We hear good accounts of a Raby Pallissy—Damson bitch, that if shown will make her mark.

An important transfer of collies has just been consummated whereby the Woodlawn Park Kennels are now the owners of Woodmansterne Trefoil, by Champion Charlemagne out of Dorothy, litter sister to Christopoher; Conrad II, by Champion Charlemagne out of Sefton Grace; Hempstead Chief by Metchley Wonder out of Corisande; Ormskirk Julia by Ormskirk Chriss out of Blundellsand's Bessie; Hempstead Dorothy, by Woodmansterne Trefoil out of Green Mountain Maid, that made her sensational debut at the N. Y. show last spring. Also the bobtails Boxer III winner of many prizes in England, and Mayoress of Newport. Most of these dogs were brought over by Mr. Mortimer for the Hempstead Farm Kennels and their records are well known to all collie men. The Woodlawn Park Kennels by this purchase have materially strengthened their already good team of collies.

Messrs. W. J. Higginson of Rochester, N. Y. and J. C. Mahler, of Avalon, Pa., have entered into a compact to corner the bull-terrier prizes. They claim the kennel name of Rochester-Pittsburg English Bullterrier Kennels which is a thoughtful concession to the poor fellows who have to write out prize lists. Still we bear them no malice.

We do not think the owners of our large poodle kennels are paying much attention to their education as trick dogs. But this interesting phase of a poodle's intelligence should not be neglected. On Nov. 23, Al. Eberhart sold an eight months old poodle called Coots to Prof. Wormwood, a trick dog manipulator and on the afternoon of Nov. 25, Coots made its first appearance on the boards doing several tricks before a crowded house.

Mr. Geo. A. Buckstaff, we regret to learn, has lost his well known beagle dog Ilwaco by accidental hanging. Ilwaco was by champion Royal Kreuger out of champion Elf and bred by the Hornell—Harmony Kennels. As a field dog he was very notable, winning the All-Age stake and second in Derby at the Northwestern trials in 1893, and on the bench he had a second and third at Chicago and reserve at Toronto, 1894, to his credit. Mr. Buckstaff says: "Of my twenty odd dogs he was the favorite both as house companion and in the field. His jaunty style of hunting and his voice were a continual pleasure. No price that any one would pay for a beagle would have tempted me to sell him. So it goes, even our attachment for our dogs becomes so great that the loss of them makes us almost sorry we ever owned a dog." By-the-way, Mr. Buckstaff was elected a member of the State Assembly at the recent election. Our regrets for his loss are therefore mingled with congratulations for the honor conferred upon him.

ADVISORY COMMITTEE MEETING. — Official Verdicts.—A. K. C. *vs.* Howard *re* published letter written by him to E. B. Elliott. T. A. Howard is not an acceptable representative in the A. K. C. and the Columbus club must choose another delegate. Pacific K. C. *vs.* E. P. Schell. The P. K. C. to state its reasons for acquitting Henry Huber at the time of expulsion of E. P. Schell; Mr. Schell's suspension continues pending investigation. E. H. Morris *vs.* Danbury Agricultural Society; case not to be reopened. George R. Preston, Jr., *vs.* E. H. Morris. Charges dismissed and $10 forfeit returned. T. A. Howard *vs.* Louisville K. C. (appeal on award of handler's prize). L. K. C. sustained and the deposit of $10 forfeited. James Watson *vs.* B. F. Lewis. Charges in connection with the substitution of Gordon Leo B. for Duke of Wellington at Boston show. Charges dismissed. Reason—charges not made and filed in accordance with rules. A. K. C. *vs.* George Bell. Penalty of disqualification imposed for one year is extended without limit.

We regret to hear that the well known fancier Walter J. Comstock, of Providence, is breaking up his kennel, and places all his Irish terriers on the market. His advertisement will appear next week. His kennelman Billy Birch, so well known as a competent, steady and experienced terrier man, is now on the lookout for a similar situation. Mr. Birch is worthy of the highest recommendation.

### Macon Dog Show.

A SUCCESSFUL little show was held at Macon, Ga., Nov. 8. The entries numbered about 100. Pointers, setters, beagles, Scotch terriers and collies were about the best classes. The building was roomy and light, and the dogs were well attended to. Spratts Patent benches were used and the dogs fed on their dog cakes.

Mr. A. C. Knapp, the secretary, is a hard worker, and much of the success of the show was due to his untiring efforts.

T. Farrer Rackham judged all classes. The dogs from the Muscogee Kennels were shown in grand form and condition, thus greatly adding to the show.

Most of the best collies were out of coat, but were otherwise good.

The list of awards is as follows:

MASTIFFS.—OPEN—1st, R. E. Stead's Fred.

ST. BERNARDS (Reg. class).—1st and 2d, A. Bartling's Rare Sovereign and Princess Maude.

GREAT DANES.—1st and 2d, Muscogee Kennels' Prince Melac and Daniel.

GREYHOUNDS.—1st, Callen Battle's Rex; 2d, J. B. Corbin's Tiger.

FOXHOUNDS (Reg. class).—1st, H. Seavey's Buck R.—OPEN—1st, H. Seavey's Flora; 2d, J. R. Hudson's bitch.

POINTERS (Reg. class).—1st and 2d, Muscogee Kennels' Rex; 2d, W. D. Sandwich's Nellie.

IRISH SETTERS (Reg. class).—1st, Sunset Kennels' Sandy S.—OPEN—1st, L, Brown's Nellie.

ENGLISH SETTERS (Reg. class).—1st, Muscogee Kennels' Royal Paul; 2d, B. C. Jordan's Beaten Prince.—OPEN—1st, C. N. Woodruff's Don; 2d, Muscogee Kennels' Black Prince.

SPANIELS (Reg. class).—1st, S. C. Wurst's Jack; 2d, Miss K. Barrata's Maria.—OPEN—1st, Muscogee Kennels' Fritz; 2d, Miss K. Barrata's Don.

COLLIES (Reg. class)—1st, Roslyn's Mischief; 2d, A. Bartling's Cora II.—OPEN—1st and 2d, A. Bartling's Richard Plantagenet and Edith Plantagenet.

BULL-TERRIERS (Reg. class).—1st, Chris Sheridan's Jack; 2d, W. E. Hill's Nellie.

BEAGLES (Reg. class).—1st and 2d, L. Brown's Dixie and Flossie.—OPEN—1st and 2d, L. Brown's Ethel and Minnie B.

BLACK AND TAN TERRIERS (Reg. class).—1st and 2d, W. E. Hill's Barry and Stella.

SCOTTISH TERRIERS (Reg. class).—1st and 2d, L. Brown's Roger Rough and Rosa B.—OPEN—1st and 2d, L. Brown's Scottish Lady and Maid.

FOX-TERRIERS (Reg. class).—1st and 2d, Muscogee Kennels' Fox and Bata.

PUGS.—*Dogs:* 1st, Muscogee Kennels' Prince of Orange. *Bitches:* 1st, J. E Kerr's Nellie.

SPECIALS.

Pointers—Best kennel, Muscogee Kennels. Setters, Muscogee Kennels. Beagles, L. Brown. Scottish terriers, L. Brown. Best pointer bitch and pups, sire and dam registered, Muscogee Kennels. Best setter bitch ditto, Muscogee Kennels.

T. F. R.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*The Boss, Earl of Rossmore and La Belle Estelle.* By Eberhart Pug Kennels, Cincinnati, O., for pugs, tw dogs and one bitch, whelped Sept. 17, 1894, by Happy Toby (Spokane—Nellie T.) out of Cashier's Daughter (Eberhart's Cashier—Flossie II.).

*Sir Verne, Lord Verne, Tatters, Basko and Lady Verne II.* By Eberhart Pug Kennels, Cincinnati, O., for pugs, four dogs and one bitch, whelped Oct. 9, 1894, by Bradford Ruby II. (champion Bradford Ruby—Puss B.) out of Lady Verne (Joe II.—Maudie)

*Eberhart's Stunner, Vera and Thora.* By Eberhart Pug Kennels, Cincinnati, O., for pugs, one dog and two bitches, whelped Oct. 5, 1894, by Happy Toby (Spokane—Nellie T.) out of Mabel E. (champion Kash—Lady Thurmen).

BRED.

☞ **Prepared Blanks sent free on application.**

*Pinkie—Bradford Ruby II.* Mrs. Nettie Crout's (Cincinnati, O.) pug bitch Pinkie to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Oct. 22.

*Nora—Melac.* F. S. Anderson's (Chicago, Ill.) imported great Dane bitch Nora to Capt. Pabst's champion Melac (Morceau—Minca), Nov. 1.

*Peggy Pryde—Happy Toby.* J. M. White's (Brookvile, Pa.) pug bitch Peggy Pryde (Eberhart's Cashier—Flossie II.) to Eberhart Pug Kennels' Happy Toby (Spokane—Nellie T.), Oct. 31.

*Fanchon—Eberhart's Cashier.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Fanchon (Spokane—East Lake Virgis) to their Eberhart's Cashier (champion Kash—Lady Thora), Nov. 3.

*Tootsy—Bradford Ruby II.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Tootsy to their Bradford Ruby II. (champion Bradford Ruby—Puss B.), Nov. 3.

SALES.

☞ **Prepared Blanks sent free on application.**

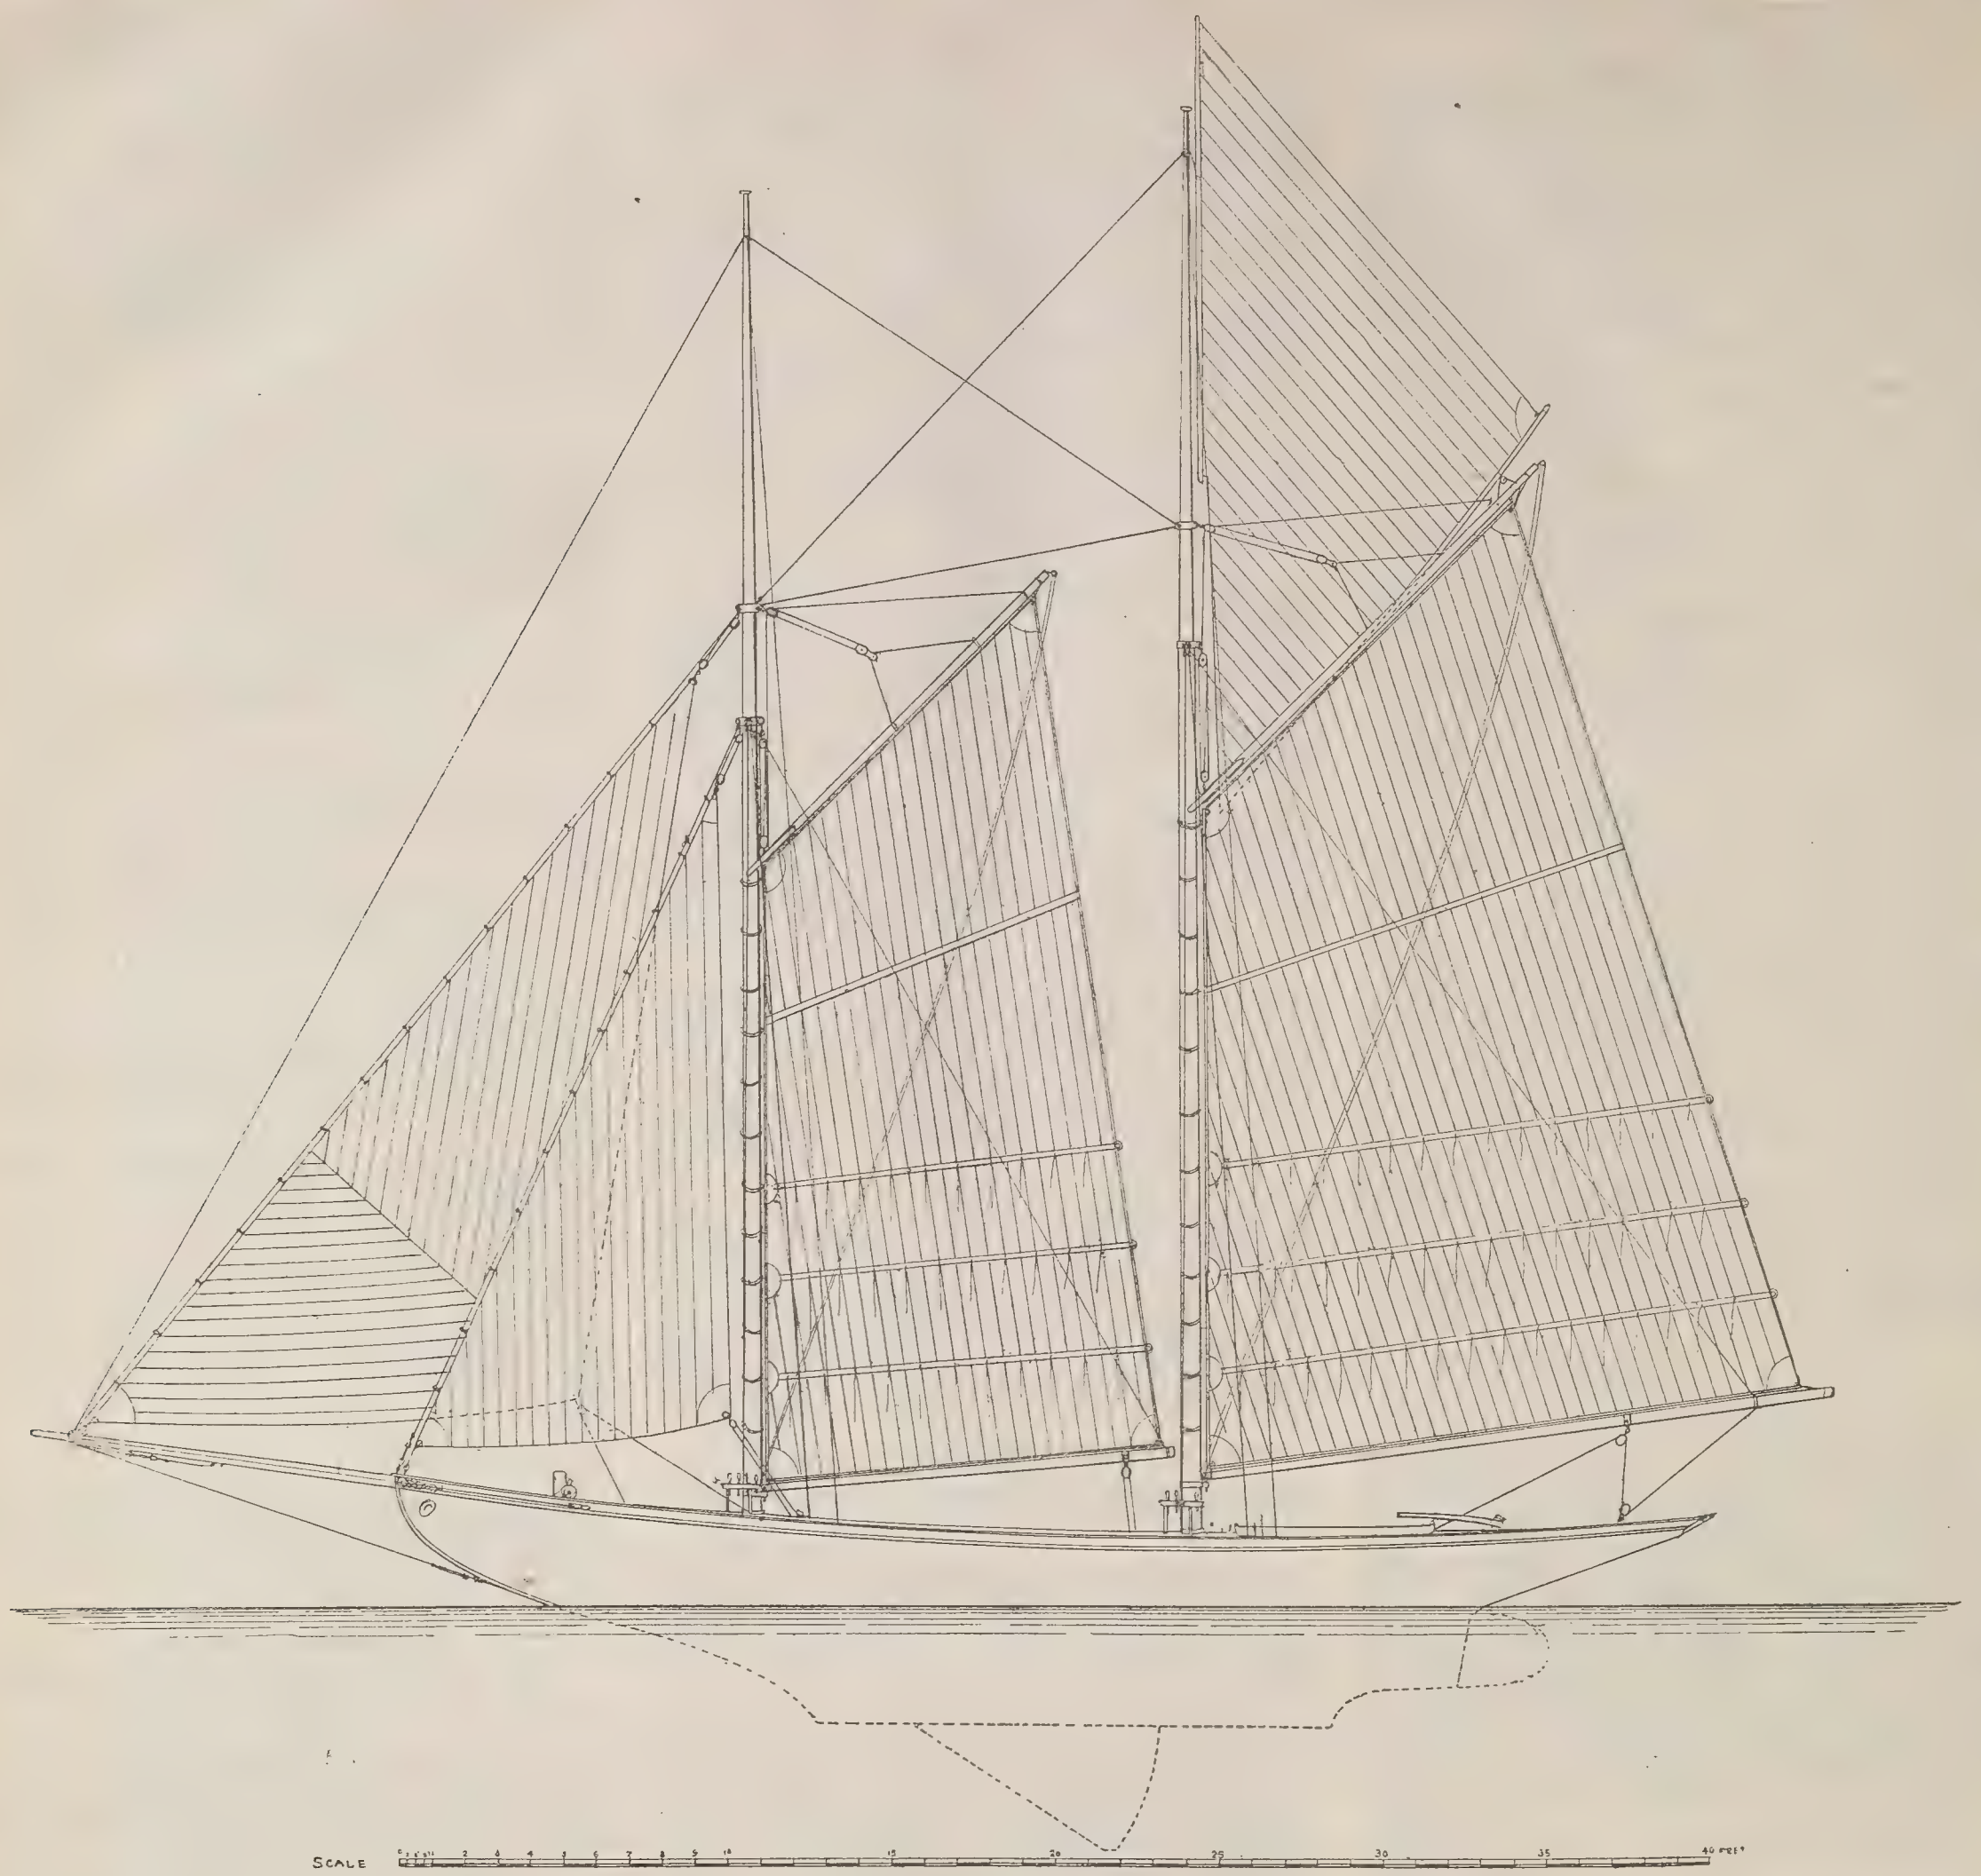
*Echo—Rosedale Bess whelps.* Black field spaniel dogs, by A. C. Wilmerding, New York city, one each to Geo. Warren, Saranac Lake, N. Y., and B. O. Chisholm, Orange, N. J.

*Black Duke—Madge whelp* Black cocker spaniel bitch, by A. C. Wilmerding, New York city, to A. G. Follett, same place.

*Commodore—Jane whelp.* Black cocker spaniel bitch, by A. C. Wilmerding, New York city, to C. J. Day, Plainfield, N. J.

*Don.* White bull-terrier dog, by Eberhart Pug Kennels, Cincinnati, O., to R. S. Woodrow, Hillsboro, O.

*Peggy Pryde.* Silver fawn pug bitch, whelped Dec. 4, 1890, by Eberhart's Cashier out of Flossie II., by Eberhart Pug Kennels, Cincinnati, O., to J. M. White, Brookville, Pa.



*Buttons.* Fawn Italian greyhound dog, by Eberhart Pug Kennels Cincinnati, O., to H. W. Browder, San Antonio, Tex.

*Young Douglas.* Pug dog, by Al. Eberhart, Cincinnati, O., to A. C. White, Brookville, Pa.

*Tootsy.* Apricot fawn pug bitch, by Eberhart Pug Kennels, Cincinnati, O., to J. M. White, Brookville, Pa.

### "Forest and Stream" Fan Pedigree Blank.

FOR some time past breeders of dogs have demanded a pedigree form that would afford spaces for a more extended pedigree than those hitherto published. The difficulty has been in arranging a form that, while admitting the required extension, would be compact and not too large for mailing. This difficulty has been solved in the "FOREST AND STREAM Fan Pedigree Blank" which is so arranged that a dog's pedigree can be recorded for eight generations, and the spaces radiating from a center, the reader is enabled to trace at a glance the different strains which lead from sire and dam. Spaces are also provided for recording the name of dog, its breed, color, sex, breeder and address, dates of birth and purchase, from whom purchased, E. K. C. and A. K. C. Stud Book numbers and certification. These blanks are for sale at $2 per hundred, 30 cents per dozen, by the Forest and Stream Pub. Co., 318 Broadway, New York.

SAIL PLAN OF SCHOONER PILOT.

# Yachting.

The account given by Capt. Diaper of the famous luffing match between Vigilant and Britannia accords exactly with the story we recently heard from a gentleman who was on board of the former. At the same time it completely refutes the silly and exaggerated stories cabled to this country at the time, of foul play on the part of Britannia in trying to force the American yacht ashore. What really happened was one of the boldest and most reckless luffing matches on record, Vigilant after several failures to pass to leeward, deliberately luffing in close under a rocky shore in order to get by her adversary; andthe latter, with even a greater draft of water, just as boldy following.

The conclusion of the interview, containing the charge that Mr. Gould had not yet discharged all of his obligations to Capt. Diaper, might well have been omitted in default of some corroborative evidence. It has since been denied by Mr. Gould and is most probably untrue. Precisely the same story was floating about the waterside a year ago concerning Lord Dunraven and his American pilot; but we did not consider it worthy of publication at the time, and would not give publicity to it now if we thought that any of our readers would believe it. If Capt. Diaper really made such a statement, it must be classed with the many groundless yarns that float about among sailormen and in nearly all cases are unworthy of publication or serious notice.

## The Chances of a Challenge.

The *Field* of Dec. 1 comments as follows on the reply of the committee to Lord Dunraven:

"The conditions which the New York committee have conceded to Lord Dunraven are most fair and satisfactory, and quite in accordance with the traditional elements necessary to make a fair fight. Whether the sailing length suggestion would have been of any advantage to the challenger, if adopted, is a very moot point.

"At any rate, it would be likely to leave the result of the contest very much to the chances of the weather, unless each side happened to choose the same length of waterline for a given rating. The committee's decision to allow the substitution of another yacht at the last moment is a most important concession. It is only in accordance with fairness and common sense that the challenger and the challenged should be governed by the same condition in this respect.

"The committee is rather on the fence on the question of holding the Cup under the deed, but we do not see that it matters much now what the new deed is like. The club has now interpreted the mutual arrangement clause in such a broad, liberal and sportsmanlike manner that the challenger will always be safely protected in the future as far as fair terms are concerned. Precedents are as good as written clauses.

"It can be taken for granted that nothing reliable will be made public about the form of the new challenger until the last moment. All the statements and rumors which have been current about dimensions and shape are as much nonsense as the rumor that Lord Dunraven and Mr. Watson disagreed whether they should have a fixed keel or centerplate. Lord Dunraven has been kept acquainted with the progress of the design, and he settled the dimensions on the receipt of the committee's letter.

"Lord Dunraven is staying at Adare, where he expects Mr. Watson to-morrow, with the drawings of the model. If the same be approved, he will order the building to be placed forthwith, and the challenge to be forwarded through the Royal Yacht Squadron."

The *Field* is in error as to the position of the committee. It is by no means "on the fence," but has come down to the only basis on which racing for the America's Cup can continue, that of an exact and definite understanding of the terms under which the trophy is now held by the New York Y. C. The phrase used by the *Field* very aptly applies to the evasion and compromise of 1892, based on the absurd interpretation of the mutual agreement clause, but the new committee has started in the right direction by sweeping away all the specious arguments which led to the Valkyrie-Vigilant races.

The easy-going way in which the *Field* accepts the new deed accords poorly with its fierce denunciations of a few years back. To any one who reads the new deed carefully, especially in the light of the precedent so persistently built up by the New York Y. C., that nothing save a challenge in due form can be recognized by the club as a basis for a mutual agreement, it will be plain that the "broad, liberal and sportsmanlike" interpretatation of the mutual agreement clause will not hold for a moment. The action of the New York Y. C. in accepting a challenge from Lord Dunraven in 1892 without the four dimensions was so irregular and contrary to the new deed as to furnish good grounds to any member of the club for objecting to the transfer of the Cup if won. The precedent then made was not only directly in the face of the plain wording of the new deed, but was opposed to long years of precedent, as repeatedly recorded in the minutes of the club.

The present attitude of the *Field* is identical with that of Lord Dunraven in 1892, so long as concessions are made on minor points, all question of principle will be waived.

From the latest reports from London, it is evident that there are still some British yachtsmen who are not so complaisant, and who have not yet forgotten the matter of the new deed and the manner of its adoption. Surprise is expressed that the New York Y. C. should have revived what was evidently a dead issue, but we have repeatedly pointed out that the complicated negotiations of 1892 were on a basis of mutual misunderstanding which absolutely precluded any final settlement of the international dispute over the new deed.

To us the reiteration of the cry of conditions of the Thistle-Volunteer and Valkyrie-Vigilant races is becoming very wearisome. Will British yachtsmen never understand that so far as the holding and challenging for the America's Cup are concerned, these conditions mean absolutely nothing; and further, that if Valkyrie had defeated Vigilant five times in succession, the America's Cup would not have been delivered to the Royal Yacht Squadron until that club had executed a legal paper distinctly binding it to hold the cup under the new deed of gift?

On Monday night a special meeting of the New York Y. C. was held to receive the report of the cup committee. Vice-Com. Brown presided, and the meeting was well attended, no less than twenty-five voting members being present. Sec'y Canfield read the report, embodying the letter to Lord Dunraven, already published. The report was adopted and a resolution was passed authorizing the same committee to continue in charge of further negotiations, and of the races, should a challenge be received.

On Tuesday a report was current that a challenge had been mailed from the Royal Yacht Squadron, but it lacked confirmation, and is probably without foundation.

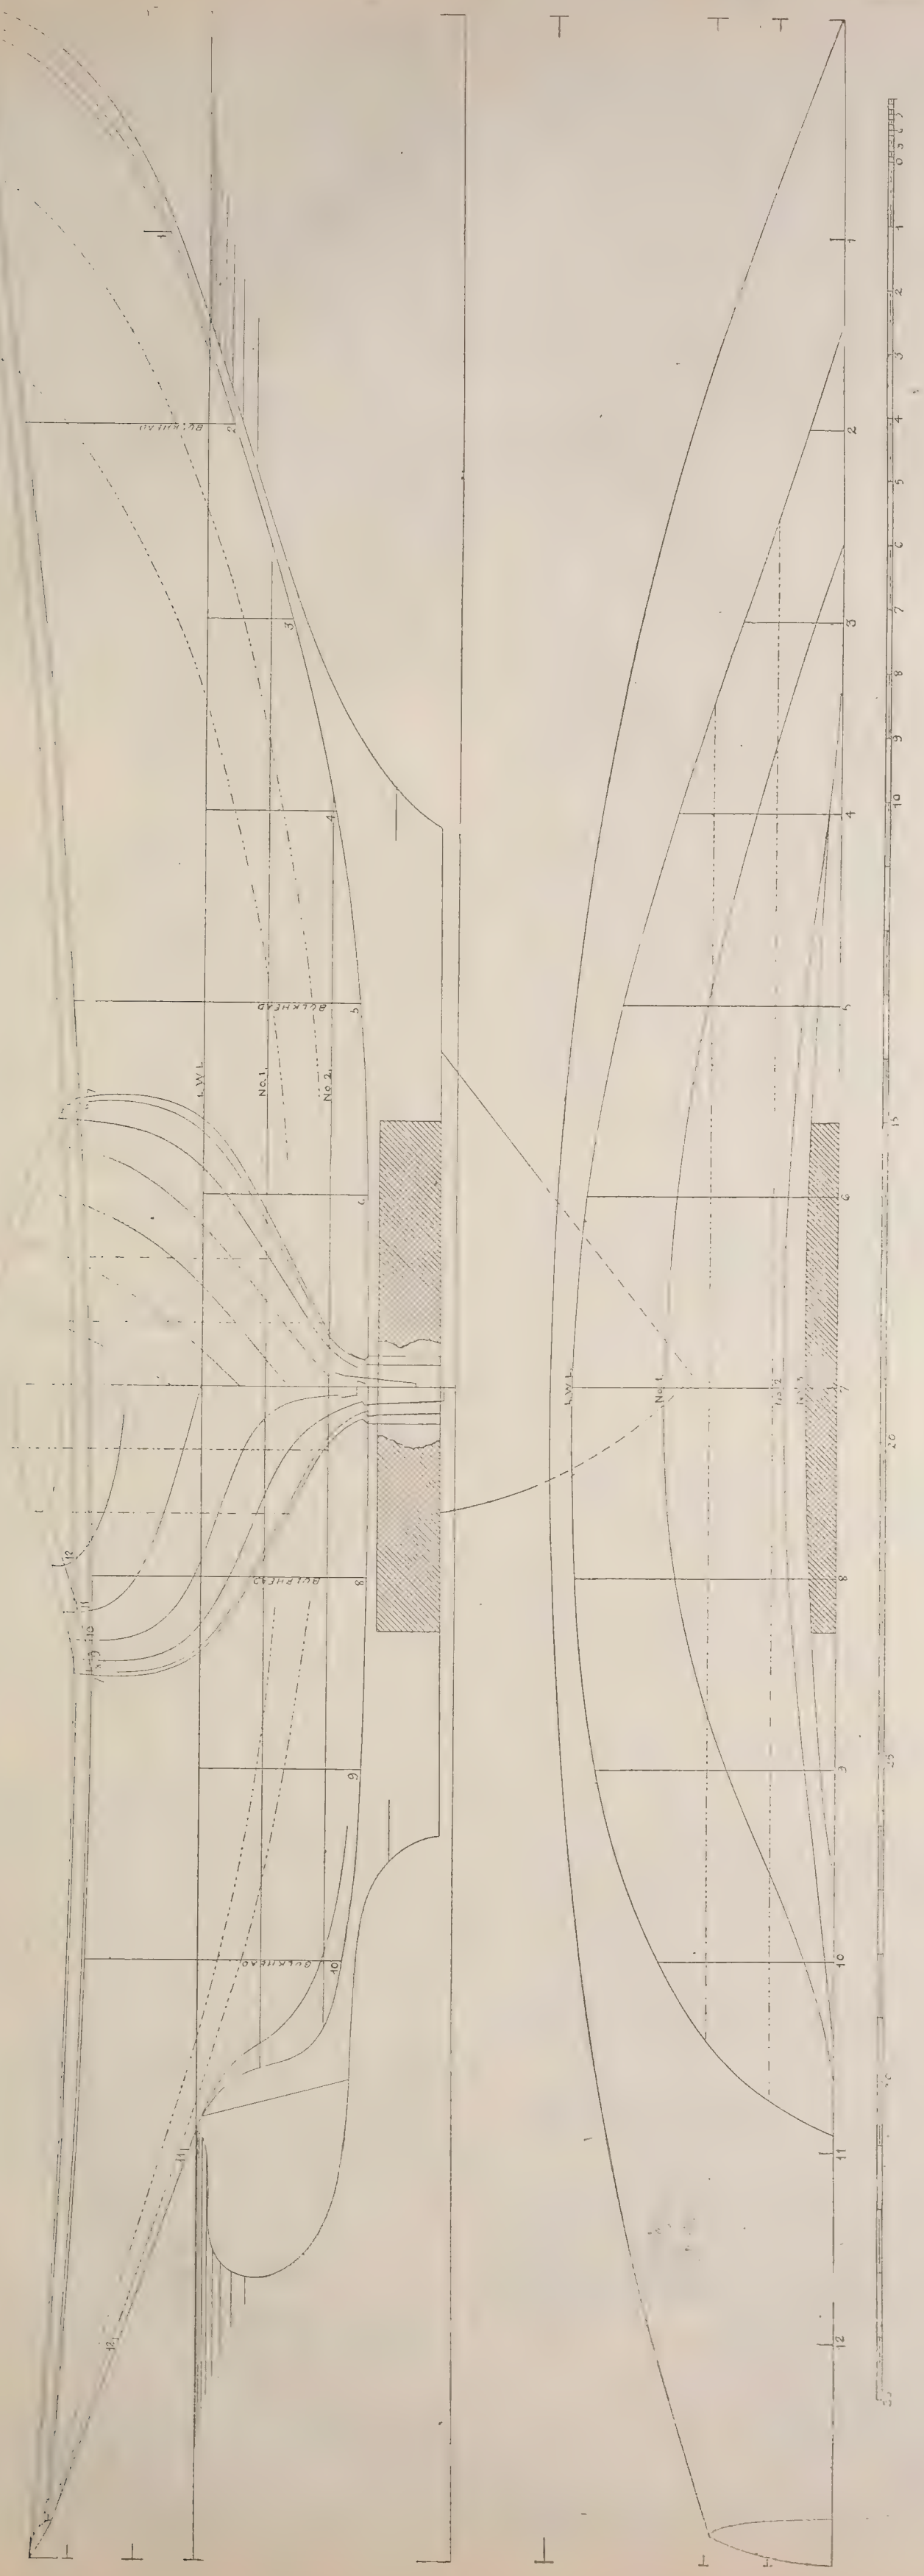
We understand, on apparently reliable authority, that the Herreshoffs are all ready prepared to build, and that the new yacht will be a keel craft, of less extreme forward proportions than Vigilant, but with very hollow section and practically fin keel.

## Pilot—A Small Racing Schooner.

The yacht herewith illustrated was designed by Mr. Richard P. Joy, of Detroit, Mich., one of whose designs, the "double cat" Squinx, we have already had the pleasure of publishing (Nov. 4, 1893). While the general preference in so small a craft is for a single-stick rig, the schooner is in common use about the Massachusetts coast, and has not a few adherents. The light draft of the design is a decided advantage in many localities; and at the same time the yacht is evidently well suited for open and exposed waters. The dimensions of the Pilot are:

| | | |
|---|---|---|
| Length over all | 40ft. | |
| l.w.l. | 28ft. | |
| Overhang, aft | 7ft. | |
| forward | 5ft. | |
| Draft | 3ft. | 8in. |
| Least freeboard | 2ft. | |
| Sheer, forward | 2ft. | |
| aft | | 8in. |
| Displacement, fresh water | 6½ | tons. |
| Lead keel | 2½ | tons. |
| Lateral plane, without board | 81.65 | sq. ft. |
| with board | .97 | sq. ft. |
| Lower canvas | 839 | sq. ft. |

The Pilot was designed for a cruiser and has comfortable accommodations for six people. She has proved herself a most seaworthy boat and a fast sailer in several cruises on the Lakes during the past summer. The hull is divided into five watertight compartments by four bulkheads, which greatly reduces the danger of sinking in case a hole is stove in the boat. Her hull is of solid construction, the keel, stem and sternpost being of oak. The frames also are of oak, steambent. The planking is double, of pine, inside ¼in., laid diagonally, outside ¾in.



This type of boat is usually slow in stays, as evidenced by the behavior of Vigilant. To overcome this fault the deadwood has been cut away aft in Pilot and she is remarkably quick in coming about.

The center of effort is so figured that she is perfectly balanced without the foresail or with the foresail alone, which is a great convenience in case of a sudden squall, as she can immediately be brought under shortened canvas without reefing.

The yacht was built by the Detroit Boat Works, being launched on July 21 of this year, just two months from the time her keel was laid. The work of construction was very thoroughly done, and the yacht has proved satisfactory in every way.

The navigation class of the Seawanhaka C. Y. C. will meet on Dec. 18 at the club house for a course of twelve or fifteen lectures, one a week, under Capt. Howard Patterson.

Marietta, steam yacht, H. B. Moore, has been sold to W. J. Arkell of New York.

"PILOT."—SCHOONER DESIGNED BY RICHARD P. JOY, ESQ., 1893.

## 'From Keel to Truck."

THE work to which the author, Capt. H. Paasch, has given this comprehensive title, though less known than it deserves in this country, has in the nine years that it has been before the maritime world become the standard marine dictionary of the English, French and German languages. The second edition, just published, is an enlargement and extension of the first, a quarto volume of 700 pages of text and plates, the revision including the latest developments of marine engineering. The book is a nautical dictionary and encyclopedia in three languages, English, French and German, arranged in three parallel columns. In the opening pages the ship or vessel is considered (1) as to material, wood, iron or steel, (2) as to type, (3) as to mode of propulsion and (4) as to rig. After the general subdivision of the subject resulting from the definitions in this chapter, each par-

READY FOR LAUNCHING—SCHOONER PILOT.

ticular branch is treated in detail, and at considerable length, first, the wooden ship, then the iron or steel ship, machinery, engine-tools and sundries, mechanical expressions, equipment, sundries and miscellaneous terms. Nearly 500 pages are devoted to the triple definitions, including every part and appurtenance of a vessel, as well as all the terms connected with navigation, shipping, marine insurance and the allied industries.

Capt. Paasch is qualified for the work he has so successfully carried out by a knowledge of the leading languages of the Continent and also by an experience of nearly fifty years, both at sea and as surveyor to Lloyd's Register for Belgium; so he has been able to avoid the errors of some writers, who, while familiar with a number of languages, lack the technical knowledge necessary to deal with such a complicated subject. Not only are the definitions complete and exact, but what is more difficult and important, the translations from one language to two others are free from the errors which so often accompany such work.

Following the definitions are tables of weights of material used in a vessel, and then the remainder of the volume is given up to the plates and accompanying descriptive. Beginning with the common wooden construction and continuing to composite, iron and steel, every detail of a vessel is illustrated and named. Excellent illustrations of

UNDER WAY—SCHOONER PILOT.

the various types of boilers, engines and screws are given, with details of all parts of the machinery. The details of the equipment, anchors, cables, boats, capstans, pumps and steering gear, are also fully illustrated. The different rigs of sailing and steam vessels and of small boats, from a five-masted barque down to a ship's pinnace, are explained by accurately drawn plates, with every sail and rope numbered for reference; and the numerous details of spars, blocks, cordage, etc., are also included. The utility of the work is materially increased by three separate indexes, one in each language.

If the good work of building up an American navy is to continue; and if, in the future, the work of creating an American merchant marine is to be begun, the most potent factor must be the realization by Americans, throughout the whole country as well as on the coast, of the general nature of the vessels of war, commerce and pleasure. To this end we wish that such a work as that of Capt. Paasch could be found in the public library or some educational institution of every town in the country; especially those where no other knowledge of ships and vessels can be had.

## YACHT NEWS NOTES.

Margharita, steam yacht, has sailed from Southampton for the Mediterranean, her owner, Mr. A. J. Drexel, sailing for New York on the Paris. He will join the yacht by steamer at Gibraltar or Genoa.

Iroquois, schr., R. N. Ellis, has been sold through Ashton Lemoine to H. G. Rouse of the Seawanhaka C. Y. C.

Suit has been brought in the Supreme Court of New York by C. C. Clark, owner of Idlewild, schr., against Bayard Thayer, owner of Constellation, schr., for $25,000 damages for personal injuries and $2,750 damages to yacht. The two yachts were in collision as the fleet came into Newport on Aug. 4, 1892, on the New York cruise, Constellation, while racing, striking the smaller yacht and unshipping her main boom, which flew forward and struck Mr. Clark in the head.

The St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y., is now working with a full force of men, and reports a large number of orders. N. S. Bowdish has been engaged as superintendent of the manufacturing department, and the company will probably use the Bowdish Patent Compressed Seam in planking some of their boats and canoes. Among the new orders are a 21ft. cutter of modern type for Mr. F. S. Christy of Rochester, N. Y., and an improved "Scarecrow" of 18ft. l. w. l., both designed by Mr. W. P. Stephens; also a half-rater racing bulb fin for a member of an English yacht club.

## New York Yacht Racing Association.

A meeting of the New York Yacht Racing Association called for the purpose of hearing the report of the regatta committee on the annual regatta sailed on Labor Day last was held at O'Neill's Nov. 23. The meeting was largely attended, all the members of the Association with a few exceptions being present. In the absence of the president and vice-president, Mr. George E. Gartland was elected to preside, Mr. George Parkhill acting as secretary. Some routine business had been transacted, such as reports from the treasurer and secretary being read, a nominating committee consisting of Charles E. Simms, Jr., of the Columbia Y. C., Frank M. Randall of the Pavonia Y. C., and Wm. Ross, Jr., of the Tower Ridge Y. C. were appointed by the chair. They are to make nominations and submit them to the clubs, members of the Association, before Jan. 1, the annual meeting occurring on the first Wednesday in February.

The report of the regatta committee was then called for and Com. E. Langerfeld, the chairman of the committee, said that as the treasurer of the committee was absent, they were not in a position to give a full report. This created much unfavorable comment among the delegates present, and it was asked why the meeting had been called if the committee were not ready to report. By general request the report of the judges to the committee was then read. This seemed to be the only matter the committee had, not having prepared any written report whatever. The winners as announced were the following:

Class D.—Æolus, Com. R. R. McMurray, Staten Island A. C.
Class E.—Lottie, J. E Drew, Hudson River Y. C.
Class F.—Forsythe, Alexander Roe, Jersey City Y. C.
Class G.—Bessie, Com. Garrett Van Horne, Jersey City Y. C.
Class 1.—Polly, A. M. Potter, Yonkers C. Y. C.
Class 2.—Clara S., J. M. Stilger, J., Hudson River Y. C.
Class 3.—Zetus, J. A. Kipp, Harlem Y. C.
Class 4.—Mary, Wm. E. Ellsworth, Bayonne Y. C.
Class 5.—Win or Lose, F. M. Randall, Pavonia Y. C.
Class 6.—Owl, A. Youmans, Yonkers C. Y. C.
Class 7.—Henry Dauer, O. A. Dougherty, Pavonia Y. C.
Class 8.—U and I. McGiehan and Woodruff, Greenville Y. C.
Class 9.—Frank, C D. McGiehan, Greenville Y. C.
Class 10.—Dead heat, between Cinch, F. W. Fabian, Bayonne Y. C., and Chip, E. J. Darvell, New Jersey A. C.

When they came to class 10 the chairman of the committee said that he did not know exactly what to say. The judges reported Chip, belonging to E. J. Darvell, and Cinch, the property of F. W. Fabian, to have made the same corrected time. The other members of the committee had left it for him to decide and he had decided it a dead heat. This decision was announced notwithstanding that both the owners had agreed to a remeasurement, and that such remeasurement was made by the treasurer of the Greenville Y. C. Such measurement showed a difference in the length of the respective boats, and proved one to have won the race. It seems to us that a committee composed of seven yachtsmen could certainly arrive at some conclusion, and it certainly does not speak well for the committee. Some years ago we had occasion to call the attention of the Association to the general mixing up caused where there are judges and an unwieldy regatta committee, and we thought the Association had profited by our advice, as for three years it has had an efficient regatta committee of three. It seems, however, that last year they went back in the same rut. In an association of this size it should not be a difficult matter to get an efficient committee together who would manage the regatta as it ought to be managed. Too many men as judges and on the committee are certain to do poor work. It is expected that at a future meeting of the Association some report may be submitted by the regatta committee. It was also said that the regatta committee might determine to refer the decision in class 10 for final action. The success of the Association to a great extent depends on the proper management of the annual regatta, and the results this year are not what they should be.

## The Pilot's Story.

The *Yachtsman* of Nov. 8 contains a long and interesting interview with "Tommy Dutch," or Capt. Thomas Diaper, late pilot of Navahoe and Vigilant. The experiences of over forty years' yacht racing make a story worth reading, but we can only quote that portion specially concerning the two American craft, as follows:

"Yes, I was appointed pilot of the Navahoe on the recommendation of Mr. Kersey, a friend of Lord Dunraven's, and I joined her immediately on her arrival at Cowes, and brought her up the Itchen. I had a very good time in her, and liked her owner, Mr. Royal Phelps Carroll, very much indeed."

"Do you think everything was done that could be done for Navahoe to win?" "Of course, she had a very bad suit of sails—her canvas might as well have been upon a barge. I believe her to be as fast a vessel as the Vigilant if she was properly canvased."

"You don't mean by that to infer that Vigilant is not a fast boat?" "Oh, good gracious, no! I consider the Vigilant to be the fastest yacht that has ever been afloat, and I believe that, if I had the handling of that vessel, with an English crew, I could go and beat the Britannia or anything else in British waters."

"You were pilot of her as well as of Navahoe?" "Yes, I joined her on her arrival in the Clyde, and piloted her in every race in which she took part."

"Of course, then, you remember the celebrated race round the Isle of Wight, when you and Britannia are said to have bumped on the rocks between Shanklin and St. Catherine's?" "Yes, and we did bump, and no mistake. We had gone so close in to Shanklin Pier, that any of us could easily have jumped ashore. We were on a full reach, and there was no need to go in so close, but then Britannia and we were luffing each other. I said to Hank Haff, 'Well, are we going to luff her on the shore?' A friend of Mr. Gould's forward—I forget his name*—heard this, and called out to Mr. Gould, 'Plenty more ships where this one was built.' He answered, 'Yes;' and then the friend said, 'What is it to be? Shall we take her through the Isle of Wight?' Mr. Gould rejoined, 'Let her rip.' Britannia then was on our port bow, our bowsprit end being on her weather quarter. I said to Mr. Gould, 'You will take all responsibility off me, sir?' And he replied, 'All right, Tommy.'"

"I suppose you knew it was far from being 'all right?'" "Yes, and I suppose he must have known it, too; but he was much excited, and was determined to pass the Britannia in some way or another. I went to the skipper and said, 'You have another man at the wheel with you, for I can tell you when you are going to strike, and you might have a chance of rushing off her lee quarter, but she (pointing to Britannia) will strike first.' The Prince of Wales' boat was just a little ahead of us, and those on board ought to have known the danger she was in, but, of course, all on board both vessels were nearly mad with excitement that day. I could see the rocks in the water just ahead of Britannia, and I said to Captain Hank Haff, 'Now, look out, she's going to strike!' And she struck first, as I had said, and she jumped over the rock as if she had been steeplechasing, and then the Vigilant did just the same. Both vessels jumped over into deep water, and then one of our men rushed below to see if she was making any water, and he called back and reported all safe. The two yachts then luffed, and luffed, and luffed, till they got nearly on the beach. Britannia struck a single rock and swung her head off, her bowsprit going under water, and then she slipped off again. Satanita passed her, but we got the lead. When we got nearly to the Needles, Mr. Gould's friend, to whom I have already referred, actually wanted the vessel to be sailed between the Needles and the cliff. He asked me if there was a passage there, saying 'it was wide enough,' and I replied, 'Yes, I've been through there.' He answered, 'Then we can go through?' I said, 'It was in a rowing boat.' He asked, 'How much water is there, Tommy?' I told him five feet, and then he scratched his head and seemed to think it was not enough. The attempt of course was not made, but it was a 'warm' time, I can assure you. We won the match, and run Britannia 8½ minutes from Alum Bay to Cowes Roads, and won the *Yachtsman* cup."

"Of course you remember the second time Vigilant 'bumped'?" "Yes, on the Saturday. It was a light, fair wind when we came out of Cowes Roads, and you would not dream that any man would have the centerboard down on such a time. When we got down a little distance I took the wheel, and steered as far as Hurst Castle. Presently Captain Haff took her from me, and soon afterward we were joined by Mr. Gould and General Knollys, the Prince of Wales's secretary. There was some difference of opinion as to whether the match should start to leeward or windward. I said to Mr. Gould, 'If you will listen to me, sir, this is just our point, going to windward.' And, after some conversation, it was agreed we should go, and he told the Prince's secretary we would start. I never knew all this time that the centerboard was down—I will swear to that."

"Was it down when you left Cowes?" "It appears they put it down as soon as we left Cowes, while they were messing about with the sails. As far as I know, the captain told the centerboard man to put it down, but he had never told me of it. When it was decided we should go out to race, we let draw, and set a course for the Needles to start, Britannia being ahead. Captain Haff asked me, 'We're going all right?' And I replied, 'As long as Britannia is to leeward you're all right, as she draws more water than you do.' We were on the weather quarter of Britannia, but all at once Vigilant bumped. I exclaimed to to the captain, 'Good God! what is that? Is the centerboard down?' He sad, 'Yes.' I replied, 'Why haven't you told me so? I'm the pilot aboard this ship, but I'm no good. I don't know when the board is down or up. I might just as well be out of the ship, and as soon as I get back to Cowes I'm going out of her.' The captain said, 'The centerboard is gone,' and sent his son below, and he came back and said he believed that was so. We made all clear and then got a rope over and swept the keel. It was finally decided the board was gone, and we signaled to the Prince of Wales accordingly. We bore up for Southampton, but when we got into the river we found that the centerboard was jambed in the keel. When this was put to rights we raced at Dartmouth and beat the Satanita, but we did not meet Britannia again, as she lost two men at Portland, and came back to Cowes, and we lost our centerboard when sailing up from Dartmouth to meet her in the contest for the Cape May cup, and had to abandon the race."

"Of course you have seen what some of the American papers have said about the English pilot of the Vigilant?" "Yes, I have; rather."

"And of course you see that it is insinuated the English pilot made the vessel come to grief?" "Yes."

"Well, what have you to say to that?" "You can tell the Yanks it's a lie." (Tommy used an adjective which I need not repeat.) "If they had listened to their English pilot they would have done much better than they did do with the Vigilant. I did my best all the time I was there; Mr. Gould knows that and admits it. For all or any of the mishaps I was in no way responsible. I knew some of them were going to happen, and they might have been easily prevented. The evening before the private match with the Prince of Wales Mr. Gould said to me, 'Tommy, if you win that prize to-morrow the money shall be yours.'"

"And you did win?" "Yes."

"Did you have the money?" "As soon as we got into Cowes he came and shook hand with me, and said, 'I congratulate you, Tommy; the money is yours!'"

"Have you got it?" "Well, I have not got it, but I hope to have it some day."

*Mr. Iselin

## "Laying Up" at San Francisco.

Last Sunday pretty much wound up the yachting season with the Corinthian boys at Belvedere, and many of the yachts were moved inside the bridge into Rashan's Lagoon.

The operation of raising the draw of the bridge to let them through was a Corinthian job as well, as that "draw" is a terror to flaccid muscles.

Under the superintendence of Frank Stone, assisted by about fifteen or twenty others, all bossing the job, heavy blocks and tackles were rigged to the uprights, and every available man and boy that came along was utilized and made to man the "fall" which was strung up along the bridge, and with a "heave, ho," and a surge the heavy draw was raised a few inches and then fell back. It was evident more muscle was required, and a conscription and draft was made on the yachts that gathered in a cluster waiting to get through. Their crews scrambled on to the bridge and laid hold of the "fall," and as some of the boys had good stern weight, it told; and after many "spells" and much shouting, the draw was up on end, and then commenced the scramble to get through.

Bob Gibson in the Magic and Will Brooks in the Witch were among the first, then came the big house boat Atlantis and she stuck fast in the draw. A miscalculation had evidently been made in her dimensions or in the width of the "draw." She was just about an inch too wide or the draw that much too narrow—whichever way it might be. For a full hour she blocked the way and all the tugging of several gasoline launches could not budge her; but finally some wise head discovered that, by cutting away a "batten" on the piles an inch or two could be gained, and it was done, when she started and moved slowly through, amid the cheers of the large crowd that had collected by this time. The big house boat being out of the way, the smaller ones in tow of launches hurried through and the smaller yachts in tow of their boats had a hard pull, as by this time the tide had turned ebb, and made hard work. However, all got through and the draw lowered to let the accumulated crowd cross the Rubicon.

It is a great pity that the bridge has not a turntable simplifying the passage of boats through. If such were the case, most of the yachts would remain in commission all winter, but as it is, the danger of lying outside renders it impossible, without great risk to the safety of the boats, as in a southeaster it kicks up a nasty sea; and the bottom being soft and the holding ground poor, the probability of being plastered up on the beach and being filled with mud and water, is not a pleasant prospect.

The Lagoon presents quite an animated picture with the numerous yachts and house-boats at anchor.

What a jolly idea it would be for the Belvedere Land Company to get Von Schmidt at work in the lagoon—dredge the shores and carry his pipes over the marsh, convert it into solid land, then lay out villa lots along the shore fronting on the deepened water. What lots of boat houses would be built and boats rowed by ladies—in fact, it would be a miniature Venice. It will be a great mistake to fill up the lagoon. It would pay better if deepened, and its shores lined, as would be the case, with villas and cottages. A water frontage is ever popular, and in this case for rowing and sailing it would be greatly so and profitable.

The lagoon would be worth more twice or even ten times over as water than as land. Land is everywhere, water available for any such purpose is not to be found. Think of it, ye grasping owners of the land and water over there. There is money in it, and so, I say, that lagoon can be made the most attractive and profitable scheme yet struck. It would beat the Lurline Baths or any other water scheme to be devised.—*Old Yachtsman, in Field Sports, Nov. 3.*

## London Sailing Club Model Competition.

We have received from Mr. George Terrell, honorary secretary of the London Sailing Club, the following particulars of the model competition and exhibition to be held at the club house, Lower Mall, Hammersmith, from Feb. 19 to March 2, 1895. The competition is open to American yachtsmen:

The success of the popular 1 and 0.5 rating classes seems assured for next season, and the time may be said to have arrived for the club to repeat the experiment of former years, and to announce another exhibition of models. As, however, there is a strong probability that the rating rule will be altered, it is felt it would be better to defer such exhibition of class models for another season, as hardly any useful purpose will be served until the new rule has been passed.

The London Sailing Club has therefore decided to hold an exhibition and competition for half models and drawings of singlehanded cruisers.

By the term singlehanded cruiser is meant a craft not exceeding 30ft. over all, capable of being navigated singlehanded in open waters, such as the lower reaches of the Thames, and providing cabin accommodation for her crew.

Mr. Dixon Kemp has kindly consented to act as judge, and will award the prizes.

Following the precedent adopted in the former exhibitions held under the auspices of the club, for the purpose of equalizing the chances of amateur designers in competing with professionals, the finish of the models will not be calculated as an element of merit in awarding the prizes. For the protection of professional designers all models and designs entered for the exhibition will remain the property of the persons exhibiting them, and no one will be allowed under any circumstances to take any measurements, except the judge for the purpose of judging.

A member of the committee of the club will be present throughout the time the exhibition is open, to insure the strict observance of this restriction against taking measurements.

No exhibitor may in any way whatever disclose his identity either on his models, drawings, or particulars, until after the judging has taken place and the prizes been awarded, and no exhibitor will under any circumstances be awarded a prize in respect of any models or drawings on which his name or identity, except in the sealed envelope, is in any way disclosed.

Entry for the competition must be made by application in writing of the honorary secretary of the London Sailing Club, and on payment of an entrance fee of 5s. for each model proposed to be exhibited, a card for each proposed exhibit will be furnished containing the exhibitor's name and address. No application for entry will be received after Tuesday, Feb. 5, 1895.

The models packed in a box containing the drawings and measurements hereafter referred to, and also the entrance card inclosed in a sealed envelope marked "Entrance Card" must be delivered at the club house, Lower Mall, Hammersmith, on or before Friday, Feb. 15, 1895.

The honorary secretary will, on receipt of the boxes containing the models, mark in the order in which they are received a number on each model, drawing, and sealed envelope, for the purpose of identification. The sealed envelopes will not be opened until after the prizes have been awarded.

REQUIREMENTS.

1. A half model of hull of singlehanded cruiser not exceeding 30ft. over all, scale 1in.=1ft.
2. Sail plan showing center of effort, scale ¼in.=1ft.
3. Cabin plan, scale 1in.=1ft.
4. Section at fore bulkhead of cabin. Scale do.
5. Section at aft bulkhead of cabin. Scale do.

The following drawings and particulars may also be deposited with the model:

6. Sheer plan, scale 1in.=1ft.
7. Body plan. Scale do.
8. Half-breadth plan. Scale do.
9. Centers of buoyancy and lateral resistance to be marked on sheer plan.
10. Displacement.
11. Weight of proposed ballast inside and on keel.
12. Details of cabin fittings and rigging.
13. Material of centerboard (if any) and manner of working it.

All drawings intended for public exhibition must be on one sheet of paper, and it is requested that such sheet of paper be of a width that it can conveniently be hung underneath the model.

Owing to want of space to exhibit them, no rigged models can be accepted.

The drawings and particulars, Nos. 6 to 13 inclusive, are required by the judge to enable him to form a correct estimate of the models. Supplying them is, however, optional on the part of the competitors, but they must understand that the merits of a design may fail to be observed if a model, cabin, and sail plan, only are placed before the judge. A competitor may, however, inclose such drawings and particulars in a sealed envelope, and mark the same for the use of the judge only, in which event the drawings and particulars will be produced to the judge at the time of his making the award, and afterward sealed and returned by post to the competitor.

The order of merit will be ascertained by the award of points, and the following table will show the heads under which points will be awarded, and the maximum number respectively obtainable thereunder:

(*a*) Hull.....50 points.
(*b*) Sail plan, rigging and fittings.....25 points.
(*c*) Cabin and accommodation.....25 points.

The club will give a first prize of seven guineas to the boat scoring the highest number of points under the three heads, according to the judge's award.

A second prize of four guineas.

A third prize of one guinea.

And also such certificates of merit as the judge may award.

The committee of the club will take every possible care of the models and drawings of the exhibitors, but they undertake no legal liability whatever for any loss or damage.

The decision of the committee, except in the award of prizes, in all matters of dispute arising out of the competition and exhibition will be binding and final on all exhibitors.

The exhibition will be opened on Tuesday, Feb. 19, 1895, and remain open until and including Saturday, March 2, 1895, between the hours of 2 and 9:30 P. M., Sundays excepted.

Admission free.

Any further information desired will be furnished on application to the Honorary Secretary, London Sailing Club, Lower Mall, Hammersmith.

# Canoeing.

The incoming regatta committee of the American Canoe Association, taking office last month, is confronted with a most difficult and unsatisfactory task. By a vote of the executive committee, the regatta committee is instructed to devise and put in practice a system of handicapping which shall revive the waning interest in canoe racing; The difficulty of the task becomes apparent when we consider that no practicable system of handicapping has ever been found in canoeing; and that even in yachting, where handicaps have always been the custom, many serious disadvantages exist for which no remedy can be found.

The rather lengthy discussion which preceded the adoption of the resolution developed an unanimous opinion that something was necessary to revive the racing, and an opinion almost as ananimous that the only practicable remedy was a system of handicaps. When it came to the rather important question of detail, however, out of the many indefinite schemes suggested, not one was free from serious objections, and it may be said that in this respect the discussion was void of practicable results.

The only point definitely agreed on is one which is not likely to be of much aid to the committee—that the handicap should be arranged on the basis of time in starting, and not by calculations made after the finish in order to determine the winner.

The regatta committee has already commenced work on the programme and other arrangements for the races of the '95 meet, but at the outset it is at a loss as to any practicable means of carrying out the instructions of the executive committee. In order to obtain suggestions that may aid, we shall be glad to give space to letters from canoeists, and invite such a discussion of the question as may bring out detailed plans rather than crude and indefinite suggestions.

It is the racing men, old and new, who are to be benefitted by the work of the committee, and it is from them that any discussion must come.

In the present condition of canoe racing, both in the clubs and at the meets, almost any change must be for the better, and an arbitrary handicap may well be tried for a season. At the same time we have no idea that however successfuly managed, it will bring back a fleet such as was seen even three years since; or that it will escape a great deal of unfavorable criticism. The establishing of handicaps and the placing of each man involves no small amount of responsibility on the members of the committee, and is likely to call down on them the criticisms of individuals who consider themselves unfairly treated, and of canoeists in general should the scheme fail of securing large fields of starters.

One panacea for all the ills of racing has been advocated for some years, the limitation of sail to a comparatively low figure. Should this be done, however, it is likely to lead to worse evils. For the first or second year, while the present craft raced with moderate rigs, the anticipated result might be realized; but it would not be long before some keen canoeist would build for the new conditions, putting under his rig of 100 or 125ft. a hull cut away in all directions. Whatever may be urged against a boat of good body, such as Wasp, Bee or Toltec, carrying 180ft. of sail; she would be a better craft than one o reduced freeboard and midship section, barely enough displacement to float her crew and rig, and standing up no better under 125ft. than the other under 180ft.

## CANOE NEWS NOTES.

We learn from the *Yachting World* that Mr. William Willard Howard has sent his canoe Yankee back to this country to have her forefoot cut off, and also that he may go into the half-rating class on the Solent next year in a boat of the Spruce type.

A correspondent writes to learn of a route for a canoe cruise from Dunkirk, N. Y., through lakes Ontario, Huron and Superior, and thence by the Ogoke and Albany rivers to James Bay, Ontario. Possibly some of our readers on the Lakes or in Ontario may be able to furnish information.

# Rifle Range and Gallery.

### Schlicht Rifle Club.

West New York, N. J., Nov. 27.—The Schlicht Rifle Club held its weekly gallery shoot for clahs medals as its headquarters last evening. Scores: Geo. Schlicht 241, Jacob Diehl 236, Geo. Dorr 232, Fred Krokatsch 231, Geo. J. Goehrig 214, Gus. Tribout 214, Jacob Schlicht 225, Geo. Reichert 225, Fred Lambrix 227, Conrad Schlicht 203, W. Schlicht 227, Geo. Lautenberg 222, Capt. S. Dedrick 228, Aug. Meyer 229, Wm. Last 202, Charley Meyer 204. Medal winners, Geo. Schlicht, champion medal; Jacob Diehl, first class medal; Fred Lambrix, second class medal; Capt. J. Dedrick, third class medal. F. Lambrix, Sec.

## Dorrler and Busse Defeat Ross and Martin.

CYPRESS HILLS PARK, L. I., Nov. 29.—The two-men team match between M. Dorrler and R. Busse against F. C. Ross and I. Martin, 100 shots per man, was shot off on this range to-day. As was recorded in FOREST AND STREAM at the time, this match was the outgrowth of the champion match which was shot here on Election Day.

Messrs. Ross and Dorrler are conceded to be the two best shots in the East, if not in the country. Messrs. Busse and Martin are two good shots with a limited experience, each of whom has the proverbial "bee" in his bonnet. The insects in these particular bonnets have in the past made these worthy shooters somewhat restless as to their position in the ranks of our local marksmen, and the result is that the two have on several occasions had an inclination to reach out for some other shooter's fame and gelt. Their experience to date is much the same as that of shooters of longer service who have traveled the same path. If they have not succeeded in catching on to the fame and gelt, they are at least accumulating a fund of experience. In this instance Busse seems to have gained a lap on Martin.

Rifle shooting with the thermometer below the freezing point is not of such a warm nature as to keep one's circulation at fever heat, and as the weather conditions on the day of this match were of a frigid nature, the four competitors engaged in the contest were at times compelled to seek close relations with the red hot stove, which was glowing in its efforts to keep Jack Frost from gaining full possession of the shooting house. Messrs. Ross and Dorrler, upon whom the interest of the spectators assembled in the shooting house were principally centered, shoot in fairly good form. Ross's shooting was nearer to his average than Dorrler was to his. The latter, by his uneven scoring, shows that he is not the Dorrler of old. However, the old veteran has got a deal of shoot left in him yet.

Martin's shooting was a disappointment to himself, for in a practice match some days previous he was enabled to make an average of 21 in 100 shots. He was handicapped in the match by not using his palm rest, which was permissible under the rules.

At the finish of the first half of the match Dorrler and Busse were leading by 37 points. At the ninetieth shot they had increased their lead to 62 points. Seeing the impossibility of overcoming this lead Martin retired from the contest with the close of his ninth score.

The others finished their scores. Ross's average for the 100 shots was 21.8, Dorrler's 21.5, Busse 20.4, Martin (90 shots) 19.3. The conditions of the match called for 100 shots per man, Schuetzen Bund rules, stakes $50 a side, weather clear and cold, with light westerly winds. Scores:

## Zettler Rifle Club.

NEW YORK, Nov. 28.—The attendance at the weekly gallery shoot of the Zettler Club last night was hardly up to the average. There was the usual quota of high scores made, however. In the competition for the champion medal for the best score on the first entry, Louis Flach came to the front with 246, beating Walter and Dorrler one point each. The best score of the night was also made by Flach, 248. Dorrler was second with 247, Holges, Walther and Engel tied with 246 each.

The competition for the best five scores developed a close race between Dorrler and Flach. Dorrler got the verdict by one point. Scores:

Champion medal: L. Flach 246, M. Dorrler 245, B. Walther 245, B. Zettler 243, H. Holges 243, F. C. Ross 241, C. G. Zettler 240, M. B. Engel 240, Gus Nowak 238, H. D. Muller 237, G. W. Downs 236, S. Buzzini 228, A. Klein 220, H. Munz 211.

Five best scores:

| | | | | | |
|---|---|---|---|---|---|
| M Dorrler | 245 | 247 | 245 | 247 | 247—1231 |
| L Flach | 246 | 245 | 245 | 247 | 248—1230 |
| H Holges | 243 | 245 | 245 | 243 | 246—1222 |
| F C Ross | 241 | 239 | 242 | 243 | 244—1209 |

Best 10 shot score: Louis Flach 248, B. Walther 246, M. B. Engel 246, B. Zettler 243, Gus. Nowak 240, S. Buzzini 240, H. Munz 233, M. Dorrler 247, H. Holges 246, F. C. Ross 244, C. G. Zettler 240, H. D. Muller 239, G. W. Downs 236, A. Klein 228.

## Greenville Rifle Club.

GREENVILLE, N. J., Nov. 30.—There was the usual gathering of the members in the club house this evening to participate in weekly competition for class prizes. The appended scores were made: First class—Robidoux 239, Collins 239, C. Boag 233, J. Boag 241, Purkess 237, Scheeline 241. Second class—Agneau 233, Chase 226, Chavant 237, Spahn 232, Charlock 238. Third class—Hill 221, Holzapfel 224, Renker 216.

## RIFLE NOTES.

There was a meeting of the delegates of the National Rifle Association (Schuetzen Bund) at headquarters, No. 12 St. Mark's place, on Friday night of last week. It was decided to celebrate the laying of the corner stone of the new shooting house in Glendale Park on Dec. 19. The delegates will assemble at the ferry house, East Thirty-fourth street, at 1:45 P. M. on that date, and take the train via Long Island Railroad to the park.

The Elite Schuetzen Corps, Captain Walters, joined the National Association at the last meeting, Nov. 30. The corps contains 100 members. Ignatz Martin is shooting master.

The Philadelphia Verein applied for admission to the Association with a membership of 25 shooters. What has become of the Philadelphia Verein? Surely it has gone into decline if 25 members constitute its present membership.

The New York Corps, Capt. Henry Offerman, will hold its bimonthly gallery practice on the Zettler ranges on Friday night of this week. Capt. Offerman's popularity was made prominent at the annual ball of the corps last week, when he was presented with a diamond stud whose luster would pale the glow of one of Edison's latest efforts.

While celebrating the Dorrler-Busse victory over Ross and Martin on Thursday night the men composing the two teams arranged for a return match to be shot off in the early spring.

W. C. Collins, of the Greenville group was put to sleep in the club house one night last week through the heated arguments of two cranks over the relative merits of patched and lubricated bullets. Collins says that as his memory faded there was some talk of leaving the decision of the matter to FOREST AND STREAM. We must protest against being made the "buffer" in this case else FOREST AND STREAM and its readers as will grow weary.

H. M. Spencer, of Dunmore, Pa., was a visitor to New York last week. He was an interested witness to the Dorrler-Busse and Ross-Martin match. Mr. Spencer's forte is the muzzle-loader, telescope and bench-rest combination.

The Excelsior Rifle Club of Jersey City will celebrate its seventh anniversary Dec. 12, by a match with the Essex Indians of Newark.

There is an undecided team match between members of the Independent New York Corps which dates way back to the Chicago Fair festival. We refer to the match made between Messrs. Walther, Krauss and Martin against Zimmerman, Busse and Pittschier. Our attention has been called to this ancient agreement and the suggestion made that these gentlemen come together in Glendale Park on Dec. 19 and decide the merits of the two teams.

Alexander Stein, of the Independent New York Corps, who became a Benedict in the early fall, returned last week from an extended tour through the South. On Friday night of last week Captain Weber marshalled the corps at headquarters, and headed by Boswald's band marched to Lieutenant Stein's residence, where he was given a rousing home greeting.

# Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

### FIXTURES.

Dec. 12.—RIVERTON, Pa.—Riverton Gun Club versus New Utrecht Gun Club, 10 men team race.

Dec. 13.—MORRISTOWN, N. J.—Handicap at 15 live birds, $15 entrance, handicap 26-33yds, class shooting, $25 added to the two high guns.

Dec. 20-21.—ELIZABETH, N. J.—Two days' shoot of the Elizabeth Gun Club; first day, targets; second day, live birds.

1895.

Jan. 1.—NEWARK, N. J.—Fifteenth annual New Year's Day tournament of the South Side Gun Club. W. R. Hobart, Sec'y.

Jan. 15-17.—HAMILTON, Canada.—Hamilton Gun Club's annual tournament; $1,000 added money. J. W. Bowman, Sec'y.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York; $1,000 guaranteed, all surplus added.

May 8-10.—WEIR CITY, Kas.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $200 in cash added. W. W. McIlhany, Sec'y.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec'y.

June 4-7.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia, John C. Shallcross, Sec'y, Frankford, Pa.

## Trap-Shooting Control.

FOREST AND STREAM'S editorial in last week's issue touching upon crookedness in trap-shooting hit the bullseye plumb center. Mr. J. T. Mascroft and "Old Reliable" voice correctly the sentiments of thousands of trap-shooters who love trap-shooting solely for the sport to be obtained from it and for the good-fellowship engendered at every tournament.

But if trap-shooting is to keep its popularity (and it unquestionably is popular now), its tournaments must be purified and the amateur must be protected. Dropping for place must be done away with, and the only way in which it can successfully be combatted is by organizing a National Association of Trap-Shooters. This association, with a membership comprising all the best known gun clubs and kindred organizations of the North, East, South and West, and with a judiciary board to adjudicate upon complaints and to discipline and punish crooked work at the traps, would without the slightest doubt prevent any recurrence of cases similar to that which is related by Mr. Mascroft. No honest trap-shooter is likely to object to such a scheme as that propounded by FOREST AND STREAM, although it may be looked upon with disfavor by men with a crooked tendency. Those are the men we are after!

## Control of Trap-Shooting.

CINCINNATI, O., Nov. 30.—*Editor Forest and Stream:* I have read your editorial in the last issue of FOREST AND STREAM on "Crooked Trap-shooters." That some action should be taken to guard against crooked shooting is clearly apparent. Any observing man can see work of this nature at any of the tournaments given in this country from the larger meetings down to a cross-roads shoot. Pooling winnings, missing birds to drop for place, etc., etc., is now done so openly that trap-shooting is fast sinking to the level of crooked horse-racing. The plan you suggest is a good one, but there must be a national organization to make it operative. It will require a very persistent effort to form such an organization, but when once formed and with a board that will show no favors, the evil can be rooted out to a great extent.

I have received information that some of the Southern shooting clubs will during the coming season bar shooters of this class.

I shall be pleased to render you all the assistance in my power.

OLD RELIABLE.

SULTON, Mass., Dec. 3.—*Editor Forest and Stream:* I have just read your editorial in regard to crookedness of trap shooters. You are advancing a scheme which I think is just right, and just what every good, true sportsman ought to endorse, and just what you will find nearly every amateur will back up. I know there are a few experts in every community who are shooting for what money they can get out of it, and many of them are always ready to drop their birds to get into a certain place to get one part of the money alone. We all know this is done, but when I see a shooter do this it makes me feel different toward him than I want to. I will relate a little instance that happened only last week: I was at a tournament and we were shooting a 25 bird race; the high scores were 25, 24, 22 and 21, and there were only two more men to shoot. One of them was as well able to get 24, or 25 as any one that had shot, but when he went out to shoot I heard a shooter say, "that man can get 24 or 25, but you will see that he wil get 23." He even went so far as to make a small bet that he would make 23 and sure enough he did so? When he came in he was asked why he missed those 2 birds; he said, 'There's no 23 is there?" I speak of this because I know it will drive the amateurs away from traps, unless it is stopped, now I shoot every chance I can get, and like to shoot as well as any man living, but when I see anything of this kind happen it spoils my fun; when I see a man go out and shoot just as well as he can and not look for a loophole to drop into, I cannot help thinking that he is worthy of the name sportsman.

J. T. MASCROFT.

## Ashbourne Defeats Somerton.

ASHBOURNE, Pa., Nov. 26.—The following scores were made in a team race between the Ashbourne and Somerton gun clubs. The race was 12 men to a side, 25 targets per man. Scores:

Ashbourne.

## Cut This Out!

WHILE attending the Interstate Manufacturers' and Dealers' Association tournament at Charleston, S. C., Manager Shaner handed us a small book with a stiff card back, size 3½×2in. As he handed them around we supposed they were literature of the Association. The title is: "Trap Shooting Rules adopted by the Interstate Manufacturers' and Dealers' Association." The rules are revised up to April, 1894, and are for both target and live birds.

Perhaps the best part of this little work is contained in the last 12 pages. It is headed: "Hints on how to organize a gun club." This is information that is often sought for, and the hints given are easily understood, easily followed and are all that are necessary. Three short paragraphs on page 31 are of special interest to FOREST AND STREAM as they bear upon a point intimately connected with its trap columns. They read as follows:

"Too much attention cannot be paid to the election of a good live man to fill the office of secretary: one who will send off scores and interesting reading matter promptly to the different sportsmen's papers.

"There is nothing that will 'boom' a gun club more than having scores made at open or practice shoots published in the sportsmen's papers.

"This will be the means of letting other sportsmen know you are in existence, and they will begin to pay attention to you."

The next paragraph warns correspondents against sending in false scores, and winds up with the following: "Above all, write plainly, *and only on one side of the paper.*" The advice is good and the italics are the author's own. The balance of the little work contains a constitution and by-laws which can be easily adapted to any organization.

These notes are not, neither are intended to be, any puff of the little book in question, which is merely part of the advertising matter of the Association. The paragraphs quoted, however, are worth the attention of the members of every gun club.

Send in your scores, together with notes on the same, but send them in promptly. News to be such should be fresh, not two weeks old. Don't forget to state the conditions of each event and the amount of entrance money. Write names legibly. FOREST AND STREAM'S compositors are experts at deciphering all styles of handwriting, but even they may make mistakes. When making carbon copies press hard, but always send FOREST AND STREAM the best copy. See that the totals correspond with the scores in detail; in fact, save the trap editor as much trouble as you can.

Secretaries of gun clubs! Cut this out and paste it in your hats.

## The Morfey—Batsch Match.

NEWARK, N. J., Nov. 30.—*Editor Forest and Stream:* Mr. Morfey referred in contemptuous terms to two or three $5 bettors from Newark, thereby intimating, of course, that $5 betters may be thrown down with impunity, but that those who wager large amounts must br protected. Then again he gets into a feeling humor and thinks a certain class are bitter against him because he is "English born." All the English shooters with whom I have been in contact have been truthful, honest, fair-minded sportsmen. Previous to the above shoot I thought Mr. Morfey was honest and truthful. At one stage of the race I asked him if he intended to beat Batsch out by ten birds, and he replied that he did intend to do so, and had wagered $20 to that effect. On the strength of this, myself and another each wagered a small amount at evens, and as a matter of course, we lost. For the money I care nothing, but I am extremely sorry that a man who has achieved the success attained by Mr. Morfey should smirch his reputation by such crooked actions as those of which he was guilty at Elizabeth. I am heartily in accord with the spirit of the editorial in your last issue, and wish you God speed in your endeavor to purify the sport and weed out the crooked element.

C. M. HEDDEN.

## The Audubons' Thanksgiving.

BUFFALO, N. Y., Dec. 1.—Thanksgiving Day was a cold day for shooting, but the Buffalo Audubons held their turkey shoot just the same. The nimrods began at 10 in the morning and pecked away at the bluerocks until 5 in the afternoon.

The turkey competition was held first. It resulted in many ties. These were decided by lot, and the loser had to be content with second prize in the class. The winners were as follows: Ties on 19 birds: P. G. Meyer 1, J. H. Ball 2. Ties on 18: P. G. Willett 1, C. S. Burkhardt 2. Ties on 17: L. Erb 1, J. P. Fisher 2. Ties on 16: H. T. Le Beau 1, E. Burkhardt 2. Ties on 15: W. Brennan 1, Jas. Franklin 2. Ties on 13: A. Coombs 1, A. C. Suckow 2. Ties on 12: E. H. Rounds 1, L. Fries 2. Booby prize, 1 bird killed: E. P. Reynolds. The scores made by each man were: L. W. Bennett 19, G. P. McArthur 14, J. P. Fisher 17, Dr. C. M. Daniels 4, A. Kobler 11, Dr. H. R. McMichael 10, H. D. Kirkover 17, P. J. Willett 18, E. Burkhardt 16, D. C. Sweet 7, C. S. Burkhardt 18, E. W. Smith 19, L. Erb 17, H. Erb 6, E. H. Rounds 12, A. C. Suckow 13, John Feist 11, A. C. Heineld 16, J. H. Ball 19, B. Talsma 19, A. Coombs 19, Dr. J. L. Smith 9, Dr. Poole drawn, J. J. O'Brien 9, B. C. Gifford 8, H. T. Le Beau 19, P. J. Meyers 19, P. Heinz 5, L. Fries 12, J. A. Dingens 9, J. Franklin 15, W. Brennan 15, E. P. Reynolds 1.

After the turkey shoot a badge shoot for classes A, B and C at 25 bluerocks was held. Class A is composed of the experts, class B of the medium shots and class C is made up of members who have not yet made a record. In each of these classes a gold badge is put up for the man making the highest score at any of the scheduled shoots. The medal, however, must be won five times before becoming the permanent property of the winner. J. P. Fisher was the lucky one in class A. He has now captured the trophy three times. In class B J. H. Ball triumphed by killing 19 birds. This is the first time that he has landed at the top of the heap. Ald. Franklin was the successful one in the class C competition, and will wear the trophy till the next shoot, which will take place Dec. 15. In Franklin's class were A. Coombs, who has won the medal three times, and John J. O'Brien and C. S. Berkhardt, each of whom have scored twice.

The scores made by each man in the classes were:

Class A.—J. P. Fisher 15, A. O. Heinold w., E. W. Smith w.

Class B.—J. H. Ball 21, H. D. Kirkover 19, Dr. C. W. Daniels 12, E. H. Rounds 11, A. Kobler 6, A. C. Suckow 15, H. T. L. Beau 15, S. B. Duly 19, G. P. McArthur 12.

Class C.—J. Franklin 15, A. Coombs 10, D. C. Sweet 6, J. J. O'Brien 11, E. Burkhardt 10, B. J. Willett 12.

H. J. BALLIETT.

## Live Birds in Jersey.

MORRISTOWN, N. J., Thanksgiving Day.—The following scores were made at Frank Class's grounds:

Match, Timmons vs. Young, 25 live birds, $25 a side, 28yds. rise, 50yds. boundary:

| | |
|---|---|
| Jas Timmons (Morristown) | 2110021221121212110112011111—21 |
| Robt Young (Mendham) | 0202112200000101211222000—14 |

Sweepstakes, $5 entry, 5 live birds, 3 moneys each:

| | No. 1 | No. 2. | No. 3. | No. 4. |
|---|---|---|---|---|
| R Young | 10100—2 | 22110—4 | 21001—3 | 00002—1 |
| J Timmons | 11210—4 | 12112—5 | 12010—3 | 20201—3 |
| H Nesbitt | 11002—3 | 00011—2 | 11010—3 | 10002—2 |

| | | Tie. | | | Tie. |
|---|---|---|---|---|---|
| Castle | 01211—4 | 1 | Rudden | 02212—4 | 0 |

*Earle's Halfway House.*

LINDEN ROAD, Nov. 28.—Some members of the Midway Plaisance Gun Club had an outing at Earle's Halfway House on the above date. As the wind was blowing a gale and as the birds were of the best kind possible, the scores were good under the circumstances. Scores:

No. 1, 25 live birds, $25 a side:

| | | | |
|---|---|---|---|
| Astfalk | 0022101121021201122102012 | —18 | |
| Earle | 1120200212120120211012011 | —18 | |
| Ties: | | | |
| Astfalk | 10022—3 | Earle | 12202—4 |

Match, Mulford vs. Updegraff, $10 birds, for 10 a side, Mulford allowing Updegraff 4 dead birds:

| | | | |
|---|---|---|---|
| Mulford | 1110122—6 | Updegraff | 1111000w. |

Match, Mulford vs. Earle, 5 live birds, $5 a side:

| | | | |
|---|---|---|---|
| Earle | 20212—4 | Mulford | 00221—3 |

Sweep, 10 live birds, entrance $10, one money:

| | | | |
|---|---|---|---|
| Mulford | 1211011210—8 | Astfalk | 1201011202—7 |
| Earle | 0011010021—5 | | |

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

Mr. George H. Spear, proprietor of the Oxnard Hotel, at Norfolk, Neb., writes under date of Nov. 27 the following in regard to a tournament at live birds and targets to be held in his city shortly: "On Thursday and Friday, Dec. 27 and 28, there will be held in this city a shooting tournament by Chas. R. McCord and Geo. H. Spear, proprietors of above hotel. The targets will consist of over 1,500 live birds and plenty of inanimates. There will be $250 in cash prizes and $250 in merchandise prizes extra; the medal for the northwestern Nebraska championship will also be shot for. We have one of the best shooting grounds in the State, and are, as a city, geographically located so as to be very easily reached from all directions, being on the F. E. & M. V. R. R., D., St. P., M. & O., and Union Pacific railroads, with good train service; have a population of 5,500 people with three first-class hotels, thus giving ample accommodations for all who attend. A copy of our programme will be mailed you as soon as same are printed. Address all communications to Geo. H. Spears."

Louis Duryea is back from a three weeks' hunt in Wisconsin, and looks as if his deer hunting has done him no harm. Mr. Duryea is a member of the Turtle Lake Club, an organization with a limited membership, which controls one of the best game and fishing districts in the United States. The bag of the party of eight was 45 deer in 20 days.

R. A. Welch and T. S. Dando shoot for the Riverton Plate at Riverton, N. J., on Thursday, Dec. 6. If Welch beats his opponent, George Work will have the next call.

Gun clubs in New Jersey which are not yet affiliated with the organization known as the New Jersey Trap Shooters' League should lose no time in joining that association, which has already done a lot of work in the way of booming trap-shooting in the land of the mosquito. The initiation fees, etc., are merely nominal, and anybody who writes for further information will receive a prompt reply. The secretary of the League is Mr. W. R. Hobart, 246 Mount Pleasant avenue, Newark, N. J. The fourth season commences Jan. 1, 1895.

The Newark City Handicap, under the auspices of the Newark Gun Club, a mention of which was made in the issue of Forest and Stream for Nov. 24, will take place on Jan 24; handicaps vary from 26 to 33yds All other conditions are precisely similar to those which governed the Empire City handicap of the Emerald Gun Club. Entries accompanied by $3 forfeit should be sent to W. H. Green, 629 John street, Kearney, N. J., or 559 Broad street, Newark, N. J.

The Central Gun Club, of Harrison, N. J., held a shoot at 12 live birds per man on Thanksgiving Day; the prize was a hunting suit. Coyle, Roche and Fullager were high with 9 each; they will shoot off their tie on a date not named as yet.

"Dutchy" Smith has something to say about hogs. Read the following: "Plainfield, N. J., Dec. 1, 1894.—A live bird shoot for two 300lbs. corn-fed Chester white hogs will take place at the Climax Gun Club grounds at Fanwood, N. J., on Wednesday, Dec. 12, 1894, commencing at 1 o'clock sharp. There will also be sweepstake shooting before and after the main event. Conditions are 10 live birds each man, $7 entrance including birds. It will take ten entries to pay for the hogs; all over ten entries the money will be divided into two moneys, 60 and 40 per cent. The high man to take his choice of hogs, the second man gets the other hog, third man 60 per cent., fourth man 40 per cent. The winners of the hogs can leave their address at Benner's Hotel, adjoining the grounds, and he will dress and ship them free of charge. The birds will be furnished by your humble servant, and they will be 'goot enof fur enny boty.' No outside shooting allowed. Refreshments and loaded shells on the grounds.—Charles Smith ('Dutchy')."

Notice to secretaries of gun clubs: If your club is contemplating holding any important tournament next season, get it to fix upon a date and send a note of same to Forest and Stream.

Central New York trap shooters are securing dates for next year's shoots. The West End Gun Club, of Albany, N. Y., claim Feb. 22; the Canajoharie Gun Club, of Canajoharie, N. Y., will hold their shoot on Decoration Day, May 30.

Dr. Carver celebrated Thanksgiving Day by shooting a race for $500 a side (it is said), and won it by the score of 92 to 69. The race was a peculiar one, the Doctor shooting against ten opponents, who each shot at 10 birds, while Carver shot at 100. The ten were members of the Chicago Board of Trade and included Messrs. Cummings, Schwartz, Clark, Dupee, Hunter and Edwards.

In the final shoot of the Central New York Trap-Shooters' Association held on Nov. 27, Rochester won the series, and thereby claims the large silver trophy which was the prize for the team races which have been such a feature of the Association's contests this year. S. Glover, of Rochester, also won the individual championship of the League at targets.

The Rod and Gun Club of Canandaigua, N. Y., are considering plans and specifications with a view to commencing shortly the erection of a club house.

The first race between teams of the New Utrecht and Riverton Gun clubs will take place on Dec. 12 at Riverton, Pa. The conditions are teams of 10 men, 15 live birds per man, 30yds. rise, Riverton Gun Club rules to govern. Both clubs can get together hot teams, so that a good contest should be the result.

On Wednesday of this week (Dec. 5) the first contest for the President's cup takes place at the Carteret Club's grounds, Bergen Point, N. J.

Teams consisting of members of the Larchmont and Country clubs will shoot a match at an early date. Capt. Money will captain the Larchmont team.

The joint match of the series of three between W. G. Clark, of Altoona, Pa., and T. W. Morfey of Paterson, N. J., will be shot on Monday, Dec. 17 at the baseball park, Altoona. Open sweepstake shooting will commence early, the match being set for 2 P. M. Worden Bros. of Harrisburg, Pa., will supply the birds, which is a guarantee that they will be of good quality and that there will be plenty on hand for all requirements.

The Hamilton, Ont. Canada, shoot on Jan. 15, 16 and 17, '95, will be attended by quite a large delegation of shooters from the East. Among those who will almost certainly be on hand on the morning of Jan. 15, are Capt. Money, M. F. Lindsley, W. Fred Quimby, T. H. Keller, J. L. Brewer, F. Van Dyke, T. W. Morfey, etc. etc. Jim Elliott will also be there according to his present calculations. The Hamiltonians will have no reason to kick at a lack of interest on the part of New York and New Jersey.

The letter on "Control in Trapshooting" signed "Old Reliable" is written by one who is well and favorably known in trapshooting circles. His sentiments will strike a responsive chord in the breast of every straight out trapshooter.

Although the Grand American Handicap of the Interstate Manufacturers' and Dealers' Association is yet four months off, the interest now shown in it proves conclusively that it is *the* live bird event of the season.

The Invitation cup, value $150, now on view in the store of Von Lengerke & Detmold, 8 Murray street, will be competed for on the grounds of the Flushing Shooting Club, under the following conditions: 25 live birds, $10 entrance, birds extra, handicap rise, open to members of the Carteret, Westminster Kennel, Riverton, Larchmont, South Side and Country clubs; 60 per cent. of purse goes to high gun, 30 per cent. to second high gun. Cup to be won three times before becoming the property of any shooter. The second contest is set for Saturday, Dec. 22, entries closing on Dec. 18. The third contest will be on Saturday, Jan. 5, entries closing on Jan. 1. All entries to be sent to Wm. T. Wilcox, secretary, Flushing, L. I., the cup being donated by the Flushing (L. I.) Shooting Club. Shooting commences each day at 10:30. To get to the grounds of the club take the 8:40 train from Long Island City for Muncy Hill station, where stages meet the train and convey the shooters direct to the grounds; the next train for Muncy Hill does not leave Long Island City until 10.

A live bird shoot will be held on Friday, Dec. 7, at Charlie Zwirlein's grounds, Yardville, N. J.; first and second prizes are two black bear cubs.

Edward Banks.

**A Stray Shinplaster**

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

### Death at the Trap.

The sad fatality which occurred on Thanksgiving Day at a shoot held by the East Side Rod and Gun Club of New Brunswick, N. J., is only one more proof of the care that should be exercised by everybody who is carrying a loaded gun.

As well as can be ascertained the facts are very simple: Henry J. McCauley was standing at No. 3 trap, the end trap on this occasion, as the club was only using three traps. The man at No. 2 had just shot and was walking toward No. 3 when the gun in the hands of McCauley was prematurely discharged, while the muzzle of that weapon was pointing toward the rear. That the gun was pointed in this direction is proved by the melancholy fact that William Griggs, George Holzwarth and William Hooker received the contents of the shell or shells. They were standing some 30 or 40ft. from McCauley, and behind the man at No. 1 score

Griggs, who got the main body of the charge of shot in his head, has since died of his injuries, while one nt least of the others will lose the sight of his right eye. Some accounts of the affair state that two shells were in the chambers of the gun, but the most authoritative statement is that but one shell was in the gun at the time of the accident.

Without wishing to add anything that would increase the load of sorrow now borne by McCauley, Forest and Stream cannot help drawing attention to the fact that he was evidently doing something that was fraught with danger to the bystanders, *i.e.*, loading his gun while the muzzle was pointing toward a human being.

The fact that the shell exploded while the gun was being closed, without the trigger being pulled or without even the hammers having fallen upon the plungers, is hardly a mitigating circumstance. No person can attend a single tournament without witnessing an instance of the reckless handling of a gun. Most clubs have by-laws inflicting fines for such carelessness, but by-laws of that nature are very seldom enforced.

In the case of hammer guns, the premature explosion of shells while the breech is being closed is by no means rare. The fault seems to lie in the plungers, as accidents occur alike with shells fresh from the factory as well as with re-loaded shells; of course they are more liable to occur when the primer is not properly pushed home, as is often the case with shells that have been reloaded.

Whether McCauley was using reloaded shells does not appear, but it is morally certain that the primer was struck forcibly by the plunger, which had not gone up into the breech block, while he was in the act of snapping his gun together.

In talking about the accident the other day, Capt. A. W. Money said that such premature explosions were liable to occur at any time with hammer guns of any make, where the barrels were snapped down toward the breech, instead of the breech being brought up toward the barrels in the act of closing the gun.

### Westminster Kennel Club's Scores.

Babylon, L. I., Thanksgiving Day.—It has been the custom of the members of the Westminster Kennel Club to hold a live bird shoot at the club's grounds, Babylon, L. I., every Thanksgiving Day for the past ten years. There were but six shooters on this occasion who faced the traps, their names being Fred. Hoey, Capt. A. W. Money, C. M. Chapin, J. P. "Palmer," G. de Forest Grant and B. H. Kittredge. Among the other members present at the reunion were J. G. K. Duer, J. F. Lawrence, Joseph P. Knapp, W. R. Knapp, Joseph Larocque, Jr., W. T. Jerome, C. Haswell, John Snedicor, Charles Coster, H. I. Nicholas and C. Haswell. A special train was chartered to carry the members to their destination, the trip being made in 55 minutes. The weather was very cold, but otherwise the conditions were favorable for live bird shooting. As is usual here, the birds were a strong fast lot that, aided by a stiff breeze, kept the scores down. In the third, fourth and fifth events, Kittredge dropped no less than 28 straight, 13 in No. 3, 5 in No. 4 and 10 in No. 5. Palmer started off well killing 17 straight. Fred. Hoey being close behind him with 16 before he missed a bird. Scores:

Matches at 3 birds, $5 entrance, then miss and out, handicap allowances:

| | No. 1. | No 2. |
|---|---|---|
| J H Palmer (29) | 12222222—8 | 2222211—7 |
| Fred Hoey (30) | 22221122—8 | 2111212—7 |
| C M Chapin (26) | 21121210—7 | 21011 —4 |
| Capt Money (30) | 2120 —3 | 2112210—6 |
| B H Kittredge (27) | 220 —2 | 2220 —3 |
| C deF Grant (28) | 0 —0 | 00 —0 |

No. 3, 7 live birds, $5 entrance, handicap allowances—28yds. men one miss as a "no bird," 27yds and under, one miss as a "dead bird."

| | | | |
|---|---|---|---|
| Chapin (26) | 22•20 —4 | Money (30) | 2122121222220—12 |
| Grant (28) | 2•22200 —4 | Hoey (30) | 20 —1 |
| Palmer (29) | 127 —2 | Kitteredge (27) | 2222212111222—12 |

No. 4, miss and out, handicap rise, No. 6, same:

| | No. 4. | No. 6 | | No. 4. | No. 6. |
|---|---|---|---|---|---|
| Chapin (26) | 0 —0 | 1120 —3 | Hoey (30) | 22220—4 | 20 —1 |
| Palmer (29) | 22212—5 | 220 —2 | Kittredge (27) | 22221—5 | 2220 —3 |
| Money (30) | 1220 —3 | 11222—5 | Grant (28) | | 22220—4 |

No. 5, 10 live birds, handicap allowances, same as in No. 3:

| | | | |
|---|---|---|---|
| Hoey (30) | 2222020 — 5 | Chapin (25) | 0102100 — 3 |
| Grant (28) | 20222220 — 6 | Money (30) | 122002212 — 7 |
| Palmer (29) | 202122222 — 8 | Kittredge (27) | 1221222222—10 |

The other events were shot with the following results: No. 7, $5 miss and out, was won by Fred Hoey with 6 straight. No. 8, a 3 bird race, $5 entrance, was divided between Capt. Money and Palmer. No. 9, a miss and out similar to No. 7, was won by Hoey with another score of 6 straight.

### Boiling Springs Gun Club.

Rutherford, N. J.—Below you will find scores made at our Thanksgiving Day shoot. The low scores made are traceable to the Lehigh soft-coal burners, C. H. Coe and Larry; result, headache for all on the grounds.

No. 1, 10 targets, entrance 50 cents: Richmond 9, Huck 10, Collins 6, Coe 2.

No. 2, same: Richmond 9, Huck 8, Collins 8, James 6, Frank 6, Larry 1, Paul 9.

No. 4, 15 targets, entrance 74 cents: Huck 14, Paul 7, Richmond 12, Campbell 8, Coe 11, Jeanerette 7, Hutchinson 5.

No. 5, same: Huck 10, Richmond 10, Frank 10, James 12, Collins 13, Larry 1, Jones 3.

No. 6, 20 targets, unknown angles, entrance 80 cents: Huck 16, Frank 14, Collins 12, Paul 14, Coe 11, Richmond 17, De Wolf 9, Jeannerette 12.

No. 7: Richmond 16, Collins 18, Paul 17, Huck 16, James 14, Frank 14, Coe 12, Jeannerette 12.

No. 8: Huck 17, Richmond 17, Jeannerette 13, Coe 15, Collins 11, De Wolf 12, Paul 11.

Match, 7 live, birds, $5: Paul 6, Campbell 3.

No. 1, 5 live birds, $3: Richmond 4, Paul 3, Coe 0, Collins 1, Huck 3, Campbell 1, Hutchinson 2, Collins 5, Jones 2, James 3.

No. 3, 5 live birds: Jones 4, Collins 5, James 5.

Dec. 1. The following scores were made at the regular monthly shoot held this afternoon. The small attendance was undoubtedly due to the bad weather.

Club race, 25 empires per man;

| | |
|---|---|
| Huck | 1111111111111111110011111—23 |
| Paul | 1111111111111111111001011—22 |
| Lemon | 0010110001001011010000001— 9 |
| Frank | 0110001111110100011100100—13 |
| Jeannerette | 0111100101000021100101000—11 |

A few sweeps followed. W. H. Huck, Sec'y

### Live Birds at Flushing.

Flushing, L. I., Nov. 30.—The Flushing Shooting Club's initial shoot of the season took place yesterday, Thanksgiving Day. In the club race at 10 live birds Hand and Dresser tied with 9 each; on the shoot off, miss and out, Hand won the first round. The birds were a strong lot of flyers. Scores:

No. 1, club sweep, 10 live birds:

| | | | |
|---|---|---|---|
| C Hand, 27 | 2102112211—9 | D LeRoy Dresser, 25 | 2102212211—9 |
| R Jacob, 25 | 1202001110—6 | J T Richards, 27 | 0001102121—6 |
| J D Willis, 26 | 2110202210—7 | J Baker, 27 | 2200211222—8 |
| L E Embree, 25 | 0112000112—6 | W Lawrence, 27 | 0000022112—5 |

Nos. 2, 3, and 4 at 5 live birds:

| | No. 2. | No. 3. | No 5. |
|---|---|---|---|
| W M Lawrence, 26 | 02102—3 | 10220—3 | 10220—3 |
| M Sandford, 27 | 00020—2 | ..... | ..... |
| L E Embree, 25 | 02120—3 | ..... | ..... |
| E Clark, 25 | 21221—5 | 20100—2 | ..... |
| T Rowe, 23 | 02210—3 | 02021—3 | 00000—0 |
| J Baker, 27 | 01023—3 | 22212—5 | 12220—4 |
| D LeRoy Dresser, 25 | 21220—4 | ..... | ..... |
| J T Richards, 27 | 01220—3 | 00121—3 | 01101—3 |

*Dec 1.*—This afternoon, although a regular fixture of the club, the heavy rain, and the fact that Thanksgiving day was but two days past, had the effect of cutting down the attendance of members to low water mark. Messrs. Rowe and Mickle being the only ones who braved the elements. Mr. Sandford, a member of the Elkridge Hunt Club of Baltimore, was also present and shot along, as the following scores show: No. 1, 5 live bird; No. 6, 6 live birds:

| | No. 5. | No. 6. | | No. 5. | No. 6. |
|---|---|---|---|---|---|
| T Rowe, 23 | 21222—5 | 212022—5 | G B Mickle, 25 | ..... | 120220—4 |
| Sandford, 28 | 12220—4 | 222022—5 | | | |

Wm. T. Wilcox, Sec.

### Rye Gun Club.

Rye, N. Y., Nov. 30.—A very pleasant day and a large attendance of shooters and spectators made the Thanksgiving Day shoot of this club a successful affair. The birds were an unusually strong lot and hard to kill, making the shooters do quick work to score. The 5 bird scores were remarkably clean considering the high-class birds, the gentlemen from the Emerald Gun Club, of New York city—Messrs. "Schorty" and "Scott"—making the highest scores of the shoot. The numerous ciphers which appear in the scores of the target events would denote that "sumthin" was the matter with the boys; the unknown trap and angle rule was the probable cause of their downfall. The scores made in the several events were as follows:

No. 10 targets, expert rules:

| | | | |
|---|---|---|---|
| F Field | 0010000101—3 | E Doyle | 0000001010—2 |

### Irwin Beats Bogardus.

Springfield, Ill., Nov. 30.—During the past two weeks it has been advertised rather extensively that on Thanksgiving Day there would be shooting all day at the ball park, live birds and Peoria targets to be used, and that at 2 P. M. the old champion A. H. Bogardus and W. "Tramp" Irwin, now of Peoria, would shoot a match at fifty live pigeons, Bogardus rules, that is, gun below elbow, use of one barrel, bird must fall outside a 10yds. circle drawn around the trap.

Mr. Irwin was on hand with his blackbirds and the Captain had plenty of pigeons, but such a morning would cause all but the trap-shooting crank to remain at home. Ground covered with sleet which melted as it got warm enough to rain. A few sweeps were shot and then the match came off as per advertisement. The champion took pride in showing the fine old blue birds he had selected, and well he might, as they were "corkers," with the exception of a few at the last end of the string. The Captain has shot quite a number of these races but this was the first one for the Tramp, hence Bogardus was cool and not afraid to let them get over the "dead line," but Irwin got off on his third bird and dropped it about a foot inside the line, and though very dead was scored lost. The Captain had one on the line also, but it was scored dead.

The drawing of birds was about even, but for scratching down birds and gathering them the champion was a long way in the lead. The day was dark, so was the ground and the background; as most birds flew low they were very hard to see; this accounts for most of those that got beyond the fence. Irwin's score is a very good one—everything considered, especially as he was fresh from shooting a couple of 200-bird matches, using both barrels and shooting first one quick. This style of shooting is so much more like field shooting that it should become more popular everywhere. After a bird flies 10yds. and there is but one barrel to use it is something like giving a bird a "chance for its life."

The Peoria targets worked fine, and the boys were pleased with the way they went into dust when hit hard.

This is so near Bogardus's home that everybody knows him. His son Henry was with him prepared to give rifle exhibitions, providing the day had been pleasant. The score:

W "Tramp" Irwin..11•1111111111•1111001111111011111•111111110101111—42

Capt. Bogardus.....1101111111101011111111100111111110101101111111010l—40

Capitol.

### Thanksgiving at Canajoharie.

Canajoharie, N. Y., Dec. 1.—Thanksgiving Day opened up very cold with a strong west wind blowing across the traps. Among the visitors were E. D. Fulford, John Fulford and H. L. Gates, of Utica; H. M. Levengston and W. H. Bockes of Saratoga Springs, and F. W. Partiss, of Johnstown. The quality of the live birds was very good indeed. Fulford pronounced them to be the best he ever saw trapped outside of John Watson's grounds at Chicago. The targets were thrown from Crutty's new trap. Their swiftness can best be judged from an examination of the scores made by Fulford and Levengston, both good target shots.

The following is a list of the officers elected by this club for the ensuing year: President, T. C. Pegnim; Vice-President, E. S. Benjamin; Secretary, Chas. Weeks; Treasurer, H. P. Bancroft. Scores:

No. 1, 5 live birds, $2 entrance:

| | | | |
|---|---|---|---|
| T C Pegnim | 00220—1 | Chas Weeks | 02102—3 |
| F W Partiss | 22201—4 | | |

## Wilmington, N. C.

WILMINGTON, N. C., Dec. 1.—The tournament held here on Nov. 29 and 30 was a thorough success. It was held under the auspices of the Eastern Dog and Game Protective Association, a local organization composed of a hundred or more members, the most active of whom in the management of this shoot were H. McL. Green, President; J. H. Berry, Vice-President; L. D. Pritchard, Secretary; C. C. Covington, Treasurer; Tournament committee, H. L. Green, R. H. Grant, D. McEachern, J. C. Lodor; Finance Department, W. A. Wilson; Scorers, V. M. Robinson, W. P. Boney and Jas. H. Taylor; Judges, T. L. Graham and E. J. Bridges.

This was the first tournament ever given by this organization, yet it was managed fully as well as any tournament I ever attended, there not being the least thing to cause a participant to complain. Everything ran smoothly and every shooter present was congenial and bright.

The afternoon before the shoot was passed by the writer in company with the popular gentlemen, Messrs. A. W. DuBray, representing the great Parker Gun, and T. K. Keller, of New York city, in becoming acquainted with local shooters and enjoying a little practice at the traps.

The beautiful new steel pigeon gun shown by Mr. DuBray attracted a great deal of attention and made new friends for the Parker gun. The shooting qualities of the Parkers used by Meesrs. Worthen and Fonda was noticed by all.

Among those present were the old reliable Col. J. T. Anthony and A. E. Stokes, of Charlotte, N. C.; Messrs. Bicaise, Steck, Wohltman, Post, Swan, Peterman, Worthen, Costello and others of the Palmetto Club, of Charleston, N. C.; E. L. Pemberton, H. M. Pemberton and D. Lilly, of Fayette Club, of Fayetteville, N. C.; Dr. Moore and Captain Sims, of Wilson, N. C.; J. L. Fonda, of Greensboro, N. B., and a number of shooters from nearby points; also Mr. Collins, representing the DuPont smokeless powder, and Mr. Thomas, representing the Troisdorf. Each evening the shooters all met at the headquarters of the management and were entertained until a late hour. When the last gun was fired three cheers were given for the E. D. and G. P. A.

Below are the scores:

*First Day.*

No. 1, 20 singles, known angles, practice shoot, entrance free: T. H. Keller 16, Anthony 11, Stokes 14, DuBray 14, Worthen 16, Fonda 14, Swan 17, Peterman 15, Empie 12, Grant 13, McEachern 14, Wise 13, Stack 14, Post 15, Wohltman 7, Costello 9, Harker 7, E. L. Pemberton 11, Pickett 11, Thomas 11, Lilly 6, H. M. Pemberton 17, Sanders 7, Heinsberger 14.

No. 2, 15 singles, known traps, entrance $1.45, $10 added, 4 moneys: Keller 11, Anthony 12, Stokes 14, DuBray 8, Worthen 14, Fonda 10, Swan 12, Empie 8, Peterman 13, Grant 9, McEachern 8, Wise 8, Harker 6, Post 13, Steck 8, Wohltman 11, Costello 7, Bernard 5, Moore 12, Sellers 10, McKinnon 4, H. Pemberton 8, E. Pemberton 12, Lilly 3.

No. 3, team race, 20 singles, entrance $8, $20 added, 4 moneys:

## The Holiday Week at Albany.

ALBANY, N. Y., Dec. 20.—The past week has been so prolific in shooting events hereabouts that our own and neighboring shooters found themselves drawn into an unusual whirl of excitement with the pigeon, chicken and turkey shooting.

The first event of the week was the live bird tournament of the Loudenville (a surburb of our city) Gun Club, which was held last Tuesday, Nov. 27. The attendance at this tournament was fairly good, but the assemblage would undoubtedly have been increased had it not been for the gale that raged the night before and led many shooters to believe that the roaring of old Boreas presaged the coming of a heavy storm. It was therefore with no small satisfaction that the undaunted ones who ventured forth in the sullen quiet of the gray morning that followed that dismal night, found a later transition to the soft and sunny, though haze-bedimmed features of a typical Indian summer day.

One capital feature of the preparations that had been made for the comfort of visitors at the Loudenville shoot was a shooting lodge which had actually been erected for this especial occasion—the ground not being the regular field of the club—and a pot-bellied stove, which with a good coal fire, disseminated comfort in chunks. The front of the shanty was fitted with sash, well glazed, and seated at the broad shelf which served as a table for the clerical force the FOREST AND STREAM correspondent, who acted as official scorer, performed his work in almost luxurious ease. In the group of shooters that found shelter under the lowly roof were many of the shining lights of the eastern league clubs, the West End and the Forester Gun Clubs of this city being well represented; there were also present shooters from Troy, New Scotland, Clarksville, Granville, and Rupert, Vt. The shooting ground was admirably laid out in a fine stretch of level meadow, perfectly adapted for the purposes of the occasion, and the shooting was very general in its excellence, its merits being marked by the fine wing-powers of the pigeons furnished for the sport.

The shooting was boomed along on the squad system, and this enabled the boys to shoot out thirteen sweeps and to clear the coops of over 400 pigeons. It would be presumption to expect space for the detailed scores of these events in the trap columns of FOREST AND SUREAM, overcrowded as they must be from the plethora of the reports of the late holiday shoots; so I will simply say that the shooting was so general in its excellence that scarcely any one failed to get a bit of the purses, while a few were fairly good winners, and, best of all, there were no kickers nor soreheads.

THANKSGIVING DAY SPORTS.

There never was a holiday in this region where there were so many shoots "on" as last Thursday. Taking the near-by ones into consideration I will first mention the pigeon shoot of the exclusive Forester Gun Club, about a dozen members of which shot a 25-bird competition in the morning, making the usual excellent scores which the fine shots of this club are capable of, and gaining by the exposure to the keen air and in the exhilaration of a contest, where good fellowship rather than stake money is the life of the meet, that glow of good feeling that naturally gives zest to a Thanksgiving dinner.

On the western outskirt of the town, at Job Shafer's Hotel, close to the grounds of the West End Gun Club, the riflemen were given a chance for the display of their skill, and many a lordly gobbler and big Brahma went down at long and short range by the good work of the small bore chaps who persistently pegged away from dawn till dark

The other shoots that caught some of our marksmen were: At Witbeck's Hotel, McKownville, there were chickens and pigeons to try the powers of the guns and gunners; at Morrisville, a few miles out on the Schenectady road, via the beautiful drive through Loudenville, the same attractions were offered, and at Karner, a station on the N. Y. Central Railroad, eight miles from here, the rural riflemen found a day's pleasure in an old-fashioned turkey shoot.

SWENY—SANDERS.

The final event of the week was an exhibition match, which took place at the grounds of the Ridgefield Athletic Association on Friday morning. This event took the form of a pigeon shooting match between Harry R. Sweny and John B. Sanders, two of the youngest, but at the same time most skillful of our live bird shots. The weather conditions of the day of the match were of the worst description, the wind sweeping across the elevated and exposed plateau of Ridgefield with resistless fury and driving the pellets of snow that came with the squalls into the face, stinging like nettles. As the affair had received no advance notice from the city press in regard to the dates it was not generally known where it would take place; consequently there were only a hundred or so of poor shivering mortals who stood exposed to the cutting November blasts for over two hours to see a match that was not distinguished by very brilliant scores. The conditions of the contest were 100 birds per man, American Shooting Association rules to govern. There was no money up, the match being made simply to determine which was the better man of two of our "young bloods" of the League. The pigeons were simply clippers, requiring the quickest kind of work to get on to them effectively; and while both the chappies were prompt and accurate with the guns they shot in hard luck from start to finish, the gale carrying bird after bird with its death wound over the boundary. Sweny actually killed 91 birds that were gathered, and Sanders did as much with 87, but the inexorable boundary rule cut their totals down to 81—71, as will be seen in the appended detailed score:

| | | |
|---|---|---|
| H R Sweny | 11111001111112212111 1 212—22 | |
| | 11110111 1 211 1 21211 1 11 1 1 0—18 | |

| | 012 1 11102121222 1 1211222222—21—81 | |
| J B Sanders | 11110120111012110111 1 122—19 | |
| | 1102 1 01111120111111012111 —18 | |
| | 10122111111111 1 1 111111111—22 | |
| | 12 1 10021 1 01 1 11212 111 20 1 —12—71 | |

Mr. T. H. Greer, one of our oldest most experienced pigeon shooters, was the referee in the above match, FOREST AND STREAM'S correspondent official scorer.

The next event of importance of pigeon shooting circles will be the open tournament to be gotten up by Mr. Henry A. Kratz, Secretary of the West End Gun Club, well known as a popular shooter on the league circuit. The friends of Mr. Kratz intend that this event shall take the form of a testimonial, and there will undoubtedly be a fine turnout of local and league shooters generally. Over 500 birds will be guaranteed; shooters from all quarters will be invited and nobody barred. The date is not yet settled, but it will probably be in the third week of the present month.

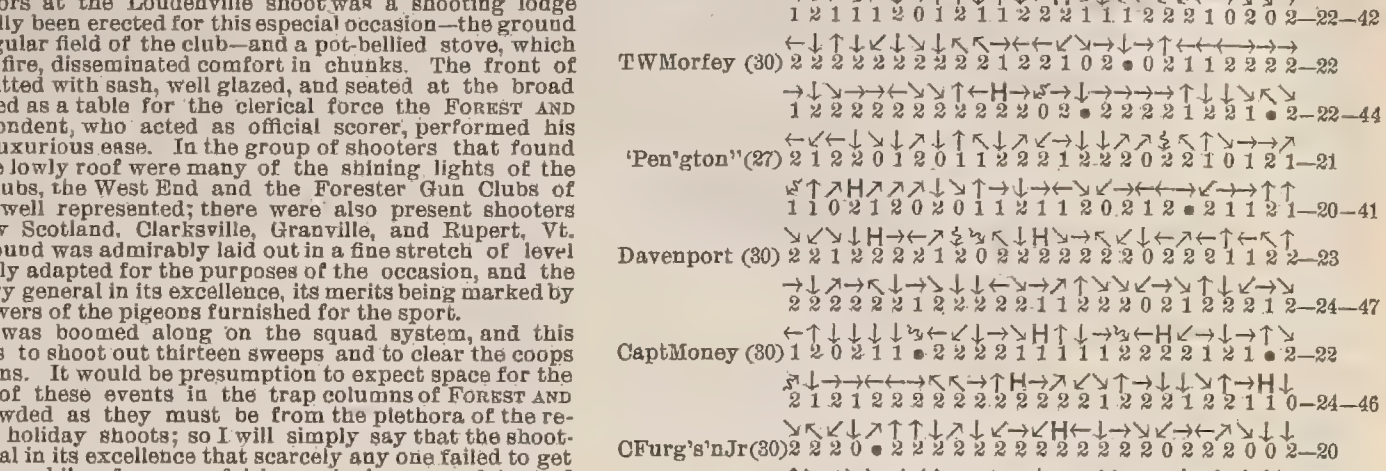
The league clubs are already stirring for the coming year's events; the West End Gun Club, of Albany, claiming Feb. 22, and the Canajoharie Gun Club, May 30, for tournaments in 1895.

HORACE B. DERBY.

## New Utrecht Gun Club.

THERE'S very little fun in shooting live birds on such a day as Dec. 1 was. Not a breath of air was stirring, while a steady rain made everything decidedly wet and uncomfortable outside the club house at Woodlawn, L. I. The natural result was a poor turnout of shooters to take part in the club handicap sweep at 50 live birds, $25 entrance. Although three or four more members had signified their intention of putting in an appearance, as well as their $25, a scant half-dozen was all that answered to their names when President Sykes called the roll. These were Dr. Wynn, one of the veterans of the club; Capt. A. W. Money; L. T. Davenport, fresh from a three weeks' hunt with the Turtle Lake Club; C. Furgueson, Jr., C. T. "Pennington" and T. W. Morfey. All save Pennington were Class A men, and from the way that gentleman is handling his gun it looks as if it won't be very long before he gets put back to 29 or 30yds.

The birds were ordinary, as was only to be expected from the weather. New Utrecht birds as a rule are good and strong flyers, but Saturday was enough to dampen any bird's ambition for freedom. Still, they were just that class of birds which produce ciphers in the score unless a shooter is careful every time he goes to the trap. It will happen on such occasions that a man draws duffer after duffer until he becomes careless and is caught napping by a corker sandwiched in here and there; or he may get two or three fast birds and become keyed up to concert pitch; the next time he goes to the trap he gets a slow quartering bird and misses it clean on account of its very easiness. Morfey's eighteenth bird was a good sample of this kind of a miss.



Dr. Wynn made some excellent kills with his second barrel, but perhaps the honors for the most effective placing of the second shell really belonged to Pennington, who scored several very brilliant second barrel kills. It was a close race all the way through, and Capt. Money had but to kill his last bird to tie Davenport. The bird, a fast dark blue driver, got away very hard hit, the combination of a blue bird, dark fence and bad light being too much for the Captain's "poor eyesight." Furgueson was clean off his form, but made some good runs of 13 straight and 16 straight kills, his misses coming as usual in bunches. Fast rising birds was the cause of his downfall on every occasion; he undershot them undoubtedly.

In the sweeps after the main event, his son, 11-year-old Conny, gave his father an object lesson as to how to kill live birds. Conny and his 16-gauge Francotte were answerable for the death of 24 pigeons (one dead out of bounds) out of 25 shot at! In the last miss-and-out Conny was still in the ring with but one shell left at the end of the 12th round, so was compelled to withdraw, taking his ratio of the spoils. This event was not decided until it grew so dark that it was impossible to see even a white bird; consequently Dr. Wynn and Morfey divided when each had missed a bird that fluttered off in the gloom of the night. President Sykes filled the onerous position of referee entirely satisfactorily to all; his task, owing to the conditions of the weather was by no means a pleasant one.

Morfey's red setter Eagle and the club's curly coated black English retriever shared the duties of retrieving the dead birds. By their work and by quick trapping on the part of the club's trappers, who must have been soaked to the skin, the time occupied in shooting at the 300 birds in the main event, was about three hours and a quarter. The first 100 were shot at in one minute less than an hour, and 150 had been trapped in 93 minutes; the last 150 took somewhat longer as the weather grew decidedly worse and birds in consequence refused to fly several times until flagged. Scores:

Handicap sweepstakes, $25 entrance, 50 live birds per man, club handicap rise, club rules to govern:

THE HOLIDAY CUP.

On Thanksgiving Day this club had a good attendance of members, 16 shooters contesting for the Holiday cup. Four class B men tied for the trophy with scores of 9 out of 10, G. W. Conlston winning on the shoot-off by killing 2 straight. The birds were a fine lot of strong flyers hence the absence of a straight score in the cup contest. For the same reason the miss-and-outs were very quickly decided; the first with 11 entries was won by Morfey with 4 straight; No. 2 with 10 entries went to Morfey and Wright with 4 straight; No. 3 with 8 entries was divided between Morfey and Capt. Kennard with 3 straight; No. 4 and 5 were won respectively by Hopper and Morfey with 4 straight. During the day 522 birds were trapped in all the events, including the Furgueson—Hegeman match.

That the boys were there to shoot is shown by the number of entries in the 7-bird and 5-bird sweeps. In the 7-bird event there were 15 entries, first money being divided between Deacon and Morfey who killed all their birds. The 5-bird race had 14 entries; Deacon and C. Furgueson, Jr., dividing first money with straight scores. The details of the cup race and of the different sweepstake events are given below:

FURGUESON AN EASY WINNER.

One of the features of the day's sport was a 50-bird race, $25 a side, between C. Furgueson, Jr., and A. A. Hegeman. An extra fast lot of birds had been procured and ciphers ruled very numerous in consequence, no less than 34 out of the 100 being scored as "lost!" Furgueson with the low score of 38 out of 50 was easily the victor, his opponent losing exactly 22 birds, thus leaving Furgueson a winner by 10 birds. The amount of soft coal burned by the scouts during the progress of the match can hardly be realized; they had lots of sport on the outside of the fence. Score:

N. M. BANCROFT.

## South Orange Field Club.

South Orange, N. J., Nov. 29.—The first open tournament of the South Orange Field Club proved a success in every way. The South Side Gun Club of Newark, Maplewood Gun Club and Union Gun Club were well represented and all went away satisfied. The merchandise prizes were well distributed and it took better than 21 to win fourth prize. A dark horse by the name of Strong captured first, a fine split bamboo fishing rod; second went to Al. Sickly (a shell case); Warren Smith generously conceded to old vet. Asa Whitehead third, a leather gun case; Van Dyke and Drake had a shooting match for fourth, Billy dropped his 21st and Van took the whisky flask.

The club handicap shoot for merchandise prizes for members only, brought out nineteen entries; every one had a show to win and the pace set by the scratch men was hot. Colgate, scratch, first with 22; Babson, scratch, after a shoot off, second with 21; Quidly, allowed four breaks, third; Miller, after a shoot off with Dr. Fisher, fourth.

The ladies had prepared a bountiful lunch, consisting of turkey, chicken, tongue, ham and several other kinds of sandwiches. The beans were fine and all voted Geo. Smith an expert in preparing coffee. Of course the manager kept the targets on the fly. Scores follow:

Special event, club merchandise shoot, handicap, 25 targets, entrance 50 cents:

## Trap at Lynchburg.

Lynchburg, Va., Nov. 23.—Last week Mr. A. W. DuBray was in town a few days talking gun. He had with him an elegant gun with the new Whitworth steel barrels. It is the handsomest American gun I have ever seen. This week T. H. Keller stepped into town on the whole shell. The trap season closed last month, but the boys took him out and shot him all the same. If anybody wants to know about the lay of Lynchburg grounds, let them ask T. K. all about the score he shot while here. Below are the scores made at to-day's shoot.

No. 1, 25 targets, unknown angles:

## Hill Easily Defeats Dilts.

Yardville, N. J., Nov. 28.—About 300 people gathered in Charlie Zwirlein's grounds to-day to witness the shoot between Hill and Dilts. The conditions of the matches, as will be seen, were somewhat peculiar, and at the conclusion of Hill's first string of 25 it looked as if he had a big contract on hand. The birds were a fine lot, the strong wind helping to make them fast and strong. They proved far too fast for Dilts, who shot a poor race, losing by 15 birds, scoring only 47 out of the 75 shot at. When Hill had killed but 18 out of his first 25 things looked serious for him, the terms of the match thus making him 7 birds behind Dilts with only 75 to shoot at. When the 28th round had been completed Hill was one more to the bad, the score standing Dilts 28, Hill 20. Then came a change that altered the look of things all at once. Out of his next 22 birds Hill killed 20 to Dilts's 12, the score thus being a tie at the close of the 50th round. It remained a tie up to the commencement of the 57th round, both missing their 56th bird. Dilts, however, missed his 57th, giving Hill the lead, which he rapidly increased, finally winning out by 15 birds. After the bad break in his first 25, Hill struck a great gait, considering the quality of the birds, missing only 6 out of the remaining 75, a 92 per cent. clip.

The day's sport was brought to a close with a couple of $2 miss and outs; Zwirlein and Cubberly divided the first, with six entries, Hill and Zwirlein dividing the second, which had the same number of entries. Scores:

Match, Eddie Hill versus J. H. Dilts, 100 live birds per man, $100 a side, 1 trap, 28yds. rise, 50yds. boundary, Hill allowed Dilts 25 dead birds:

## Flushing Club's Invitation Cup.

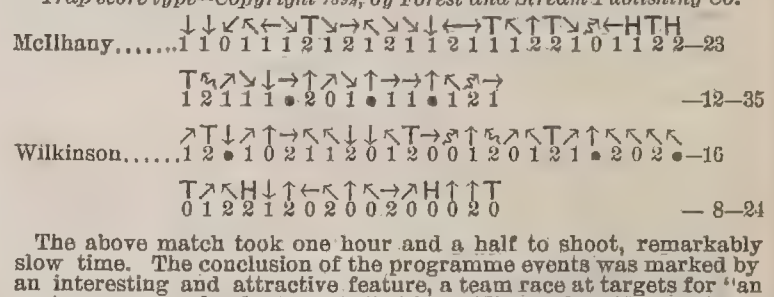
The Flushing Shooting Club, with grounds at Flushing, L. I., a club of recent organization, signalizes its entrance upon its second season by offering an "invitation cup," value $150, for competion among the members of certain clubs. In regard to this cup and the conditions under which it is shot for, the secretary, Mr. Wm. T. Wilcox, writes as follows:

"This club has offered an invitation cup for competition between members of our organization, the Carteret, Larchmont, Westminster, Riverton, South Side and Country clubs, the same to cost $150, under the Flushing conditions, 25 live birds, handicap rise, 50yds. boundary, Flushing Shooting Club rules. Cost of birds and an entrance fee of $10 per man to be charged. Sixty per cent of fees to first, 30 per cent. to second man. Cup to be won three times to become individual property. The first shoot for this cup will be held on our grounds, Flushing, L. I., at 10:30 A. M. on Saturday, Dec. 8, and the succeeding events on every alternate Saturday after above date. Stages will meet the 8:40 A. M. train, L. I. R.R., from Long Island City, at Murray Hill Station, Flushing. Entries for first shoot close Dec. 3 and should be made to Wm. T. Wilcox, secretary, Flushing, L. I."

## "Trap-Shooter's Ready Reckoner."

There has just come from the Forest and Stream press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## McIlhany Outshoots Wilkinson.



Weir City, Kans., Nov. 26.—The fall shooting tournament of the Business Men's Gun Club was a decided success and even better attended than the local shooters had expected. Sixteen visitors, members of the Hutchinson, Parsons, Galena, Scammon, Chicopee and Columbus, Kans., and of the Joplin, Mo., clubs, were on hand. These with about two squads of local shooters, made the mud pies scatter. The day, though quite windy, was warm enough to be pleasant.

Shooting commenced at 9 A. M. and continued until dark. All shooters who had been making a "killing" at the various tournaments in this district were handicapped, and handicapped for keeps. The smiling faces of McIlhany, Calhoun, "Pop" Dixon and others were conspicuous by their metamorphoses as they dug up last summer's winnings to keep the ball rolling.

The main event was the live bird contest between McIlhany and Wilkinson, which was easily won by the former. Wilkinson shot an exceedingly poor race, and seemed to lose heart early in the game, as he noticed his opponent bowl over bird after bird. Wilkinson is well known in this part of God's country as an old country trap and handle shooter. He has defeated quite a number of antagonists at this unsportsmanlike game. His backers were very confident of victory and lost over $500 by his defeat. The match was shot under American Association rules, Wilkinson furnishing the birds. At the conclusion of the forty-first round, seeing that he was shot out of the race, Wilkinson declined to finish the match, although a considerable amount of money was bet on the total scores out of 50 birds. The following score shows the flight of the pigeons and the first and second barrel kills:

Match—50 live birds each for stake of $200 and gate money—American Association rules:

*Trap score type—Copyright 1894, by Forest and Stream Publishing Co.*

The above match took one hour and a half to shoot, remarkably slow time. The conclusion of the programme events was marked by an interesting and attractive feature, a team race at targets for "an oyster supper and refreshments." Mayor King and ex-Mayor Abbott captained respectively the winning and the losing teams. As it was quite late before the race could be shot only 16 shooters took part in it. King's side won in spite of Kirk's ten straight (misses), by 3 targets. Trap-shooting is rapidly gaining in popularity here and with the coming spring a revival of the sport will take place that has never been equalled in the Southwest. Already team races are discussed between the clubs from Weir City, Joplin, Galena, Scammon and Columbus, and I presume the war will end only by the survival of the fittest.

Mamaluke.

## Irwin—Walpert.

Peoria, Ill., Nov. 25.—There was a time in the history of the shooting affairs of this country when Peoria was one of the leading shooting centers. In the days of Fred Kimble, Chas. Stock, Chas. Lincoln, H. Fahnestock and many others not known to the writer, there were some of the biggest contests ever "pulled off" and some of the best tournaments of the times held here. Four days of last week the popping of guns at Lake View Park was heard. Wednesday and Saturday two matches, 100 live birds, $100 a side, American Ass'n rules, 12 gauge guns, came off. The contestants being the well known W. "Tramp" Irwin and Mr. Gus Walpert, an old resident and well known pigeon shot. The scores show that the first 100 birds in each match were extra good and fast but a very few had to be flagged; but you know birds get slower toward night fall, the first match going well into the night time. The score:

First match.

# Answers to Correspondents.

## No notice taken of anonymous communications.

D. H. D., Cleveland, O.—For good deer-hunting county in Pennsylvania try the northern part of Clearfield county or the neighborhood of Bellefonte Center county.

T. D, Eau Claire, Wis.—1. In a pigeon shoot I bet A that C beats him for a place, and for some unknown reason C does not shoot. What disposition is made of the wager? 2. Four men in a shoot at 10 birds each, three get 10 birds each and the fourth man gets 2. Who gets second money? Ans. 1. As C did not shoot the bet is off. 2. The three who killed straight divide first money. The other man gets second money.

## For the Preservation of Metals Used in Roofs, Bridges and Construction Work.

At the Montreal meeting of the American Society of Mechanical Engineers, an interesting paper was read on methods for preserving metal used in pipes, roofs, bridges, poles, construction work, etc. In conclusion, the whole question of how best to protect iron and steel from corrosion in all the varying conditions that the wants and usages of to-day demand, seems to resolve itself into several "Don'ts," as the best method of answering it, to wit:

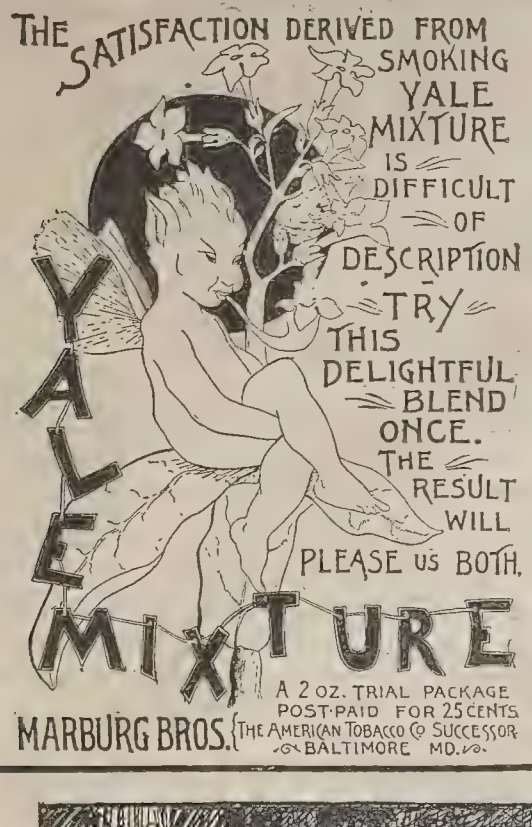
Don't have any scale on the metal.

Don't paint it with anything but pure linseed oil and oxide of lead or graphite paints.

Don't forget that frequent inspection and care are very necessary.

Don't let the cost and interest accounts be the governing factors in the case of protecting any metal structure on whose continuity and strength human life and safety depend.

In comparing the two paints recommended, it may be well to add that a properly made graphite paint should prove more durable and a better protector than oxide of lead Graphite has a strong affinity for metal surfaces, and experienced painters claim that even where light colors are desirable, graphite paint should be used as a priming coat. Again, graphite is impervious to the action of heat, cold, sea air, acid or alkali fumes, which are more or less destructive agents to lead paints.

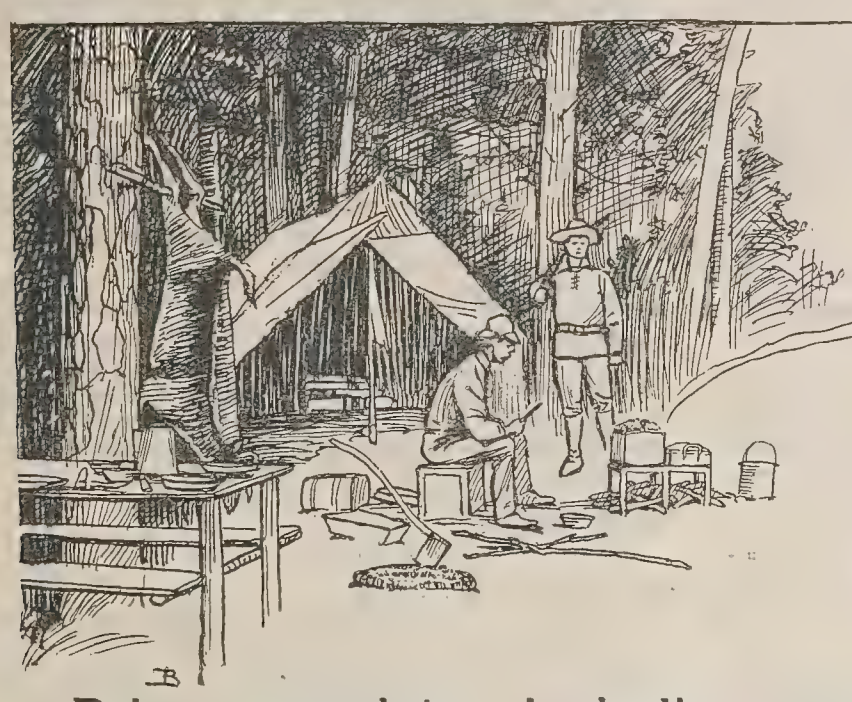


The Joseph Dixon Crucible Co., Jersey City, N. J., have manufactured a pure linseed oil and graphite paint for over 25 years, and have some very convincing testimonials of its value.—*Adv.*

## Fastest Time Ever Made from Chicago to Jacksonville, Fla.

"The Monon Route" (L. N. A. & C. Ry.) placed in effect on Nov. 18 the fastest schedule ever made between Chicago and Jacksonville, Fla., leaving Chicago at 8:32 P. M., arriving at Jacksonville, Fla., at 9:55 A. M. the second morning, making direct connections with the morning departures from that point with all diverging lines and arriving at interior and southern Florida points by daylight, St. Augustine and Palatka b fore noon; Ocala, Orlando, Sanford, Winter Park, Bartow and Tampa early in the afternoon; Titusville and Rockledge before supper, and Lake Worth before bedtime. The trains are vestibuled, Pintsch lighted and steam heated, with the finest dining and sleeping car service in the world. For further information, time tables, and sleeping car tickets, call on or address Sidney R. Jones, C. P. A., Monon Route, No. 232 Clark street, Chicago.—*Adv.*

## Playing Cards.



The Marlin Firearms Co. have issued a very neat pack of playing cards, bearing on the back an engraving of the latest Marlin, which they are sending to the trade and their friends among traveling men. —*Adv.*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, $5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages Price, $3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, $3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, $1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, $1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, $1 50

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7×9½in.), 147 illustrations. Price, $5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, $2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream.* Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream.*

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price $1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, $1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, $1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, $1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understanded of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, $2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidæ of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, $2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, $2 50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, $3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, $2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, $2.

### The Breech-Loader and How to Use It.

288 pages. Price, $1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, $1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, $1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, $1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., $1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, $1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, $2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, $3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream.* Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, $2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field.* Illustrated, 584 pages. Price, $6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, $3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, $2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½×12½. Price, $10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, $3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream.* Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, $2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, $1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, $16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, $10.

**The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.**

### *A CHRISTMAS WEEK GUARANTEE.*

A FORTUNE would come, and all of a sudden, to the dealer in Christmas goods, who could guarantee that every gift purchased from him would be certain to please its recipient more than any other could. That is a guartee which unfortunately cannot be given, for while the gift may be worthy and fit and chosen without regard to cost, there is yet the possibility that it may not be the one thing most potent to please.

But there is a Christmas time guarantee which we propose to put at the head of the outside front cover of the FOREST AND STREAM next week; and it runs something like this:

*Our Guarantee*—We guarantee that every person paying 10 cents for this paper shall have more than ten times 10 cents worth of entertainment.

That might have been put on the cover to-day, or last week, or any other week; and for that matter it might be kept standing there. It shall be used this time to emphasize the store of good things in the Christmas number.

### *THE NEW YORK FISH COMMISSION.*

COMMISSIONER COXE, the latest addition to the New York Fish Commission, is reputed to have been offered the place in order that he might be made "solid" for the political wing in power; and he is also reputed to have accepted it because he was under the delusion that a salary went with it. Now that he is in, his chief anxiety appears to be to provide snug, warm and well-paid places for the smaller political fry. And so on, as the poet sings of the fleas, *ad infinitum*. Of the five commissioners, then, two are politicians, a third is a joke, a fourth is noted as a commissioner chiefly for his frolics at one of the hatcheries; and a fifth, the president, does the work.

The time has come for a radical change in the organization of the Commission. It is time to have done with jokes, frolics and politics. It is time to come down to business—the fish business of the people of the State of New York. If the people understood this thing as it is, they would say just that. They should understand it, and they should demand action at Albany next month.

The first thing to do is to cut down the Commission, as was suggested in our issue of Nov. 17, from five to three; or better, to one. One man can do the work of five men better than five men can do the work of one. Make the Commission single headed.

Retire the jokers and politicians to the rear. To administer the fishing interests put in a person thoroughly informed as to fish, fishing and fishculture; that is to say, one who knows something about these interests and how to administer them.

Being competent to perform the duties of his office, let him be held responsible for their performance honestly, intelligently and effectively.

For his services pay him an adequate salary.

Cut off the shellfish department of the Fish Commission. Turn the oysters and clams over to a special and independent shellfish commissioner, or put them under control of a bureau of the land board or the Comptroller's office.

Separate the State game and fish protective force from the Fish Commission. There is enough for the Fish Commission to do without the protective work. The protective work can be done more efficiently if it be unhampered by the Fish Commission. Moreover, by having taken from it the appointment of protectors, the Commission will be relieved from political embarrassments.

The time is ripe, too, for a radical change in the administration of the work of the Commission. We want a vastly increased output of fish and at a vastly less cost. An honest, intelligent and capable single-headed Commission would effect this by first reducing the force of employees. There are too many superintendents now, one at each hatchery. One general superintendent is enough for all the hatcheries combined. The position of hatchery superintendent should be abolished. A simple care-taker could take care of the stations. A force of experienced men, under the supervision of the general superintendent, might be organized to do all the work of fish hatching, going from one station to another as the spawning seasons demanded, devoting their time in turn to the trout at Caledonia and the Adirondacks, the whitefish and ciscoes at Clayton, the pike at Oneida Lake and Three-Mile Bay, and the tom cods and smelt at Cold Spring Harbor. In summer the entire force could be employed in shad hatching, and in such repairs as might be required at the general stations. Two-thirds of the present force could do all this work, and do it better and more cheaply than it is done now.

But first, preliminary to effecting any changes of administration, let us have a new organization, a single, competent, efficient and accountable Commissioner.

The New York Commission is not the only one that should be reorganized and reformed. Fishcultural interests are at loose ends in several other States, where an application of business principles to the work of fishculture would most decidedly be to public advantage.

### *THE WATER-KILLING OF DEER.*

A CORRESPONDENT, who has just received a handsome deer head from the Adirondacks, sends us a letter written by one of the men who killed the deer. When the hounds were heard driving the game to water, the writer of this letter, not having a gun at hand, grabbed a club and started for the lake. Others closed in with guns and rifles; and dogs, men, clubs and guns, all together besetting the beast in the lake, it was eventually done to death.

Some persons might not joy in the possession of a head, no matter how magificent, secured in that way; but judging from the popularity of water-killing deer in the North Woods and the scores of hunters and greenhorns who take part in it, such finical sportsmen would be in a minority.

Nevertheless, the killing of deer in the water should be prohibited in the Adirondacks. We do not care for the argument that the supply is so great that the deer stock can stand the decimation. It is not altogether a question of supply; it is just as much a consideration of sportsmanship. Should not the practice be forbidden? We would like to hear from those who are familiar with Adirondack deer conditions and are interested in them. Our columns are open for both sides to have their say.

### *RETAIN AGENT ANDRUS.*

THE cause of game and game protection in Minnesota is popularly associated with the name of W. P. Andrus, the Executive Agent of the Fish and Game Commission. The Minnesota scheme of protection and its successful application and enforcement are in a very large measure due to the sagacity, activity and honest devotion of Mr. Andrus. His term will expire Jan. 1. His reappointment would be taken as an assurance that the good work is to go on. For the sake of the public interests at stake the FOREST AND STREAM trusts that it may record the retention of Mr. Andrus for a new term of usefulness.

### *THE CUP COMMITTEE AND THE NEW DEED.*

IN openly abiding by the new deed of gift the Cup committee of the New York Yacht Club has taken a position which, because of its frankness and definite character, is likely to be indorsed by all American yachtsmen. That position is, however, peculiar and anomalous. The committee is engaged in the work of upholding and enforcing something which has been condemned by yachtsmen the world over, and which is no less condemned by the excuses and evasions of its friends. In carrying out this thankless task, however, they have been at least open and consistent, and have avoided the many blunders of the previous Cup committee of 1892-3.

While maintaining sturdily the fairness and legality of the deed, this former committee virtually admitted all that was urged against it by omitting some of the most vital requirements, and thus throwing open to question the legality of their acceptance of a challenge.

The one fair and manly course now open to the New York Y. C. is the complete repudiation of the discreditable document forced on it by a few men. So long, however, as the club is not prepared to go so far as this, and still insists on the legality of the new deed, it is at least a satisfaction that through the Cup committee it is prepared to stand by the whole deed in toto and not by a mutilated and distorted version of it.

We wish we could congratulate the club on making the only reparation in its power for the gross act of injustice perpetrated in its name in 1887. Failing this, we can at least congratulate it in a much lesser degree in that it possesses the courage of its convictions, and is at least prepared to stand squarely and openly by what it has once accepted, bad though that may be.

### *THE NEW YORK GAME PROTECTORS.*

THE game and fish protectors force should be divorced from the Fish Commission. The duties of the State Commission of Fisheries are properly those set forth in the resolution under which the Commission was first created, *i. e.*, the propagation and distribution of fish and game and investigations into the causes, should there be necessity, of the decrease of the supply of fish and game. The Commission might properly recommend to the Legislature laws for the protection of fish and game; but the enforcement of such laws should be in charge of the State department of justice, the Attorney General's Office.

The chief protector should be appointed by the Governor, upon the recommendation, perhaps, of the Fish Commission. He should hold office during good behavior, and should be removed only for cause. He should have the power of appointment of the members of his force, but should be required to select from an eligible list submitted by the Civil Service Commissioners. He should also have the power of removal, but only for cause, and after trial. The game and fish protectors should receive a salary of at least $800 per annum, with an allowance for actual traveling expenses. No part of the fines imposed or penalties collected should be paid to them. There is always a prejudice in the minds of a jury against the evidence of an informer who receives part of the fine or penalty recovered on conviction. The entire amount received from fines and penalties should be paid in to the Attorney-General's office, to be kept in a separate fund, and used for the payment of expenses incurred in the prosecution of offenses against the game law.

### *THE CONTROL OF TRAP-SHOOTING.*

THE letters printed in our trap columns last week and to-day, with more to come, are noteworthy indorsements of the FOREST AND STREAM'S suggestion that there should be some central representative and governing body to define the ethics of trap-shooting and to secure their observance. The plan possesses certain inherent difficulties, but none so serious, we believe, as to preclude the successful organization of a body which shall have the co-operation and support of the shooting public. The association cannot do everything, nor reform all that should be reformed, but it can do so much for the good of the interest concerned that its formation is surely well worth working for.

Some yarns are founded on fact, but the foundation is so slight and the superstructure so massive that the little fact at the bottom is somewhere down in the bowels of the earth.

# The Sportsman Tourist.

## A PERFECT NIMROD.

THERE is rare old sport to be had in a partridge hunt. I am a crank on the subject and you must excuse me for knowing. I love this life of the field and forest, and am as vain as any veteran of the scars I have won in many a toilsome chase.

They tell me it is tame sport. I dare say it was in the days of our daddies when the birds were snared with a shoestring. But the partridge of to-day is a different sort of chicken. He is shy and speedy and full of guile. He is undergoing a process of evolution all the time. He knows more this year than he did last and will know more next year than he does now. Come hither my father in Israel, and lemme show you a few of the lineal descendants of the "patridge" of your early days. Behold now the roadsider, the hill-climber, the sprinter, the dodger, the swamper, the sky-skipper, the bee-liner, the side-wheeler, the stern-wheeler. My venerable friend, I do cal'late you've no idea how things have changed since you useter bile the kittle in these woods. They will not nestle in your whiskers now as in the days of yore. They do not walk through the kitchen door and roost on the handle of the frying-pan with their *quit-quit-quit!* Hast thou, my ancient, marked the hole in the daylight which the bee-liner bores in his dizzy flight? Hast thou considered the ways of the stern-wheeler, my relic? When the bird bolts out of the brooding air right in front of your sacred nose and goes roaring away like a rocket with his jib cut loose for Limerick, and his propeller ticking off 2222 revolutions per minute—that is the stern-wheeler whereof I spake. He flies with his tail and not his wings, believe me. Shot will not stop him, my sweetness, unless you cock your gun comparatively soon. A comet, did you say, my sainted friend? Ah, no indeed, that is the skipper of the sky. He flies higher and faster and further than the stern-wheeler, and keeps no log, and has no regular port of call. He is gravel-ballasted and clipper-built and carries a balloonjib and spinaker. Gadsme! he is heading for the moon.

---

Much as I love to revel in the aromatic effluvium of the forest, with Victor Hugo Dusenbury I hanker not to invade the forest any more. Victor is a cousin of mine. It is with humility and yet with pride that I confess it. I am proud of the humility which enables me to speak of Victor after what has passed. I know 'tis idle to repine at Providence. I will just say this; that when cousins were being passed round I ought to have been notified to be present, in person or by proxy, to protect my rights. I should, I think, have taken precious good care that Victor was not knocked down to me.

Yet, when Victor arrived from town and strode up the Rue de Cowpath with his tailless dog, and hammerless gun and lawless mien, I recall that I was truly glad to see him. I was bound that he should have some sport. I wanted to see him draw a bead upon the bee-liner and cause him to lay aside formality, fuss and feathers in the fulvous air. Victor laughed when he saw my mongrel cur and begged me to leave him home. But I would not part with those ten pounds of yaller dog-meat for all the blue blood setters, pointers and spaniels from here to Florida. We entered the woods with the weary air of men who were heavily loaded with a mental reservation.

When the mongrel started bird number one I politely invited Victor to shoot. Victor could not see the bird. I pointed him out so Victor. It was painful to see the alacrity with which Victor failed to connect. I pointed out another bird asleep on a pine stub. Victor raced through the bushes and blazed away at a range of about six feet. To the best of my opinion it has been raining blood and feathers there ever since that time. His end was piece—so was the other end. I do not believe Victor got all of the bird after all, for we had forgotten to bring along a rake. There is one great advantage in Victor's style of shooting. He kills, plucks and carves the bird all in one operation. In fact I feel quite positive that any bird Victor shoots will not even need to be eaten.

The next bird was a roadside yearling. When I pointed him out Victor developed a keen sense of locality and let drive at him under a mossy log. How could Victor be supposed to know that the bird was not there at all, but under some other log. I try to be impartial in these things, but I think the look that bird gave Victor as he went betokened more contempt than gratitude. Victor began to be bothered by a note he had to meet, and thrashed around among the bushes with both hammers at full cock.

Bird No. 4 was nicely treed by the mongrel. Victor was naturally alarmed lest I should shoot before he did. He ran forward, let fly in a hurry—and missed. Bird No. 5 took a scoot through the blow-downs and Victor tried to run him to earth. He crashed through the alders and over the deadfalls, scratching his face, barking his shins, falling over himself till I could have sworn it was a bull moose. The bird, like the colored convention, "rejourned sun down." His trunk was checked for the autumn twilight glow, with no stops at suburban stations.

I recommended Victor to accumulate his faculties. He said it was no use—the cares of commerce made him gruesome and distraught. The next bird was a rabbit, heading sou'-sou'west. Victor let go at him in elegant style. He agreed with me, however, that his chances would have been better had his gun been loaded.

Somehow or other Victor made me nervous, too. When he was walking ahead of me he had both barrels at full cock ranging for my presence all the time. When he was behind they were threatening my dignity. If there is anything I specially desire in this life it is to preserve my dignity intact. Had Victor's gun gone off there would not have been at atom of it left.

I began to mark the mongrel holding his head to one side and watching Victor pensively. When he looks that way the mongrel is doing the tallest kind of thinking that a dog can do. He let out about a yard of tongue, but even then the problem was too much for him. Bime-bye he sneaked away and ambled home in deep disgust.

"Do you call this sport?" said Victor at last.

"No," said I.

So Victor and I went silently homeward, too, freighted with a mental reservation bigger than the hump on Bunyan's pilgrim. On the ensuing day Victor gathered up his toggery and left for town. And this is what I read in the paper that came the following morning:

> Our worthy townsman, Victor Hugo Dusenbury, Esq., is a perfect Nimrod. He has returned bronzed and hardy from a week's outing with his rural friends, during which he bagged over sixty grouse, twenty brace of woodcock, and snipe innumerable. He gave the natives of Wayback some pointers in the science of woodcraft that astonished them; in fact, they were fairly paralyzed with his performance.

May heaven's richest blessing rest upon you, Victor, for you surely need it. But the mongrel knows and so do I.

PROWLER.

FREDERICTON, N. B., Dec. 10.

## NOTES BY THE WAY.

BOSTON, Dec. 1.—During the many moons since I have been able to send any notes to FOREST AND STREAM, the dear old paper has come to me with contents of—if possible—ever increasing interest. Never a number comes without suggestion of question and comment, and reminiscences enough to fill a letter, far more, probably, than even its hospitable columns and friendly readers would have welcomed. It has all had to go unrecorded, but some aspect of this year's campaign in Maine, spur me to say a word. But first let me give my testimony to the great work that has been done in the last few years by FOREST AND STREAM in promoting a fraternal sentiment among sportsmen and naturalists from one end of the country to the other and in constantly improving and elevating the tone of all discussions pertaining to their interests. The work was begun long ago, and many who labored then for the suppression of greed and for the preservation of game and for a wise forethought in these matters, almost despaired of ever seeing any widespread interest or willingness to sacrifice present and personal interest for a future and general benefit. Good sentiment, powerful enough to influence action is all too tardy and slow of growth, and I have often been led to picture to myself our hunt-loving descendants excitedly discussing the best and most sportsmanlike methods of taking the English sparrow, the chipmonk and the minnow, and trying to imagine the days of their forefathers, who hunted larger game. But in spite of the senseless and almost universal destruction of so many of our noblest forms of animal life and the irreperable damage done—there are still some treasures left, and there are signs that at last there is something like a public sentiment to which we can appeal.

The letters and statements of FOREST AND STREAM and other journals, including of late not a few of our daily press, have begun to bear fruit. Hunters, guides and natives are affected by them. Into the remotest camps the FOREST AND STREAM penetrates and bears its message to men who have a great deal of time to think.

Now is the time of all times to redouble effort and to spread the gospel of common sense and enlightened self-interest.

In my judgment no one thing ever did half so much to help the good cause as the FOREST AND STREAM expedition to the Yellowstone Park and its revelation through the letters and photographs of Messrs. Hough and Hofer—*par nobile fratrum.* Every one who has had the privilege of seeing that wonderland and also of reading Mr. Hough's letters must, I am sure, like myself, have followed every step of that plucky winter trip with the greatest interest and rejoiced in the thought of the good work the recital was sure to accomplish.

---

As every one knows, the State of Maine is now far and away the greatest and most valuable game preserve east of the Mississippi River, if not on the continent. It boasts no grizzly bear nor elk nor antelope, though it is stoutly asserted that a single stray pair of elk were not long ago shot somewhere on the Allegash, and that the mounted specimens are now in evidence at Fredericton, N. B. This statement and the alleged recent occurrence of the wolverine in the same region are very interesting, and I hope will be thoroughly investigated and reported upon.

But it is certain that Maine entered upon the year 1894 with its vast extent of wilderness abundantly and marvelously stocked with deer, and throughout a great portion of this region caribou and moose were to be found in fairly good numbers. The deer are prolific and hard to exterminate, and caribou are exceptionally well able to take care of themselves even in deep snows and times of crust; but moose, our largest and noblest game, need vigorous and stringent protection if their absolute extermination is to be prevented. Some measure of this protection was finally given after the stock was almost exhausted and that which many of us hoped for, but did not dare expect, was brought about. This year the moose were actually here again, and as I have said, in fairly good abundance. And the fact was widely advertised. The result was such a rush of hunters for the woods as Maine never saw before.

It is said that by sheer inadvertance the law against the killing of cow moose at any time, an absolutely necessary provision if the race is to be preserved, was allowed to lapse. The natural result has followed and the slaughter has been indiscriminate and terrible.

---

On Oct. 7 I started for my nineteenth trip to the Maine woods. I need not to your readers describe what such a trip means. Long planned for and keenly anticipated it becomes with every year's experience of it a more and more glorious privilege and a greater and greater necessity. Never did I long for it with greater ardor nor feel greater need of it than this year.

Through the failure of a cabman to come for me at the proper time, I was belated, and in hurrying, heavily burdened with gripsacks and rifle case, across the floor of the railway station at Boston, I slipped and in the violent effort to prevent a fall—I, by sheer muscular wrench, tore off some of the fibers of the great ligament of the right knee. The train was on the point of starting. Not knowing how badly I was injured I got on board, though with deep down fear that the trouble was serious, which fear was in a few moments quite confirmed. I pass briefly over what followed, viz., a night of pain—a difficult removal from the train at Bangor to a hotel bed—the ministrations of the surgeon, vanishing visions of canoe and camp and one of the finest chances ever heard of to cultivate the virtues of patience and resignation! I thought upon Mark Tapley and tried to emulate his great example, but justice demands the confession that it was only after a time and in a modified degree that I was able to exemplify his philosophy. Some days after my accident, with right leg in splint and with the aid of crutches and with the help of a friend whose kindness I shall always hold in great remembrance—I emerged from the hotel and took the train—not for Boston, but the little station of the Bangor & Aroostook Railway, which had been my proposed point of departure for camp, and where I had hoped to meet a man who was at the same time an old friend and most skillful and admirable guide. I could not bear to go back defeated and utterly defrauded. Better to be, I thought, where I could look out on Katahdin and see more fortunate hunters come and go, see the antlers brought in and hear some of the gossip of the woods, even though I were myself crippled, and so it proved. My knee improved steadily, and I have hope of complete recovery, but the picture of my Maine woods trip for 1894 will have to be permanently framed in much more than "half mourning."

---

I did not see the meat market at Bangor, but by all accounts it presented an extraordinary appearance in those days, crowded as it was with deer, caribou, moose and bear carcasses. In one day two moose, two caribou, two bear and fifty-seven deer had been received. Of course this was the catch of a large extent of territory, but it was the record of only one day and that of every other day was very large. Nothing like it had ever been seen. I am familiar with the rush of sportsmen to the Maine woods at the opening of the game season, but this year has beaten all previous records out of sight. For days every train had carried to the north an antonishing number of men with rifles. There were twenty-five or thirty on my own train. There were camps on every lake and stream, and on many lakes and streams there were many camps. Everywhere there were Winchesters and Marlins. Every man you met carried one or the other. It was the generally expressed conviction that with so many guns and so many eager and inexperienced men in the woods there were sure to be serious accidents. As a matter of fact I remember to have heard of none up to date. Perhaps the general fear effected the needed caution.

From Brownville the new railroad runs through country very familiar to me but it was a most novel and to me an uncanny thing to see it from a car window.

I am glad if the good people of Aroostook county are benefited by this new route to market, but I sorrow with the wood gods at this intrusion on their solitudes. I felt it an outrage to sweep along behind a shrieking locomotive past the head of Schoodic Lake where I had so often drawn up my canoe on the beach with the most comfortable sense of solitude, and to go past the head of Seboois and meet the gaze of Big Jo Merry mountain while traveling in this luxurious and shameful fashion. Last year I felt the same sense of shame and pain in coming down from Greenville to Brownville over the Canadian Pacific line. I looked out on woods and waters which I had known in all their remoteness and wildness, which characteristics are now gone forever. The region from Moosehead Lake to Katahdin has been for twenty-five years my peculiar and favorite hunting ground. I am myself not a bad guide for most of it. Scarcely a peak or eminence in the whole extent on which I have not stood, and on many of them many times, or a lake on the shore of which my camp has not been made. Its people and its places are old friends to me. I can never know or love another hunting region so well. But no amount of this sentiment will stay the hand of the railway maker and I accept the inevitable and let the train bear me on. At every little station or siding was a little group of men, every one with a rifle, and generally there were several deer awaiting shipment. At one station a young cow moose, just killed and the nostrils still twitching and quivering, lay on a flat car. It was to me no pleasant sight but an ominous one. A little further on the train jumped two deer, and two young men from Connecticut who sat beside me and who were going into the woods for the first time, took heart of courage and began to think that they too might "actually kill a deer."

---

I reached my destination and carried out my plan. I saw parties come and watched the eager consultations with guides, the assembling of supplies, the last adjustments, the pushing off and the dip of their paddles as their canoes bore them strong and hopeful up the lakes to camp and hunting ground. I saw parties come in with antlers and trophies and stories of the chase. Three sets of moose antlers—all of young moose—were brought in while I was there. Few attempts were made to bring out any of the meat. Many cow moose had been killed. Parties going into the woods were frankly told of four carcasses of moose hung in the trees at as many points up the West Branch, which could be had for the taking.

Caribou signs had not been lacking, but they were not really abundant. One party, which made the ascent of Katahdin, leaving their rifles a half mile below the edge of the tableland, saw five caribou near the very summit. The animals were in sight a long time, finally moving leisurely off along the plateau to the north.

According to all reports no better deer country could be found than that immediately surrounding the place where I was. Up and down the railroad deer tracks were everywhere to be seen. Those of a huge buck were renewed every night within 200yds. of the house. Several deer were killed by those who simply watched along the burnt lands beside the track. A little earlier—before open time—a gentleman had amused himself by going up and down the line after dark on a "velocipede hand-car" and carrying a jack, and one night within a distance of four or five miles he saw twenty-two pairs of eyes. That is my recollection of his count, and I have not the slightest doubt of the truth of his statement.

Early one morning, just before my arrival, a moose was started only a few rods up the track. It was just before daybreak and the hunter supposed, till it was too late for a shot, that the object he saw might be a man. His forbearance was, no matter at what possible loss of game, absolutely the only course to be thought of. How I longed for a well knee and my old familiar place in the bow of a canoe. One morning I did hobble down to the landing and, having been assisted with as much care as if I had been a bag of diamonds instead of merely flesh and bones, I sat flat down in the waist of a canoe and a gentleman paddled me over to a birch point where some guides had a camp. There I found the white tent, the camp-fire in front, the tea pail hanging on the "spunhungan," and a quarter of venison hanging handy. The witching smell of the fresh fallen birch leaves caught me, and for one wild, self-forgetful moment I was again in

my own hunting camp and far away, whole banks of solid days and nights away from pain and thought and care. Just one moment! but it was priceless. Then, oh! that *ligamentum patellæ!* Its torn and grieved fibres protested, and with a sigh I adjusted my crutches and made my way back to the canoe.

---

The morning after my arrival I was looking out upon the water when I saw a canoe round the point and approach the landing. Bow and stern paddle were moving in perfect form and time and, moreover, at a clipping pace. It was a pretty sight, of course. "Two old hands at the paddle hafts," said I to myself. Presently to my astonishment the tall and graceful young fellow in the bow whose stroke I had been admiring proved to be a tall and graceful young woman. Keeping full stroke till within little more than a canoe length of the landing, she laid the side of the canoe up to the plank as deftly and stepped out as readily and firmly as the best canoeman on Penobscot water could have done. I was not surprised after this to learn that this young Diana of the woods was one of the best fly-fishermen anywhere to be found, nor, later, through the columns of the Boston *Herald*—that she had distinguished herself by bringing down a good deer to her own rifle. Her name was given there and she must forgive me for recording it here. She is Miss Florence Plaisted of Bangor. I was the less surprised at her success with the rifle, though this is her first year of practice, after seeing some quite astonishing targets she made with a fine-shooting .22cal. Marlin while I was there. I wish that to scores of ladies whom I know could come some appreciation of, and then the opportunity to enjoy, the fine freedom and exhilaration which Miss Plaisted has the great good sense to take among the woods and lakes of her native State. She is a good object lesson to illustrate your recent editorial entitled "Woman Out of Doors," and as good sense increases, there shall be more like her.

---

One day a man came in who reported something of great interest if true, viz., that he had trapped a wolf over near Willinocket some time before. The carcass was much decayed when he found it. Having had no experience with wolves he was not absolutely certain as to what he had caught.

Telling an old hunter who had killed wolves in earlier days, that he had some queer creature in his trap, he led him to it. The hunter instantly pronounced it a wolf. I advised the man by all means to save the skull, which he promised to do.

Later a report came that two wolves had been seen in the neighborhood of the Jo Merry Lakes.

It goes without saying that if the long expected and predicted return of the wolves to Maine has begun, sharp work by the Legislature in the matter of placing bounties on them will be in order if the present wonderful abundance of deer is to be preserved. With this next Legislature also rests the duty of the reënactment of the law against the killing of cow moose which, it is said by sheer inadvertance, has been allowed to lapse. This most unfortunate affair has cost the State already what it will take years to regain.

So far as I could learn, no thought of the future has staid the trigger finger of any man who caught sight of a cow moose this year in Maine. I know men who would not have shot a cow moose, but I fear not many such were in the woods this year.

One State Senator, Hon. Harrison Hume, has promised me his most earnest efforts at Augusta this year in securing the desired legislation. If every gentleman who hunts in Maine and desires the preservation of the moose will make it his business to see or communicate with some one of the members of the next Legislature on this matter we shall have a powerful aid to the cause. I am glad to say that many of the Boston papers are good in this matter. The *Herald* has published many columns of reports and vigorous and well-directed editorials upon the subject.

---

Now that I am actually writing to FOREST AND STREAM again there is a great temptation to touch on many points and to ask many questions not all connected with affairs in Maine. One is the wild pigeon question. By all means let us have reports from every one who has seen any of these birds of late, in any part of the country, and let us be assured that mourning doves are not mistaken for pigeons. In my boyhood these beautiful birds had ceased to be abundant in New England, but were not infrequently seen in small flocks. Later, in Illinois, I shot many and saw their annual migration in such numbers as now seem fabulous, and were, even to those most familiar with the facts, always amazing and impressive. The last wild pigeons I have seen were three individuals, four years ago, flying over an old field in northern Alabama.

There were rumors of late of a small pigeon roost somewhere in the Ozark Mountains. Cannot some one report for that region? Will not "Texas Field," also, whose letters I enjoy so much, expand his recent statement, viz., that "The Texas pigeon shooting is something nice," and that he would "guarantee rare sport to any visiting sportsmen?"

---

I want to thank Mr. A. N. Cheney for his recent remarks on the "black bass craze" and the folly of stocking certain waters with these fish. Experience in Maine would illustrate and add emphasis to all he said. Every year narrows the area of undisputed trout water and marks the destructive advance of bass and pickerel. Up the streams they go, and over low carries at flood time and, as Mr. Cheney says, once in they can never be gotten out.

---

Let me not close even this long letter without an item which I think will interest many, viz., the formation of a club for the especial purpose of opening up a new route to the summit of Katahdin (or as I suppose we should spell it "Ktaadn"), and for the more careful study of the topography, the fauna and flora of the mountain and its immediate vicinity, its legends and history and the preservation of its game and most important objects of scenic interest. The Ktaadn Club will have its headquarters in Bangor, but will have a permanent camp at the base of the mountain. Its founder is a well-known and public-spirited Bangor gentleman—Dr. Hamlin. To its associate membership will be welcomed gentlemen from other parts of the country who appreciate the purposes of the club and are willing to contribute in at least a small way to its work. The movement is certainly an admirable one, and I hope to report good things of it later on.

C. H. AMES.

## DOWN IN THE MARSH.

DARKNESS and quiet had fallen upon the camp, but not complete silence. From the tent the heavy breathing of my companion, who, rolled in his blankets, gave out an occasional snore ending with a snort (you have all heard it), the plunge of a muskrat or the quack of a belated mallard, these with the chattering of my friends the owls and the whistle of a coon, borne across the marsh by the light wind, were the sounds that pleasantly disturb the night, as with my pipe I sit by the dying embers of the camp-fire. The beauty of the night and of my surroundings bring to mind the pleasant memory of days and nights spent here in the past, which have been among the happiest of my life.

In the fall of 1865 I first camped here with an old hunter and trapper. Never since then have I seen that man's equal with a rifle. He used to shoot a heavy muzzle-loading, double-barrel of about .32cal., and looked with disdain on any one who used a "scatter-gun." He killed all his game with the rifle, thought nothing of shooting off pheasants' heads, beheading ducks by the neck, and shooting geese on the wing was a mere pastime. I have seen him stand about 20yds. from a board fence and shoot at a nail, driving it through the board, and then putting a bullet from the other barrel through the same hole. At one time he wanted to see me shoot my rifle, a Maynard, by the way, that I was quite proud of. Making a small blaze on a tree about 50yds. away, I shot at it, striking about 2in. to the right and making a small scar on the tree, I shot again, but this time missed the tree, much to my chagrin. He then shot with his rifle and as I supposed missed, and again with the same result. I thought I had the laugh on him sure, but taking his ax he went to the tree and chopped out his two bullets piled in behind mine. He had shot at my bullet hole instead of the mark. [Here the owls made an awful noise, but it's true, every word of it.] As good a canoeman as I ever saw, and a first-class trapper, he caught that fall, with my slight assistance, a lot of fur that would be an eye-opener in these days, including principally, otter, beaver, foxes, wildcat, coon, mink, etc. I was with him about two months, and the fur caught during that time netted over $300. Our only other companion was a hound, whose never-failing qualities as a trailer came in handy several times when some animal would take to the woods with the trap.

Circumstances were such that for three years following the events just narrated I could not visit my old stamping ground; but in '69 I was there again and have camped in the same vicinity every year since; and although in the meantime I have hunted and pitched my tent in many wild and pleasant places, notably in northern Minnesota, Dakota, Montana and Oregon, there is yet a charm about the woods and the marsh of which we know every tree and bog that will never wear away.

They may cut down the timber,
Drain the land if they will,
But the old smell of woods and bog
"Will hang round it still."

The owls are still chattering away. (These fellows must have a language of their own.) The fire is getting low, my pipe is out and a suspicious cool wind is beginning to sway the treetops; and rising to my feet I observe, "Ah, a change; a norther is on. That means business to-morrow. Turn in."

# Natural History.

## A USEFUL BIRD BOOK.

THE value of a natural history museum depends less on the number and completeness of its collections than on the manner in which these collections are arranged and described. In other words, such a museum is useful just in so far as it conveys to the public a knowledge of the collections exhibited there. It should not be a mere curiosity shop which people visit in order that they may be astonished, but a place where natural objects are gathered together and set in order, so that visitors may take in through the eye information which can be acquired only with difficulty, and very slowly by reading. It is within comparatively few years only that the importance of properly labeling museum specimens has been appreciated and acted on. Formerly a collection was thought to be labeled when each specimen had attached to it a card, which bore its Latin name. But the casual visitor who reads a label like this—

*Aythya vallisneria* (Wils.). ♀

North America at large.

certainly carries away with him no very useful information. He sees a duck which is said to be an inhabitant of America, but he has always known that there are ducks in America, and he passes on without having added at all to his knowledge.

It is a great thing for the increase of popular knowledge on natural history subjects that the matter of telling people what the specimens exhibited are is now receiving attention. In some collections each label contains, besides the name, the locality and sex, some salient fact about the specimen, something which the visitor may be struck with, and which he will carry away with him, which he will not only remember, but will remember in connection with the name and the appearance of the specimen to which the card belongs. A publication intended to do just this is the "Visitors' Guide to the Collection of Birds Found Within Fifty Miles of New York City," which has been issued recently by the American Museum of Natural History at Central Park. It is prepared by Mr. Frank M. Chapman, assistant curator of the Department of Mammalogy and Ornithology of the Museum, and is a most creditable production. This Guide is intended to accompany and give facts about a collection of birds formed especially to aid students of ornithology who wish to identify birds found near New York city. With few exceptions all the birds contained in it were collected within fifty miles of New York, and species of which individuals have not yet been obtained within those limits are for the present represented by specimens taken from the general North American collection. Stragglers and accidentals are wisely excluded from the collection. With the Guide in his hand the student need have no difficulty in identifying every species in the collection.

The situation of New York is such as to give it a very large representation of bird life. Mr. Chapman puts the case forcibly in his introduction when he says:

"The region embraced within our limit possesses natural advantages calculated to attract a great number of birds. Our sea coast, with its sandy beaches and shallow bays; our rivers, creeks and ponds, with their surrounding grassy marshes; our wooded hillsides and valleys, our rolling upland and fertile meadows, offer haunts suited to the wants of most birds. Again our coast line and the Hudson River Valley form natural highways of emigration regularly followed by birds in their journey to and from their summer homes.

"But the exceptionable abundance of birds in this vicinity is not due alone to the varied character of the country or to the fact that twice each year streams of migrants pass along our coasts and through our valleys. There are certain causes which tend to limit the ranges of animals. Chief among these is temperature. A study of the ranges and habitats of animals and plants shows that the boundaries of the habitats of many species coincide with one another and also to a greater or less extent with lines of equal temperature. The ranges of these species being thus governed by natural causes are taken as indices of the limits of faunas or natural life areas. The lines between these faunas cannot of course be sharply drawn. The change from one to another is gradual, and thus between the two a neutral strip exists in which will be found species characteristic of each. Just such a condition is found in this vicinity; the northern boundary of the Carolinian fauna overlapping the southern boundary of the Alleghanian fauna in the valleys of the Delaware, Hudson and Connecticut. In other words, we have here on the one hand a number of birds which are found no further north and on the other certain species which are found no further south. That is, in the breeding season; for among birds only the nesting ranges are of value in determining the boundaries of faunas."

Thus we find in northern New Jersey and southern New York and Connecticut, an unusually numerous avifauna, the total list of species found within 50 miles of New York numbering 348, summarized as follows: Permanent residents 35, summer residents 92, summer visitants 18, winter residents 36, winter visitants 16, regular transient visitants 82, irregular transient visitants 30, accidental visitants 39.

The material on which is based the annotated list which is so valuable a part of the Guide, comes from three sources: (1) previously published records, (2) the author's observations near Englewood, New Jersey, which cover about ten years of intermittent study, and (3) the observations of Mr. William Dutcher, whose careful, painstaking and valuable work on Long Island birds is so well known to all ornithologists.

The Guide is beautifully illustrated, in part by line cuts, chiefly of heads and single figures, which appeared in Coues's "Key to North American Birds," and by several full-page half-tone illustrations taken from Dr. Shufeldt's recent work on "Scientific Taxidermy." The latter are photographs of the beautiful bird groups in the American Museum, which are marvels of truthfulness to nature, both as regards excellence of taxidermy and faithfulness of accessories.

The young student of our birds cannot better employ his time for a week or two than by going over this local collection with this Guide in his hand. He can there learn in an hour what might take him many months of hard work to acquire in the field or the closet. Mr. Chapman has performed a useful service for the ornithology of this locality.

---

### What was this Owl? And what this Bear?

HUSHPUCKANY, Miss., Nov. 26.—I have just finished Mr. Hough's very interesting article in the last impression of FOREST AND STREAM. I wish to add some testimony of my own, relative to the undescribed fera and avi-fauna of our country. I am convinced that there exists an undescribed species of owl in the great cypress brakes of Louisiana and Mississippi. I have shot and hunted in these forest fastnesses for the past thirty years, and three or four times I have met with the species of owl I am about to describe. It is not unlike the great horned owl in appearance, but it is much larger, and more powerful. I have seen this bird dash into a flock of mallards at sunset, and carry off a big drake with as much ease as the ordinary owl would capture a sparrow.

The only one I ever saw dead was killed by a comrade, in the late twilight. It was heavily eared and marked somewhat like the *B. virginianus*, but it was much darker in coloring, and measured 6ft. 10in. from tip to tip in expanse of wings. Every Louisiana duck hunter knows of this bird, and I should be glad to know really what it is. It is never seen about the plantations, but lives in the densest of the great cypress forests of the State mentioned.

Then, too, I believe we have in the far South three kinds of bears. The first is the big black bear; I saw one killed three years ago that weighed nearly 800lbs. on a pair of accurate cotton scales—scales for weighing cotton bales. It always has a white horseshoe mark on the breast. The second bear is the ordinary brown, which is common in all the country from Maine to Louisiana.

It seldom weighs over 300lbs. The third bear is red in color like a steer; long, slender, takes to the water like an otter; can swim quite as well, and will tire out the best pack of dogs that ever ran. It never lives out of the great swamps and weighs from 250 to 300lbs.

This bear is utterly unlike any of its kind in many respects, varying enough to make me think it is a new species or the common brown bear modified and changed by its environment. If the modern naturalist could be induced to leave his study and do as Audubon, Wilson and other great hunter-naturalists did, it would be greatly to the benefit of science and add very much to our present

knowledge of obscure or undecided features of natural history. W. H. R.

[There is a great variation in size and color between different individuals—usually described as different subspecies or races—of *Bubo virginianus*, but the extent of wings of the bird mentioned by W. H. R. is 18 or 20in. more than the measurements of the great horned owl, and put that species out of the question. The description given is too vague to enable one to conjecture what it may be. The bear question in North America is as yet an unsolved problem with which several students are wrestling. A yellow bear was described in 1821 by Edward Griffith under the name *Ursus luteolus*. It was said to inhabit Louisiana. See FOREST AND STREAM, Vol. 42, page 27, for notice of a paper on this subject read before the Biological Society of Washington by Dr. C. Hart Merriam. Dr. Merriam would no doubt be glad to secure skulls and skins of the red or yellow bear mentioned by W. H. R.]

### A Golden Eagle.

BELFAST, Me., Dec. 4.—On Nov. 17 Mr. Staples shot a fine golden eagle on Isle Au-Haut in Penobscot Bay It was a large female bird, and was shot while feeding on the carcass of a deer that some parties had shot and taken the head and hide from, leaving the meat on the shore to spoil. These birds are quite rare in this section. There was also a bald-headed eagle with this one, but he failed to get him. The golden eagle is now being mounted with a few other birds that Mr. Staples shot while on the island. BOB BLACK.

### King Eider on Lake Champlain.

ALBANY, N. Y.,—*Editor Forest and Stream:* It may be of interest to your readers to note that the State Museum has received a donation from Mr. George L. Kirk, of Albany, a female specimen of the king eider duck (*Somateria spectabilis* (Linn).) This was shot on Lake Champlain near North Ferrisburg, Vt., December 3, 1894. As the bird is not very common in New York waters I call your attention to it. F. J. H. MERRILL.

# Game Bag and Gun.

## A CONGRESS OF WILD DUCKS.

A HEAVY rain storm on Dec. 4, with continuous cold weather ever since, has brought a vast congregation of ducks into Pamlico Sound, and they lie off the mouth of Newport River in great rafts, trading back and forth across the points of land, and holding caucuses and conventions, at rest and on the wing, wherever they can do so in safety beyond the reach of gunshot.

Like their counterparts in Congress who assembled on the even date, they are of all complexions and shades of quality, gustatory and political, and they maneuver in pretty much the same manner, hovering about the committee rooms, badgering the document clerks, and spending much time at the refectory, quacking, cackling and munching celery, flag root, crabs, fish, oysters and such other comestibles as suit their taste and are conveniently at hand. But, quite contrary to the custom at the National House of Representatives, they discount their own bills, and do their own washing, never failing to rise to points of order, and taking flights of fancy which rural members, newly fledged, seldom attempt.

Continuous harassment and persecution up Currituck way and even as far south as Spense Daniel's, at Wanchese, on the southern point of Roanoke Island, have had the effect to drive all ducks to localities less subject to cannonade, and only those gunners who are posted think of seeking them in the new haunts. Yet, and howsomeever, there are quite a few sportsmen down in Pamlico now, and some who happened in at Newbern in quest of quail were luckily just in time to take advantage of the swift-winged advent, and go down to tide water by rail. Some commercial men, too, who were luxuriating with an unwonted experience at the new Hotel Chattawka, which they all allow is without a parallel in localities of this section, could not resist the temptation to improvise an outfit of guns, ammunition and decoys, and yield themselves to the indulgence of a day off. All came back with full bags, quite delighted, and the hotel has been feasted on mallards, redheads and teal ever since. Redheads predominate, but one Boston drummer, who was enthusiastic, declared he counted at least twelve varieties in front of his blind. He said he did not notice geese or brant. I reckon they are down further toward the inlets.

Newport River is only an hour's ride from Newbern, a pretty town with shaded streets, attractive residences, and a well-kept cosy hotel with a modern cast.

In direct line with duck shooting comes the turkey hunting. Turkeys are quite abundant south of Newbern, almost anywhere on the lines of the A. & N. C., and Wilmington & Newbern railroads, especially at Wallace's Creek, a lovely location on New River, which a club ought to buy as an investment. It is reached by rail to Jacksonville, the county seat of Onslow, and thence eight miles by commodious passenger steamer which runs tri-weekly. This shooting ground comprises 800 acres, and lies directly opposite the celebrated Glencoe Stock Farm of Thos. A. McIntyre, of the New York Produce Exchange, on which he has expended $100,000 or so. He has a fine string of blood horses and neat cattle, a half mile exercising track, tally-ho coach, deer paddock, goose pond, bowling alley, and other requisites of utility, emolument and sport.

I came down here two weeks ago from the hoar frosts of the Red River Valley in Minnesota, and realize that it is good to be here. All through November and up to Dec. 4 the noonday temperature averaged about 65°, and existence was cheerful. One felt the pride of life as a horse feels ginger. Even an old sport like myself was inordinately enlivened. To-day the thermometer indicates 44° at 11:30 A. M., and the sun is shining brightly as before. It is a delightful climate.

I would like, Mr. Editor to expatiate more fully upon the winter charms of this region, as I have already done in many a column of FOREST AND STREAM; but I fear that your readers might think that I am "dead struck" on the place, and only working a high grade advertisement racket. Yet, if one must shoot, his tongue will wag, and I discover no more impropriety in bespeaking the beauties of the Earl of Craven's ancient domain through your paper than in ventilating it around a red-hot stove in a club room. So accepting your indulgence and the privilege of so much space, thus occupied, I subscribe myself once more your obedient servant, CHAS. HALLOCK.

NEWBERN, N. C.

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—*The sale of game should be forbidden at all times.*—FOREST AND STREAM, *Feb. 10.*

RECENTLY I received a letter from Mr. H. M. Tonner, dated at Chino, Cal., the substance of which implies that the brethren of the dog and gun there are confronted with much the same problems of game preservation as those of the older States. He says:

"We have had some jacksnipe shooting and some fair sport with quail; but owing to the long dry spell and the senseless slaughter by market-hunters, to say nothing of the vast herds of sheep that are being driven over our best country, the quail of '94 are about gone on this side of the Sierra Madre Mountains, and the sportsmen of this section will, of necessity, have to cross the range to get any good sport.

"Fortunately this State is large, and many of the best parts of it are unvisited by sportsmen, but the game hog will soon find those parts, and unless there is some law enacted and enforced, we will soon be where many of the Eastern States are at present.

"It is beyond my comprehension why our sportsmen do not wake up. They hold conventions and club meetings without end; but, so far as practical results are concerned, there is no evidence of their existence.

"The most nonsensical law I know of is an act that enables the supervisors of each county to change the game laws at will, and from what I have been able to gather all that is necessary is a petition signed by one or more taxpayers and you have a law to suit you. As this was told me by Supervisor Lord, of San Bernardino county, I consider it pretty good authority, since our quail law, which should read that the season be closed between March 1 and Sept. 1 now reads that it shall be lawful to kill quail within a mile of a vineyard between May 1 and March 1, on the petition of a man who has actually but ten acres of vineyard. Let a State law protect the vineyard, but not a county law to destroy the quail when the vineyards are by long odds of the least value of any of our products. Agricultural and horticultural interests predominate here, yet our game birds must go to foster an industry that is by no means a success. With the FOREST AND STREAM I say 'Stop the sale of game.' I have often killed more than I needed myself; and instead of selling it I send it to my less fortunate friends.

"This is not all. I personally know of members of sportsmen's (?) clubs who always sell their surplus game—men who would become indignant if called market-hunters; but what are they? The market-hunter follows his pursuit as a means of livelihood; the club pot-hunter kills all he can that he may boast of his murders to his moneyed companions who lack the first elements of sportsmanship. This class of sportsmen (?) are in the minority, and it is to be hoped they will cease to exist with this generation.

"It has been my good fortune to shoot for four seasons with an Eastern gentleman, who notwithstanding he had traveled across the continent to kill quail, always stopped shooting when he had brought a dozen or two to bag. Would I that all were of the same cloth, then the game problem would be solved." B. WATERS.

*Editor Forest and Stream:*

In the waiting room of all Wisconsin stations on the lines of the C., M. & St. P. road is posted a conspicuous card giving the open and close seasons for game, and at the bottom of the card is a notice that it is one of the station agent's duties to report violations of the law to the nearest game warden; also that hunting dogs and guns are carried free in baggage cars when accompanied by their owner, and that 150lbs. of game will be carried free to such points as it is legal to carry it. The plan of keeping the game laws before the people is an excellent one. Such a card ought to be put in a prominent place in every post-office, and the State sportsmen's associations could have it done at a trifling cost. It sets the thoughtless violator of the law in thinking, which frequently ends in his reformation, and the notice of a possible penalty will often restrain the vicious violator, while the discussions that are sure to arise round the post-office stove on account of it are educators in the right direction.

There will always be some one to argue for the enforcement of the law, on the ground that law observance is a part of good citizenship, regardless of what the law may be or how many others violate it, and in the end it all tells in the right direction. It has fallen to the lot of the writer to do some missionary work of this kind, and to his certain knowledge it has borne good fruit. It is also well known that if there is much shooting in his neighborhood in the close season he is trying to find out what it is about, and who is doing it.

But the strictest observance of the game laws will not prevent the final extermination of the game; it will put the day of final extinction further off, but the only way to preserve it is to stop the sale of game, for wherever the game gets plenty enough for a man to make common laborer's wages at market-shooting the market-shooter is at work.

Anti-game shipping laws might be sufficient could they be enforced, but it seems they have not been. Those no-souled dollar chasers, the express companies, have no interest in game except as they get to carry it, and they know that the cost of a few prosecutions will be a mere drop in the bucket compared to the profits from the thousands of unprosecuted violations. It is very difficult to enforce the anti-shipping laws, because of the difficulty in getting convicting evidence, and because each case must be prosecuted in the local courts where the offense was committed.

If anti-sale laws were enacted, their enforcement in a dozen of our largest cities would settle the matter, and the law could be enforced there, too. It is argued that the business interests of the game dealers are too great, too much capital invested, etc., for them to be suppressed. They are no better than the market-shooter. Both are destroying one of the gifts of nature to the people, and no man has any right to destroy the people's property nor to use more than his share of it. Perhaps this last statement hits the game hog, too. If it does, we hope it hits hard enough to do some good. O. H. HAMPTON.

MALONE, N. Y.—*Editor Forest and Stream:* No traffic in game, I would like to see, not only as headlines in your most valuable sportsman's educator, but in practice as a law of the most rigid form. It makes us who put money into guns, rods and dogs feel that there is yet something to be done on game laws, when after a hard day's tramp and with two or three partridges in bag we see hanging at our country market ten or fifteen pairs. This does not rest us a little bit; it makes us more weary; so we stop to examine the birds. Most of them we find have been snared, and all of them have been brought in by a pot-hunter and sold for fifty cents a pair. This is of course the cheapest way to get game for the table, and many who care nothing for sport have more game than the sportsman.

We start out "just at the crack of dawn" on a June morning, drive a dozen miles or more for a day's fishing; fight flies most of the time; but manage to bring enough trout to creel of fair size to make the "fry-pan smell." We lose the big ones, but start for home feeling satisfied and knowing the wife and babies will be glad to see the beauties. Here we are wrong, for in passing the market near home we see the sign "Trout for sale," and stop to look at them—20lbs. "just brought in"—and not a small one in the lot, all about one size, with not a mark of hook in lips, but the gills are worn out and the bodies are much marked. The netter has made a good day's wages.

The same tale applies to deer shooting. The sportsman goes into camp, hiring guide, dogs and equipments at quite an expense, and if he gets a buck feels that his investment is good and that he has had his share of sport for one season. The head he has "set up" and it adorns his home. But when he is asked to buy jerked venison at all seasons of the year almost feels like kicking himself for not killing a doe or two and jerking his own meat. We want more protection. We want for protectors men who are fearless and who are men of honor. VAN.

## CHICAGO AND THE WEST.

### The Present and Past in the Wilder West.

[*From a Staff Correspondent.*]

#### Epochs of the Trails.

THE Northern Pacific Railrod goes up the valley of the Yellowstone, following the foot trails of the vanished men who searched for beaver. All the way up to the big bend, where it turns short on its heel and points to the mountains of the region now known as the National Park, it offers an easy and inviting natural roadway. This was the old trail for the North. Down this trail one-half of the Lewis and Clark party came on the return to the East. The party which went down the Missouri was left some distance to the west beyond the divide which separates the waters of the Missouri from those of its great tributary. If you look to the west and north of the town site of Livingston, you can see a high plateau like a lofty mesa, stretched like a dam across the valley of the Yellowstone, as if to turn it to the east. This is the visible divide, the point over which the old wagon trails of the hunting days and gold days ran and still runs. The Indians knew this point well, and it was their favorite ambush point for white men's caravans. History will never tell how many sudden and desperate battles have been waged at this point. Old Tom Laforge—I suppose he must be called old, for he has seen much of the past that now is old—who is one of the old-time scouts, guides and hunters, or was while any such had a vocation, told me that he and Jim Bridger were often up this valley together, thirty or forty years ago, and often hunted antelope where Livingston now is, that being a great antelope range naturally. He said that in those days a party nearly always looked for a fight when they got to this divide of the Upper Yellowstone, and sort of felt disappointed if they didn't get it.

You must cross this divide on the iron trail to get over into the Missouri country. If you pause at Helena, you may go up into a high place and look to the north, and there you can see the Bear Tooth rock, that marks the gate of the Missouri. The Indians say there once was another one of these rocks, but that something happened to it—which something is left delightfully indefinite and vague, like most Indian somethings. Beyond this gate of the mountains lies old Fort Benton. Now one is getting again upon historic ground. The "head of navigation." This was where the frontier really was for so many years. I wish it were there again, so that one could once more know a thrill of merit, as he left the way and set forth into what was really an undiscovered country. Yes, there is the old Missouri, the loved one of the old-timer of the past. There she turns also to the east, this range of mountains in turn making a dam against a western way.

You look again to the west from your high place, and you see a gradual slope, ascending, always ascending, toward the top of the mountains which lie to the left as you look toward the Bear Tooth rock over the Missouri. The waters go no further now. You are at the Great Divide. This is the Northern Pass of the Rockies, a great and fateful place. It was destined that here the iron trail should come which was to destroy the West and change it to new life and purposes.

You crawl easily and slowly up this pass, not at great apparent cost of railroad energy. It is winter on the east side of the pass. You slip through the great Mullin tunnel, and begin to coast down into another land, into another empire of this great country, the empire of the Coast, as distinct from the life of the east side of the Rockies as is the latter from that of the Old World. At the right of this half mile is winter. At the left of it is the breath of spring. You are in Chinook land. Not brown and gray, as you saw it an hour ago, the face of the country is bright and vivid in its coat of green. It is April, and you have left the tin-can belt of the east slope for a land where you catch a suspicion of lettuce and spring "greens" upon the air. Surely this is a great and wonderful land of ours.

#### Missoula, Montana.

When I got to Missoula I was pleased, for a more lovely spot for a town never was on earth than this sheltered, green corner of the mountains, this valley hid under the arms of the Bitter Roots. After the continual panorama

of snow and ice from which I had just come, the warmth of the air and the green of the landscape gave a feeling of relief and comfort. I could not help thinking of the verse, "Fair as the garden of the Lord."

I didn't know anybody in Missoula, or at least I didn't know I did. So at the hotel I asked the clerk for the name of some one of the local sportsmen. "Why, there's one of them right there in the billard room now," said he. "Mr. Jones, Tom Jones. He'll tell you all you want to know."

I walked in and introduced myself to Mr. Tom Jones, and found myself looking rather hard at him and him looking pretty hard at me. "I think I've met you before," we both said. And it was so. One rainy day at the World's Fair Frank Webster of Lawrence, Kan., had introduced me to Tom Jones, out near the gates, and now I remembered it clearly, so after that I was right at home in Missoula. With Mr. Kenneth Nicoles, a young fishing attorney; Mr. Will Cave, a big-game hunter of approved and permanent reputation; Chas. Emsley, the local taxidermist; W. H. Wright, also taxidermist and mountain guide, and the many friends of all these, I was clearly, to use an expression of Mr. Horace Briggs of 'Frisco, "right in the heart of the city."

### The Carlin Party.

Missoula itself is right in the heart of the mountains. The range of the Bitter Roots is extremely rough and broken, and though not subject to so heavy a snow fall as the mountains east of the main divide, these mountains are very lofty and difficult of access. It was in this range that the Carlin party had their trouble, and at Missoula I heard over and over the details of that unfortunate affair. W. H. Wright, whom I met at Missoula, is the partner of Spencer, the guide who took the party in, and Wright was the head guide of the military relief party which worked from the east side of the range in the attempt to get at the lost party, the effort, of course, being made over the east slope of the Lo Lo trail. There were seventy men in this Eastern expedition, Wright told me, and they failed because supplies could not be gotten forward to them fast enough over the trail. The streams rose and flooded the valleys back of them, and the snow ahead stopped the horses. Of course I don't know anything about it, but it seems to me that a party of four determined men on snowshoes could have pushed on over to old Jerry's cabin from the point which Wright reached on the east side of the trail, eighty miles above Fort Missoula. Meantime the party that went up the opposite side of the trail, or the South Fork of the Clearwater, were proving successful. There seems to have been very little snow to hinder them on that side, and Wright says they could all have walked right on out if Colgate had been able to travel. They got thirty miles down the Clearwater by their raft before Colgate was abandoned, and they were forty miles below where they left him when they met the search party. By that time they were practically out of danger, and nearly to the fork of the stream, where they would have been safe. When found, Spencer was about four miles ahead of the next man behind him on the trail, and the others were scattered, each man for himself. Carlin had given up hope for the last two days. Colgate had refused to stay in the mountains with old Jerry, the trapper. At the time the westward march was begun, so Wright told me, there was deep snow on the summit, but not enough on the lower trail to impede them altogether. The snowshoe and sledge idea seems never to have been entertained at all. At a rough guess I should think this would have been better than the raft proposition. At any rate, the affair was deplorable in any light, and it had created the most intense feeling at Missoula. Later than my visit a party went in to look for Colgate's remains, and made due report that they had been swept away by the floods. And now comes Lieut. Green and says that he met Lieut. Elliott in the Bitter Roots in September, and that Lieut. Ellott had found Colgate's remains and given them burial. This is the final chapter of one of the most widely known and one of the saddest stories of the mountains.

### Big Game.

The Bitter Root Range is good game country, and offers elk, deer, sheep and some goats. It is well spoken of by the local men, though all agree it is rough country and hard to hunt in for a great part of its extent. I somehow got the idea that, while Missoula would be an excellent point to head for for a big-game hunt, it would be better to go the north, up beyond or near the Flathead reservation country, and this would certainly be better if one wanted to get his goat. Mr. Emsley assured me that it would be no trouble to find goats in the country to the north where himself and friends had made a recent trip. He showed me a number of fine skins and some mounted specimens which he had taken on that trip, and moreover showed a number of beautiful photographs taken by himself of trophies, camp scenes, etc., all of which served to make one want to start at once for the same country.

### Trout.

Mr. Jones told me fish stories by the hour while I was at Missoula, and one who knew nothing of the wonderful fruitfulness of these mountain rivers would hardly credit in full all the statements as to weight and number, though I do not believe that, large as they run in these waters the average of the mountain trout here is as large as it is in the Clark's Fork or the Rosebud, on the other side of the range, of the waters of which I have made earlier mention. But 2 or 3lbs. is big enough for trout to get if one is not anxious to go into a general freight and traffic business, and I should think the jolly sportsmen of Missoula and all the Army officers at the Post near-by would congratulate themselves and thank their lucky stars, every day of the fishing season.

Missoula was also suffering from the drop in silver, and everybody talked poor, though I noticed she was a wide-open town at night, with plenty of the green cloth and hurdy-gurdy features which seem to constitute a necessity or at least make an index of a fairly healthy state of affairs in a city of the mountains.

About every man in Missoula is an angler, and a good fly-caster, too, and of course the average man would be handy with a rifle. There is a trap-shooting club of good membership there—about the last place in the world one would think such a club needful or likely to flourish. FOREST AND STREAM tells about the doings of this club, among its other items from the far West, and readers may see that the Missoula men take mighty kindly to the shotgun, too. Their local champion of renown, Mr. Rogers, is willing to go into the lists with any comer, and is well known in the meetings over the State. Missoula will no doubt eventually go into the Montana State Association, if indeed she has not already joined.

An odd sort of shooting club at Missoula, and one whose like I do not recall for any part of the country, is the "Ladies' Twenty-Two Club," a collection of ladies who go in for target practice with the little rifles. This club has a membership that varies from a dozen to twenty, and several of the ladies do exceedingly close shooting with the small weapon, moreover.

### Mongolian Pheasants.

About the time I was in Missoula, Dr. Mills and Mr. J. Menard were beginning the experiment of introducing the Mongolian pheasant into the Bitter Root Valley, and there was talk of trying to acclimatize the Bob White quail. I hardly believe the Bob White would do well in that region, but the general conditions of climate would seem to make it a practical certainty that the Mongolian pheasant would thrive there as well as in Oregan. I have not since heard, but would like to hear, of the result of this interesting experiment. This bird is attracting much attention among the sportsmen of the country, and is destined to attract more in the future. Of the introduction of this bird in different localities in the East accounts have from time to time appeared in FOREST AND STREAM. The latest attempt of this kind, of which I have knowledge, was made by Mr. Howard Bosworth, of Milwaukee, Wisconsin, who has reared a number of the chicks of the Mongolian pheasant on his place, about twenty miles out of Milwaukee. He thinks the birds will stand even the rigorous climate of that State, and if so they should do well in the Bitter Root Valley of Montana.

### The Prize Fool Law.

At Missoula I heard considerable vigorous comment among the anglers on the absurd Montana fish law. This law, I suppose, has been the cause of the destruction of mountain trout to an extent not equaled by any other agency. It is well known that these spawn in the spring instead of in the fall like their Eastern cousins, the brook trout. The spring also is naturally the time when the farmers turn on the water in their irrigation ditches. Following their natural instinct the fish run out into the irrigation ditches and find their death floundering in the meadows. It is impossible to estimate how many tons of these noble fish are thus destroyed every year in Montana. One of Marcus Daly's trainers says that one morning he picked up two gunny sacks full of trout which were flopping around in the shallow water of the ditch overflow back of the barn on one of Daly's places. The Silver Creek ditch, fifteen miles long, is one of the great destroyers of the trout. Tubs full are picked up there daily and fed to the hogs during the spring run of the spawning trout. Naturally the sportsmen of Montana, and all who have any decent interest in the preservation of animal life, sought to put an end to this outrageous destruction of fish valuable alike for food and sport, but more especially for food. They knew that these fish were fed in tons to the farmers' hogs and sought to preserve them for food of human beings, as a use more natural and advantageous.

Going before the Montana Legislature, they introduced a bill which should provide for the shutting off the heads of the irrigating ditches by means of grates, which should keep back the fish during their running season. Their bill provided that the gates should be put in at the heads of all ditches on March 1, and removed Sept. 1. The Montana Legislature, however, being composed of a lot of brilliant jays, concluded that they knew better than the intelligent element of Montana citizens who had introduced the bill. One of them said he did not think all the fish in Montana were worth over $80 at the most. The Legislature then proceeded to amend the bills introduced, and actually passed a law which is now on the statute books of the State of Montana, completely reversing the provisions of that bill, and making it obligatory to put the grates in at the head Sept. 1 and remove them March 1. There is no such deliberate and malignant provision for the wholesale and abominable destruction of fish life to be found in the history of all the senseless and absurd protective legislation of this country. The Montana fish law now provides as follows:

Unlawful to fish at any time except with ordinary fishing tackle. Nets, seines, grab hooks, powder or poison strictly prohibited.

Unlawful to fish in any manner or with any contrivance or device during the months of May or June.

Unlawful to sell, offer to sell, display for sale or purchase at any time, brook, speckled or mountain trout.

All ditches and drains leading from natural streams must be protected with grates at the junction of said ditch and stream. Grates must be placed Sept. 1 and removed March 1.

Fishways or ladders must be constructed at all dams.

The provisions and penalties of this act apply also strictly to all Indians and half-breeds when outside of an Indian reservation.

At first glance this would appear to be a good fish law, but any one knowing the habits of the mountain trout, and the extent of their destruction in the irrigatiag districts, will know that its main provision is absolutely and cruelly wrong, and will join in the general indignation of intelligent Montana citizens at the passage of such an act.

### Foreign Butchers.

The growth of a sentiment of strict observance of the game laws will probably be slower in the Rocky Mountain region than in almost any other part of the country, for reasons which will be obvious, and which to some extent base themselves on absolute necessity. Nevertheless, it is not to be supposed that Montana men look with indifference on the wanton and unnecessary destruction of their big game. There is much protest at the invasion of the State by Eastern hunters, who kill all and everything they can.

The European sportsman is especially loathed and detested in Montana, it must be said with good reason, in view of the record of the past. Of this I will give one instance where names and facts are at hand, although the greater part of the killing was not done in Montana, but Wyoming. A year and a half ago a party of German so-called sportsmen came over to this country and went to Montana for "sport" as they understood it. They divided into two parties. One party, composed of L. V. Feilitzch, Premtrent Dietrich, Graf C. von Blücher and Graf Pocully, hunted in northwestern Montana, with A. Pfhal and F. Black, of Fridley, Montana, as guides. They killed only a few head of game, all their elk, of course, illegally. The rest of these men took Curly Rogers and A. G. Vance as guides, and went into Wyoming. Their names were Graf von Leppelin, of Stuttgart, Germany; G. Meisenbrand, T. Fery and H. Bothe, of München, Germany. These men committed one of the most abominable pieces of butchery of which itemized account has ever been kept. They hunted on Atlantic Creek and Elk Ridge, near the south line of Yellowstone Park. They killed between thirty and forty bull elk, and all they did was to knock off the horns from the skull. All the bodies were left to rot, and even a greater part of the antlers were abandoned later on. The man Fery said publicly that he had killed twenty-six bull elk himself, and that the "sport" was so great that he intended to bring over a larger party from Germany the following year.

### Such Butchery Must Stop.

The day is past for such outrages as the above, even in the wildest part of the Rocky Mountains. Even if it were not true that the modern phase of sportsmanship has penetrated thoroughly all the larger towns of Montana, even the old mountain men of the remote districts will now rebel at hearing of such slaughter as that. Foreign butchers of that type will henceforward run greater and greater risks each year in that region in their expeditions for the purpose of violating alike the statutes of the State and every feeling of human decency. If legal measures cannot be taken by the organized sportsmen of Montana (for this year the sportsmen have organized themselves into a State association) then let us hope that the mountain men will follow the example of Colonel Pickett, of Wyoming, and take the enforcement of the game laws into their own hands. If a few of these incredible foreign butchers should at some future date be found rotting in the mountains on their own slaughter fields, I can imagine that no injury would result to the world therefrom. I believe this hint may be of use to some of these persons who come over for the purpose of slaughtering all the American game they can. The mountains have secrets which they do not tell. For my part I should not be torn with grief at the thought that the grave of any of the above party of marauders was to remain forever unknown and unmarked, and he to have no further epitaph than the record of his doings recorded in the sentences above.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

---

### From a Business Point of View.

THERE are laws that some people think more honored in the breach than in the observance. One of these is the game law. During the past week there have been several good sized consignments of venison sent out of the State by local commission dealers of fair reputation as law-abiding citizens. The law is a recent one, but there is no reason why it should not be obeyed just because it is young. The man who fails to obey a law that is made to be obeyed, is a criminal, whether the law is one regulating the shooting and sale of game, or the buying and selling of beer, or the misappropriation of horses. It would be well for the country shipper to ascertain if he can if the commission house to whom he consigns his produce is actively engaged in trying to evade the game law. If so, he may be on the look-out for that same house to try to evade the law compelling the debtor to pay his debts. "False in one, false in all" is a very good proverb to apply to the man who is entrusted with your property. —*Commercial Bulletin, Minneapolis, Minn.*

### A Turkey Call that Calls.

IN the FOREST AND STREAM of July 10, 1890, was a diagram of a turkey call with explanatory article signed "H. L., Kankakee, Ill." If "H. L." is still a reader of our paper will he please accept my thanks for the best call I have ever used, and I have used wing bone, section of cow horn, and the commercial article of wood and horn combined, but with the little box one can e'enamost call a turkey out of his feathers. The directions were to use the call on the stock of the gun, but I found a better place to be the metallic plate just forward of the trigger guard. I am more sure against a balk there.

If any one has occasion to look that diagram up, for "$\frac{3}{8}$in. long" read "$3\frac{1}{3}$in." And I would change the last paragraph to read, "The wide part of the projection, or the lip of the back cover, should be furthest from the person, or that grasped by the forefinger." I can't work it satisfactorily any other way. O. O. S.

---

### Leased Lands and Quail Netting.

THOMASVILLE, N. C., Dec. 5.—There are two very good game or shooting clubs here. We have 10,000 acres of excellent shooting ground, and there are plenty of birds this season. We have eight members only. The other club has a larger membership and have 15,000 acres adjoining ours. They have built a very fine club house and stables at Thomasville. Our members put up at the hotel. The farmers of this section are exerting themselves in preventing the netters from depredating and taking their game without permission. They deserve credit for the manner in which they protect the leased land against intruders, and before long a precedent will be established by their efforts which may prove to be absolute protection to the sportsmen who pay their money for the privilege. J. W.

---

### Shooting Chain-Shot.

LITTLE ROCK, Ark.—I have often seen the question asked how to load buckshot to shoot out of a chokebored gun.

Jerry C. South, a noted deer hunter of this State, gave me his way, and he claims to be able to put 15 No. 8 buckshot in a 10in. circle at 70 to 80yds. His formula is to use a gut fiddle string, and cut and string the bullets on (the same as you would if putting a split-shot on a fishing line), far enough apart so they will chamber five in a layer, tying the ends of the string together. The shorter the string the closer they will hold together. A deer up to 90yds. struck with this load is a dead deer. He shoots them out of a full-choked 12-gauge. IRWIN.

### To Go to Sleep.

*Editor Forest and Stream:*

"J. H. D." in his article, "To Go to Sleep," forgot to mention that in order to assume the attitude he describes, one must be a contortionist. J. H. W.

PHILADELPHIA, Pa.

## OREGON NOTES.

PORTLAND, Ore., Dec. 1.—Wildfowl shooting, so far, has been a miserable failure in this neck of the woods, except where hunters have resorted to the reprehensible practice of seducing the ducks with wheat. Either the wretched carp or the summer floods, or a combination of both, have obliterated every vestige of food from our lakes, and our hunters can only mourn for the days that will never return, while hoping, vainly hoping for something, anything, to happen that will send the millions of wildfowl inland. Not for twenty years have there been more wildfowl than now. But they stay down along the coast—Gray's Harbor, Shoalwater Bay and Tillamook. Will Ladd, Tom Farrell, the Honeyman boys, Joe Paquet and a few others have secured fair bags, but generally in questionable ways, for this wheat feeding will doubtless ruin the best of lakes in time. However, the boys rightly plead in extenuation: "No wheat—no ducks."

---

Grant Patton and the Burrell boys, Walter and Herman, have been stirring up "broder b'ar" in a lively way of late. Recently I saw in FOREST AND STREAM an account of Walter Burrell's dogs killing a bear outright near the city. That was entirely correct. No better bear dogs ever sniffed a trail than these same dogs. Patton's are nearly as good. While it is a recognized fact that "blood will tell," there is little doubt that training and experience will tell as much more.

You see, Grant caught a young bear some time since and the boys wisely used the captive in training their dogs. They would take this bear a long trip through the woods, and then, after letting him climb a tree, they would turn the dogs loose at home and they would do the rest. At first they would tie the bear to the foot of the tree, but it wasn't long before they discovered that the dogs were too much for him, and they had to give him more rope.

Grant has gone to the Coast Range with his dogs to hunt bear all winter. The bear do not den up there as they do in colder countries, at least not so completely.

So "O. O. S." has been killing wild turkeys down in the Ozarks. He wrote me that he had killed six, and a few days later, just before he returned to Fredonia, he wrote that he had killed two more, one weighing 12lbs. Brother Smith always was a lucky dog. You remember how he got away with the cougar with a hand spike down on the Pilchuk? Wasn't that lucky? You know it isn't every fellow that could get out of such a scrape without a scratch. But to return to the turkeys. Do you know that I would rather kill a great big wild gobbler than to kill a big bull elephant? Honestly, I envy Brother Smith his good fortune in securing such game, for the day is not far distant when the turkey will be reckoned with the buffalo, a thrilling memory of the fading past.

---

Bill Newman is just up from the Scantogrease, down along the Columbia. Of course he has entertained us with the usual assortment of bear and cougar stories, but nothing he has ever told in my presence before quite equals what he now relates regarding some of his late experiences with the calico Chinook salmon. The idea of hunting Chinook salmon with a club and bulldog! Various and numerous have been the methods heretofore resorted to for their circumvention; but club and bulldog is certainly a new departure. And then, too, a *trained* dog! Just think of a dog, bull or otherwise, being trained so finely that he will allow himself to be dragged to the bottom of a twenty-foot hole by a three-foot salmon, but finally land him. And strangest of all, I believe that this yarn is, in the main, true. Notwithstanding Bill's disposition to exaggerate, his yarns are generally founded upon fact.

S. H. GREENE.

## ON LITTLE RIVER.

WHAT is known as the Three States Club is a variable company of good friends who go annually on an outing in Arkansas or Missouri. This year there were even twenty in the crowd, and it would be hard to find a happier, merrier set. Dr. A. T. Hobbs is the recognized leader of the club, while E. P. Fonville, J. L. McGlothlin, George Dent, Wellington Etheridge, J. L. Farmer, J. D. Ladd and others of like character make splendid seconds in everything that goes to make up first class gentlemen, hale, happy camp-fellows. There is nothing small or impecunious about them. It is a pleasure to be out with such men.

On the 7th of November the Cotton Belt R.R. landed us in good style and good time at New Madrid, Mo. Here we took wagons for what is known as Highland Campground, on Little River, in New Madrid county, Mo. The water in the river was nearly all gone, and we saw at a glance that our prospect for duck shooting was a slim one. The section is specially favorable for that sort of sport when there is anything like a favorable stage of water. But the season had been so dry that the whole country was dusty, and the wagons drove across the bed of the river as if it had been the public highway. We struck camp about sundown, and while part of the crowd was putting up the tents and looking after supper, three of them were detailed to see what about the fishing in the hole of water near by. We had a trammel net with us, and as the quickest way to get fish for supper the boys undertook to set it and make a drive. But imagine their surprise to find before they had the net more than half out it was so full of fish they could hardly handle it. They soon took out enough for supper, and the next day we found that the great quantity of fish usually in the river had been compelled to get into the holes left by the dry weather, and they were actually so thick in these holes that they were hardly fit to eat. Nice perch and bass were there in great abundance, but the vast number of them rather disgusted the crowd, and we gave but little attention to them after the first day in camp.

On the morning of the first day in camp several of the party went to the woods, and others up the river, prospecting in both directions, to see if there was any game on land or water. Lhe woods were all ablaze with forest fires, and the game could not be expected to be very plentiful under the circumstances. But at the close of the day we had one quail, two opossums, four coons, six squirrels, six ducks and seven turkeys. This gave us plenty of eating, and we were in good spirits for the camp chat that night.

The next day the luck was dull, however. A few ducks and squirrels was all we had to show for some very hard and faithful hunting. It had been fully decided that there were no deer of any consequence in that immediate neighborhood, and as a part of the club wanted to get some deer, they decided to move down the river about fifteen miles to a place called Clay Root. So on Monday morning early fourteen of the twenty started to the new quarters. They got into camp in good style before night, and early Tuesday morning they began to see what was in the country, and before noon they had four nice deer hanging in camp. They remained there three days and got seven deer and nineteen turkeys. They had a good hunt and found game reasonably plenty, considering the dry weather and widespread fires. Those who remained in the camp at Highland left in a day or two for home because there were no ducks or other game to shoot. The morning they started out they went out early and killed thirty-two squirrels in about an hour's time.

We were in a fine section of coutry for hunting if we had had an ordinary season for it. But the dry weather had dried up the lakes, rivers, ponds and everything until there was no water for either ducks or geese. We saw millions of ducks passing over us, going in quest of feeding grounds, which shows that this territory is in their line of flight, and if there had been water and feed they would have called on us. But there was nothing to stop for and they didn't stop.

One of the members of our club, Mr. T. Brent, of Cairo, Ill., is fitting up a boat that will carry about twenty-five hunters comfortably and he proposes to take us on our next outing. His plan is to run from Cairo to the mouth of the St. Francis River and then coast up that river till the crowd says enough. As the St. Francis River is one of the best in the land for fish and ducks, we are sure to have a good time. Along the shore of the river are large canebrakes and splendid deer woods, and such of the party as wish to kill deer will be accommodated in the best style. We can hunt all day and sleep on the boat at night.

While on this outing I heard of a man who has invented a duck net, with which he catches thousands of ducks every day. He feeds a small territory for several days until he gets the ducks to using there in large numbers and then he has his net so arranged as to throw it out in the twinkling of an eye and get as many as 275 at one drive. It won't take long to dispose of the duck question at that rate. The shooters of that section are kicking on the netting business vigorously and it is hoped will stop it.

There are some laws in Missouri against foreign hunters that might sometimes give parties trouble. These laws are practically a dead letter, however, as the people themselves do not favor them, and any officer who thinks of prosecution under them is regarded by the people as a hard man. We had no trouble, though we had some natives with us who hunted with us all the time.

J. N. HALL.

---

## BOSTON AND MAINE.

BOSTON, Dec. 9.—Mr. E. Frank Lewis, of Lawrence, Mass., is a great lover of fishing and hunting. He is a member of the celebrated Monomoy Brant Club, and his record each spring is a good one. He has made a very successful deer hunt in Maine this fall, going in to the vicinity of the Ktahdin Iron Works, I believe. He secured his one or two deer fairly and squarely. No dogs were used, though it was early for still-hunting.

Mr. C. J. Bateman is another enthusiast concerning fishing and shooting in Maine. He visits the Upper Dam nearly every spring, where, with his friend Patrick Kelley, he makes a good record. This year he could not resist the temptation to try for a deer. Soon after the first snow he started for Rangeley by rail. But here his trouble begun. The lake steamers were not running. With Frank Philbrick as guide he hired a team to take him around by land to Haines' Landing. Here he staid over night, for no steamers were running on Mooselucmaguntic, and there was danger that the lake would freeze over every night. With a boat and four oars they rowed down the lake to the Upper Dam, the point Mr. Bateman desired to reach. Here he found that but little hunting had been done, and that the woods were about as full of deer as one could well imagine. Mr. Rowell, so many years the manager of Sam Betton's steamer, was hunting with a son of John Chadwick, and they had obtained one or two deer. There was a miserable crust over the snow, which, in the terms of the hunters and guides, makes a "crunch, crunch," and deer hunting was extremely difficult. Mr. Bateman says that the number of deer in that part of the country is something remarkable. The snow was covered by tracks, and it was easy to find the deer; but the "crunching" of the snow crust made it impossible to do anything else than "jump them." Snap shots were tried without success. He hunted for several days, till at last his efforts were crowned with success. He shot a deer that dressed 115lbs. Then he desired to get home. But the lake was partly freezing every night, and it would be folly to attempt to get out with a boat. The only way was to wait for the lakes to freeze, much as he desired to get home for Thanksgiving. At last the lake below the Upper Dam seemed to be solid, and with the deer on an improvised jumper some 8ft. long, one guide on skates to draw the jumper, another with a hand sled to draw Mr. Bateman's baggage, they started on the fourteen-mile trip down Richardson's Lake to the South Arm. The reader acquainted with that locality will remember that there are no roads to the Upper Dam, the only means of communication being by way of the lakes, either by boat or on the ice.

They found the ice all the way from 1½in. to 4in. thick. Mr. Bateman had no skates, and often the guide ahead of him would pass over a section of ice so thin as to bend and crack beneath his weight. He would shout to Mr. Bateman to "take care!" and that gentleman would go around the dangerous spot on the shore or so near to it as to be comparativeiy safe. Once the ice actually broke under one of the guides as he skated over it. He threw himself headlong, so as to bring his body lengthwise on the ice, and managed to crawl to where the ice held. He got a little wetting, but considered himself fortunate, as the water was very deep where the ice begun to break. At last the South Arm was reached, and Mr. Bateman was fortunate enough to fall in with one of Thomas's teams, and to get passage to Andover. He reached Boston last Monday, with his deer all safe, and greatly pleased with hunting and adventure in Maine.

Mr. Harry B. Moore has just returned from New Orleans. His business was ostensibly to look after cottonseed meal, but he never loses an opportunity to try the hunting and fishing wherever he may be. Invited by Mr. Adams, of the Marshall Shooting and Fishing Club, they went up the Louisville & Nashville Railroad thirty-six miles to Pearl River, which is really one of the outlets or Rigolets of Lake Ponchartrain. Arrived at the club's preserve they went fishing. They were to catch "green trout" and "speckled trout." Soon they had a "green trout." It gave a few dull flops and gave up the fight. Harry had to laugh when he landed only a big-mouthed black bass with a slight greenish tinge of color. Next they caught a "trout" or "speckled trout." But this proved to be nothing but a weakfish. It was a rather poor sample of trout for one who has landed an 8-pound Rangeley trout at the Narrows of Richardson Lake and has loaded his 4-pound Moosehead Lake speckled trout with railroad spikes in order to beat the minister, who was high line up to that time. Excuse Mr. Moore if he considers the Southern trout fishing a little tame, though the weather, the scenery, and Mr. Adams's entertainment was all a Northerner could ask.

Some monster moose have lately been taken in Maine. Mr. G. E. Crocker, of Fitchburg, Mass., has lately taken one of the biggest moose on record, at the Oxbow, in Aroostook county. The animal is estimated to have weighed alive 1,400lbs. The horns spread over 5ft., with palms 13in. wide. There are 14 perfect prongs on each side. The Boston & Maine railroad is also showing a remarkable moose picture in the window of its Boston office. It was taken at the North Twin Dam.

In the town of Stoneham, Me., according to the papers, forty-seven deer have been killed this fall. In Bethel, Gilead, Mason, Newry and Grafton, 150 deer have been taken this season. The above may be added to the estimates I made last week, making nearly 200 more. The record is most remarkable. The above towns I remember as a boy. Thirty years ago the killing of one deer in either of these towns would have been considered remarkable.

A Waterville, Me., dispatch says that on Sunday, Nov. 25, the town of China was thrown into excitement by the appearance of a deer being dogged into the lake close to the village. A couple of hunters were following, and many of the village men and boys also turned out. The deer was killed, a handsome buck. But the authorities got hold of the story, and Constable Pollard arrested the hunters, Messrs. Pease and Butterfield, took them before the Municipal Court, where they were fined $4.87 each, for hunting on Sunday. Judge Philbrook, before whom they were tried, does not seem to have taken any notice of the fact that the hunters were illegally dogging a deer.

SPECIAL.

---

## RUNNING DOWN SOMETHING ALIVE.

### An Episode from the Texas Book.*

GOLDSMITH'S "Sweet Auburn" is Texana. This place contains the ruins of twelve or fifteen houses; some only slightly out of repair—a door or window gone—others ready to fall at any moment, and still others in a state of collapse. We took a stroll through the forsaken streets, and entered nearly every building. All were unoccupied, and our voices echoed and re-echoed through the rooms with such a hollow, distressing sound, that we unconsciously refrained from talking while within them.

We examined every house, shed and hen-coop; explored every street, alley and door-yard, but not a sign of life could we find about the place.

"Now, I'll be dog-on'd," said my partner. "This is the deadest town I've struck yet. Here's houses enough for forty. I'd like to see some soul stirring about, if 'twa'n't more'n a dog."

"Why are you so anxious to see somebody?"

"I want to see something with life in it, and if I caught glimpse of a man I'd run him down if it took a week. What's that!"

"What's what?" I asked.

"I seen a pair of nigger heels flip around the corner of that shed there. Hey, you black devil! Come out of there!"

Priour dashed off in the direction he had pointed out, and I soon saw a negro rush up one of the streets, followed closely by my comrade who continually shouted: "Hold up! hold up there! Head him off, you fool!"

The race was an exciting one—across streets, through sheds, over wood-piles, under fences, and around houses. Absalom kindly lent his assistance in the chase, and following close to his master's heels, he occasionally stopped barking, long enough to seize the pair of legs in front of him, and strip off a piece of breeches.

The dog knew something was up, but didn't seem to know what nor whom to assail; and being better acquainted with his master than with the negro, he vented his rage upon the former.

This was displeasing to Priour, and several times when almost within grabbing distance of the runaway, he had to stop and administer a kick or two to the animal who possessed such a "wonderful memory." This punishment had only a temporary effect, and the intelligent canine would soon be as interested in the charge as before. The negro was running as for his life, and as I saw him enter a building which had no visible opening save the one where he had gone in, I believed the chase to be at an end. But not so. The fugitive was a butter, and as Priour entered the opening, the negro's head crashed through the other side of the house, and mid the flying boards and shingles he made his exit into the world again. Priour soon followed by the same butted opening, and the running contest was in order again.

I made it my business to move about just enough to keep the men in sight, and several times I wished myself on the top of some chimney, where I could have an unobstructed view of the struggle. I had no interest at stake on the result, and I didn't care to "head him off." I was too much afraid of that head to try and intercept it, for I had already seen what it was capable of going through.

In the end Priour proved to be the better runner, and after the fleeing negro had carried away several sections of rail fence, lost his hat and shoes, and hung his clothing in various places about the town, he was my partner's captive. Both were now panting for breath, and as I approached they seated themselves face to face upon a pile of boards.

I hadn't the slightest idea of what Mr. Priour's object

*A Man from Corpus Christi. The adventures of two bird hunters and a dog in Texas bogs. Forest and Stream Pub. Co.

could be in chasing the man, but supposed it to be some sudden fancy that had possessed him to do such a thing.

"Why didn't you head him off?" were the words that first greeted me.

"What do you want that man for?" I asked. "Didn't you know there was a law against kidnapping?"

"Now, this here ain't no kid. He's a black goat, and there's no law in Texas against goat nabbing. I want to know about this town!" and addressing the negro he continued: "Where's all the folks that live about here? What've you done with them?"

"Dey no be here any mo'. Dey dun gone up de kreak."

"What 'd they go up the creek for, you hound?"

"De houses all dun blown down, massa, an' de county seat kerred up dar, too."

"Why didn't you stop when I told you to."

"Good Lawd, I nebber seed de likes. I thought you chicken thief. Lem me go, an' I neber do dis scrape agin."

"Well, the next time I tell you to stop, you stop! I'm from Corpus Christi!"

"Yes, sar. I knowed you's from Corpus Christi—no man roun' here run like dat. Dis nigger hab long feet, but he no git ahead ob Corpus Christi man. I dun stop next time, boss, sho!"

Turning to my partner I said: "Now you've pumped your man and are satisfied about the emptiness of these houses, let's go to camp and have some dinner. I'm hungry."

---

I took a long walk down the creek. The heavy timber entwined with many vines reminded me of the San Antonio Bottoms. The further I went the more I increased my regard for the tall aged trees which, hung with sheets of the ever-present whitish moss, seemed to stand about like so many hoary monuments to time. Their majestic size, their rough and fissured bark, and their twisted and pendant branches, all bore evidence of the many changes of season, the countless storms, and the frequent violent shocks they had known. The air was calm, and but for the hum of thousands of mosqitoes' wings, the swamp was as silent as a tomb. During my long walk I had seen but two or three birds, and these few were very timid, flying at my approach.

Everything in the vicinity shared in the gloom thrown about the deserted village, and, with few exceptions, animal life must have migrated with the people who once occupied the town. We had been eight or ten days at a time without seeing any human being but ourselves, but I had not known a place so sepulchral as this, where even the leaves seemed reluctant to flutter, and as I picked my way through the over-abundant undergrowth, hearing only the tread of my own feet, I thought of myself as trespassing upon some forbidden soil.

Emerging from the wood I found Mr. Priour seated upon the ground, busily engaged in repairing the rents Absolom had made in his trousers. We often found it necessary to mend our clothing, and generally employed a darning needle threaded with twine, while for patches we used empty grain sacks or anything else we could find. My own trousers had been patched, patched and quilted until the material of which they were originally made was completely hidden from view, and the stripes which once adorned my partner's nether garments were one by one being buried in rags of other and less brilliant hue.

"Have you been out with your gun?" I asked.

"Yes, I went up the stream a little, but there wa'n't a bird to be seen, and I thought I'd mend my pants where they caught on that nail."

"What nail?" I asked.

"What nail? Why, a nail in that dog-on'd nigger house across here; didn't you hear them tear when I went through the hole that coon butted?"

"No, I thought Absalom tore your pants."

"You thought Absalom tore them? Well, he didn't! How could he tear my pants when he had hold of that kicking coon?"

"I didn't know he touched the fellow, I thought I saw him at your heels all the time."

"Well, you didn't! He wa'n't anywhere about my heels. He was helping his master, and I'd never caught the black hog in a week, if the dog hadn't turned to and bent on with me, which was enough sight more'n you done. What was you doing all that time anyway! You stood as still as you was having pictures taken. Was there anybody around there taking them? Ha! ha! ha!"

"No, I was taking your picture in my mind though, and if I remember aright, Absalom wasn't far from your legs all the time. Didn't you turn around three or four times and kick him away from you? If you didn't, what made the dog yell the way he did?"

"He yelled when he caught the nigger's throat, and that yell meant 'I've got him' just as plain to me as though he could talk. He knows niggers as well as I do, and I know them as well as ducks."

"Where is the man now?" I asked.

He's gone back into his hole, I guess. I gave him two minutes to get across the stream and out of sight before I'd sic the dog on him, and if you ever saw a black streak streak off, 'twas him after he saw that dog's eyes and teeth. Absalom was just dying to get another grab at his throttle, and I had to hold him till the cuss 'd gone."

Mr. Priour finished his praise of the dog and the mending of his trousers at the same time, and he felt proud of the style in which each had been done.

"I tell you!" he shouted. "There's a patch that's put on to stay, and looks a blame sight better than it did before that fool of a dog—that fool of a dogged nail caught in it up there! I'm a patcher!" and he triumphantly waved his breeches aloft before getting into them again.

WANTS TO TALK TO HIM.

## MICHIGAN DEER.

MANISTEE, Mich., Dec. 3.—*Editor Forest and Stream:* The deer hunting season has come and gone. In the Lower Peninsula it begins Nov. 5, and closes Nov. 25; but the hunter is allowed ten days for "getting his game out of the woods." This means, with most hunters, just ten days more for getting game to bring out.

The season which has just closed has been a peculiar one from the fact that it was ushered in by a heavy snow storm which piled up the snow to the depth of a foot or more. There has very seldom been any snow during the deer hunting season; sometimes an inch or two during the last few days. This year it was present, in more or less quantities, during the whole season. For the first week the wind blew a gale, driving the frozen snow into the hunter's eyes, obscuring his view and making things decidedly unpleasant for him in camp as well as in the field. The snow was of great assistance to the still-hunters; and those who had the courage to face the wintry blasts met with pretty fair success. On the whole, the deer hunting has not been as good as usual this season. With the snow to help in tracking the deer, more should have been killed than for some years. Our party had about its customary luck, but other parties hung up only half their previous bags. Some were completely "skunked." All the old hands are puzzled to account for the shortness of their counts.

Nearly all the deer killed were bucks, very few being does or fawns. As the forest fires last summer were unusually extensive and severe, owing to the long drought, some think that the does and fawns were overtaken and destroyed, to some extent, while the bucks, which were growing their horns at that time in the dense swamps which were too wet to burn, escaped. I am inclined to think, however, that the stormy weather drove the does and fawns into the very thickest cover, where they remained until the weather moderated toward the close of the season. The fact that many deer were seen on the last days where very few had been found previously, seems to bear out my theory.

The bucks, being stronger and under the influence of the passions which sway them at that time of the year, moved about more freely and were gathered in. Several bucks were killed that had "swelled necks," and a rutting buck with a "swelled neck" has as little caution as some men with "swelled heads."

In passing by one of our city meat markets one day I saw hanging at the door a buck whose horns, seemingly fully grown, still retained their velvet. It was perfectly dry, but smooth and unbroken. I have never seen nor heard of a buck carrying horns in the velvet so late in the season, and many old hunters declare that they have not. I think the buck must have been troubled with that "tired feeling."

Speaking of this freak reminds me that Mr. Michael Gallagher, of this city, killed a doe last season which carried a small pair of horns. I was incredulous when told about it, but so many reputable persons saw the deer and vouch for its being a doe with horns that I am compelled to believe it. F. A. M.

### Luck in Maine Woods.

LEBANON, N. H., Dec. 6.—Charley Marston, with his friend, Dr. House, of Boston, of Nova Scotia moose fame, returned last Monday from Holeb Lake, Maine (Birch Island camp). They were quite successful. Our Charley was always a lucky dog, and he kept up his reputation this time, as he only hunted about two and a half days; got three shots and killed two nice bucks and a doe. The Doctor had to be contented with one buck. Not many foxes killed about here as yet, and only one deer that I have heard of. MASCONY.

### Caribou Abundant in Quebec.

PORTNEUF, P. Q., Dec. 5.—My woodsman writes: Il y a de caribou cette année comme il n'y en a jamais eu"

The Quebec *Chronicle* of to-day says: "Messrs. John D. Gilmour of Quebec, and Allan Gilmour of Ottawa, have returned from a most successful hunt. The sport was very good throughout, and a few fine heads were brought home. The hunters experienced rather severe weather. They report caribou very plentiful." G. DE MONTAUBAN.

### Down Barnegat Way.

BARNEGAT, N. J., Dec. 9.—Gunning at Barnegat has been very poor, but there are thousands of ducks and geese; and as soon as we have a little rough weather there will be a great many killed. WM. C. INMAN.

**Chickens, Ducks and Geese**

are going to be very plentiful along the line of the Northern Pacific this season. Make your arrangements to go and get some of them. Send Charles S. Fee, General Passenger Agent, St. Paul, Minn., 4 cents in stamps for "Natural Game Preserves of the Northwest."—*Adv.*

# Sea and River Fishing.

## A WEEK WITH THE GRAYLING.

### In Two Parts.—Part One.

I HAVE long desired to make the acquaintance of the Michigan grayling, and when last summer I was given the opportunity of spending a week in camp upon the banks of one of the few streams which still afford tolerable sport to the patient and skillful angler, I was very glad to improve it. Under the tutelage of an old and accomplished grayling fisher, I learned much of the habits of the fish and became fairly proficient in its capture with the artificial fly. That I do not name this stream nor give its exact location is not because I begrudge its treasures to any true lover of the gentle art, but because I would protect it from the army of tourists who annually overrun the trout and grayling streams of lower Michigan. Experience has shown me that these last are usually "fishers for count," men who care only for results, and who are not particular as to the means. For such gentry I have not a particle of sympathy, and I would not knowingly give them information as to good fishing grounds.

To them and to the "mossbacks" is largely due the alarming diminution of the grayling. The average "mossback" considers that the Creator intended the denizens of forest and stream for his particular benefit; that he had a perfect right to capture them when and where and how he pleases, in season and out, by mean fair or foul. As a rule, he has no conception of the meaning of the word sport. His only idea is to take fish or game in quantities sufficient to supply his own wants or sell in the market for enough to pay for his own time. Unfortunately for the poor fish, the grayling streams run through a very wild country, and the "mossback" may use net, lime or dynamite without fear of detection and punishment.

One fine morning in June, just as a score of mill whistles announced to the weary night crews that the hour of their release from their labors had arrived, a party of fishermen left a certain city which is famous for its large production of lumber and salt, bound for one of the larger tributaries of the Manistee River, to fish for grayling. The party consisted of Messrs. Arnold, Wesson, Ryan and myself. The two first named were residents of the city, while Ryan was a college student.

The necessaries for a protracted stay in camp were piled into a strong open wagon, and a canvas cover over all protected the load from rain and dust. There was so much of the duffle that the wagon seats had to be removed, and we perched ourselves as best we could on the top of the load. The motive power of the outfit consisted of a pair of tall, raw-boned, Roman-nosed equines, which had seen much service in the pineries and showed the effects of it. Maud S. had but one eye, a well developed case of grease-heel and a bone spavin. Rarus had divers and numerous affections of the extremities, and a most distressing wheeze, the technical name for which is, I believe, broken-wind. They were hard-mouthed brutes, with hides as tough as that of a rhinoceros, and always hungry; always reaching out for a mouthful of leaves or of any unwary mortal who passed near their heads without keeping his weather eye out for them. As soon as they appeared at Mr. Arnold's house, where all hands had gathered for the departure, we congratulated him on his judgment in selecting that team.

Now Arnold had been foreman in a sawmill for several years and had a pretty fair command of the emphatic part of the English language. I would not have the reader think that he swore, when he saw the horses which the liveryman had sent up, because no Michigan lumberman ever swears. He simply let off a few verbal torpedoes! He was for ordering the team taken back to the stable at once, declaring that he had been promised a good pair of horses, but, as we were all anxious to get started, we prevailed upon him to take what we had and make the best of it. We found one good point about that team, yes, two; their hire was cheap, and there was no danger of their bolting and spilling us and our effects among the stumps by the wayside.

Once fairly clear of the city, we plunged into the dreary old pine chopping, which came right up to its back doors. With a few variations, they were with us to our journey's end. The road was fetlock deep in sand and the horses' shambling gait raised clouds of dust, which filled the eyes and nearly choked us. It grew very hot, too, as the sun sailed higher in the clear sky, and not a breath of air stirred the leaves of the scrub oaks by the roadside.

The perspiration rolled down our faces in big drops, plowing little white furrows through the incrustation of dirt. We others bore our discomforts with that philosophy which is the fisherman's characteristic, albeit Arnold occasionally rapped out a torpedo; but Ryan proved himself a veritable Mark Tapley. He was full of jokes and stories and puns, and even essayed a song until the dust choked him off. He certainly "came out strong" in adversity. Candor compels me to say that his puns were, for the most part, execrable; and Arnold, who, by virtue of seniority of age, had been elected captain of the party by common consent, finally threatened to throw him off the wagon and leave him behind if he should perpetrate another. Ryan promptly averred that he himself was full of grit and had plenty of sand, and dared him to put him off. That was pretty bad, but nothing when compared with some of his efforts in the joke-making line.

The panorama along the way was monotonously alike, the country generally level, and covered with fire-blackened stumps and tall, limbless trunks of trees already fallen or tottering to their fall. The soil was yellow sand —always sand—superimposed with a thin layer of vegetable mould, which nourished a scanty growth of wiry grass and blackberry bushes. The second growth of timber consisted of scrub oaks and scraggy beeches, with an occasional clump of jack pines, feeble and worthless presentments of the magnificent trees which only a few years before had bowed their lofty heads to the onslaught of axe and saw. Nature had done her best to rehabilitate herself, but with poor success. She had little to do it with.

The road wound and twisted about among the stumps and fallen trunks, without any apparent purpose to lead anywhere in particular. I saw the sun now on my right, now on my left; and it was only after watching closely for some time that I became satisfied that our general course was southeast. The highway surveyors—if there were any such officers—neglected that road sadly. It was barely wide enough to admit the passage of our wagon between the stumps, which showed many abrasions made by the wheels of vehicles which had preceded us. Our own wagon wheels were constantly striking the stumps with a force that threatened the craft with destruction and one's spinal column with dislocation. It was then no small task to keep our seats on the load, and we bounced about and jostled together like kernels of corn in a well-agitated corn popper.

Habitations were few and far between. At long intervals we saw log-houses, wherein dwelt some courageous Norwegians or Polanders, trying to wrest a living from the unwilling soil.

Deer were still tolerably plenty in that section and their fresh tracks were constantly seen in the road or near it; but of the game itself we saw none. Ryan said that they probably could hear Rarus wheeze before we got within half a mile of them and fled. Poor old Rarus! I felt sorry for him, believing that his suffering must be as painful as his wheezing was distressing to my ears, but my pity changed to another feeling when on passing him in one of the many excursions which I made ahead of the wagon to relieve my cramped limbs and to escape the awful dust for a few minutes, the old brute caught my arm in his teeth and bit it severely.

We saw cattle everywhere, wandering at their own sweet will through the old choppings, their hides stuck full of burrs and nettles. Each one had hung from its neck a rude bell which gave out a constant clanking as it moved, and enabled the owner to retrace it. The deer become accustomed to their presence and are sometimes seen feeding in close proximity to them.

My companions told me a story about a certain wealthy lumberman who owned many thousand acres of old choppings. He conceived the idea of pasturing in them large flocks of sheep. There was plenty of good feed for them; why should not the scheme be a success? So he bought a number of valuable animals and turned them out. There was excellent meat then for the hunters and mossbacks. The hunter could not tell a sheep from a deer in the bushes; and as for the mossbacks—well, what would you? The poor devils could not resist the temptation which was constantly before them. Why kill a pig for meat when mutton was plenty close at hand, and nobody to look after it? The few sheep that survived at the close of the first summer had left most of their wool on the blackberry bushes. Financially, sheep raising in the slashes was not a success; and the problem of how to utililze the waste lands is still unsolved.

At noon we ate dinner in the shade of some trees growing by a little brook which crossed the road; and after an hour's rest we resumed our weary journey. The country became more broken as we approached the Manistee River, and the watercourses began to cut down through the sandy plateau to gain its level. The sand was everywhere underlaid with a stiff, yellow clay, and the ravines which the streams had cut through it were narrow and deep, with high, steep banks on either side. The load was not heavy; but in ascending the inclines we had to put shoulders to the wheels to help the poor horses. Finally, about the middle of the afternoon, we found ourselves looking down from the summit of a ridge into a broad, deep valley, at the bottom of which a sinuous line of green timber marked the course of a stream of some size. Our destination lay just before us. Arnold put the gad to Rarus and Maud and the sand flew in all directions as the clumsy brutes plowed down the hill at their best gait.

After an exposure for ten long hours to a pitiless sun, with faces scorched, lips blistered and throats parched, how grateful was the change from the heat and glare of the old choppings to the cool, damp shade of the primeval forest, into which we presently rolled. Huge hemlocks, maples and beeches arched their thick tops over the narrow road, beneath which reigned a semi-twilight, shot here and there by a stray sunbeam flitting through the branches. Pounding over a stretch of worn out corduroy, a sudden turn of the track brought us out upon the bank of the creek but high above it, where there was a "rollway." The rollway is a place on the banks of a stream, usually well elevated above it, where logs are brought by teams and rolled down into it. The elevation makes the operation very easy.

In Michigan, and, for that matter, all over the West, any stream which is not a river is a creek; why a creek I cannot understand. The common pronunciation of the word is "crik." There was the same physical formation here that we had seen further back, whenever we approached a watercourse, only that it was on a larger scale. The banks were clay beneath the sand, but higher and steeper. Sometimes these clay banks were close together, confining the creek to a narrow space, then they retreated some distance, leaving between them a wide, level bottom, thickly clothed with cedars. The creek always took advantage of this elbow room to make haste slowly, running from one side to the other, with many a twist and many a curve on the way. As illustrating its propensity to turn back on itself, it is interesting to note that if one of us had descended the bank at the rollway, where we first caught sight of it, and had gone straight to the opposite bluff, he would have waded the creek no less than eight times, and that in a distance of about 150yds.

Leaving the rollway the road turned sharply to the left and descended the bluff through a lateral ravine, the sides of which were clothed with monster hemlocks. Near the bottom of this ravine another sharp turn to the right brought us out upon a log bridge which spanned the creek at an elevation sufficient to protect it in times of floods. Above, on the left, was another high, steep rollway. On the opposite side, filling an indentation in the bluffs, was a small semi-circular piece of level ground on which grew some fine maple trees, forming a pretty grove. The creek hugged the foot of the rollway, leaving a wide curving beach of clean sand at the edge of the grove.

Stealing noiselessly around a sharp bend above the grove came the dark, smoothly-gliding current of the stream, changing to silver as it emerged from the shadow of the trees into the sunlight. Striking the foot of the rollway, it was thrown back upon itself, broadening out into a pool, where it dallied for a moment and then came sweeping downward to the bridge, flowing beneath this with a gentle, swishing sound, to swing around another bend and then to be swallowed up in the cedar swamp below.

If I have made you see the place as I saw it you will agree with me that a prettier spot for a camp could not be asked for than the grove of maples.

After a bath in the creek all hands fell to work to get the wagon unloaded, the tents pitched and everything in good order before dark. We had two 9½×14 wall tents, one for a house tent and one for a kitchen. The house-tent was provided with four folding cots with mattresses and pillows for each. In the kitchen tent was a "Cree" stove—the best camp stove I ever saw—and a folding table, also folding camp-chairs. When I saw the outfit all in order "I was glad I had come," and never was I more comfortable at home than while in that camp. The mosquitoes were a little troublesome at times, but each of us had his little bottle of dope, which, well applied, kept them at a respectable distance.

For the horse tent there was a big hemlock tree, which answered the purpose nicely, as there was not a drop of rain during our stay. They ate their oats from a couple of soap boxes, brought for the purpose, and minded the mosquitoes not a bit. The pestiferous deer flies, however, managed to pierce their tough hides and caused them to swish their stubby tails most viciously. Supper over, we lit our pipes and sat down upon the bank of the creek, where the grassy slope dipped toward the water's edge. The grayling were breaking in the pool at the foot of the rollway, but we were too tired to try them. Naturally the subject of conversation was fish, and Amold gave us quite a little dissertation concerning it. Said he:

"I have a greater love for the grayling than for any other fish. It is less gamy than the brook trout, far less beautiful and not nearly so good on the table unless cooked as soon as caught. There is no fish that deteriorates with keeping like the grayling. If you ask me why I prefer the grayling to the trout I must confess my inability to give a reason that would be satisfactory to you unless you have the same preference yourselves. I suppose it is because the grayling is my 'affinity' among the finny tribes.

"It is now over a quarter of a century since Prof. Cope identified the Michigan fish as a true grayling. Before that time it was known as the 'white trout,' though many considered it only as a species of sucker. It is not very many years since the grayling in this creek and other tributaries of the Manistee River were called 'Manistee fish.' A friend of mine told me that he logged for several winters on the Little Manistee River, and used to see the grayling lying on the bottom in great numbers, but he never thought of catching them because he supposed them to be suckers. He has since become fond of angling, and never ceases to lament the golden opportunities of those early days, lost through his ignorance of what the 'suckers' really were.

"I have studied the habits of the grayling and the conditions which govern its existence with some care, and I am afraid that it is doomed to become extinct. The trout can be propagated artificially, and the streams constantly stocked, but with the grayling artificial propagation has never been successful. Once very plenty in the Hersey, Muskegon, Pentwater, Pere Marquette, the two Manistees —Little and Big—the Jordan and other rivers which flow into Lake Michigan, it is now rare in all of them except the Manistee. The stream where such sport as Thaddeus Norris enjoyed when he visited Au Sable and Manistee cannot be found to-day, at least not to my knowledge.

"I attribute the disappearance of the grayling to three causes—man's reckless prodigality, the destruction of the pine forests, and the planting of brook trout. When it became known that the true grayling existed in Michigan, anglers came here from all over the country. The 'fish hog' came, too. The laws for the protection of fish were then, and are still, openly defied. Nets, lime and dynamite have been constantly used, with the most disastrous results.

"The grayling loves clear, cold water, flowing swiftly over sand or gravel. You will waste your time if you try for it where the water is sluggish and the bottom muddy.

"Logging operations affect the fish in this way: In a small creek there is seldom water enough to float logs, and the logger throws a dam across it, holding it back until he gets head enough to carry them out with a rush. One or two such floods will exterminate the fish in that stream, either driving them out into the main river, where pike, bass and dogfish prey upon them, or destroying them outright in the mad rush of the logs.

"Let the timber be cut off along the streams, and the forest fires finish the destruction begun by the axe and saw, and what is the result? The sun is let into the swamps and dries them up; the volume of water is diminished and its temperature is raised to a point which renders it uninhabitable by the grayling. The Little Manistee River is a case in point. Ten years ago grayling were still abundant in it, even at its mouth; to-day it is necessary to ascend it thirty miles before they are found at all, except in the early spring, when the water is cold everywhere. It is evident that the temperature in the lower part has become too high, as the conditions are otherwise identically the same, except that the timber on the banks has been cut off.

"I know that there are some streams which have contained both trout and grayling; but in all cases the trout was the late comer and has multiplied steadily, while the grayling has as steadily decreased. The Jordan formerly contained both, but I am informed that the grayling are now all gone, except an occasional one of large size. My opinion is that the trout eat the small grayling, but others, who perhaps know more about it than I do, say that they do not.

"From all the information I have gathered from the Indians, lumbermen and early settlers concerning it, I opine that the grayling was indigenous in all the streams in which it was found, the trout having been planted in those waters in recent years. The trout are found to thrive and increase. The greater part of the old pine choppings, worthless for cultivation, will grow wild, and grow wilder year by year. The creeks which run through them will soon flow unvexed by the annual log drives, become clogged with fallen trees and brush, and furnish the trout secure hiding places, in which they will increase in spite of man and their natural enemies. Probably nine out of ten anglers will think that they have gained something by the exchange of the grayling for the trout; but the day which sees the gentle grayling eliminated from this and the other streams I am in the habit of fishing, will be an unhappy day for me. Let's turn in."

FRANK ASA MITCHELL.

## ANGLING NOTES.

### "Are Things What They Seem?"

SEATED in the smoking car of a train between Albany and my home on the evening of Thanksgiving Day, I think I must have been giving thanks, mentally, for the good dinner I had enjoyed in the Capital City, and certainly I was in that contented frame of mind which comes with about the third after-dinner cigar, when I was rather suddenly aroused to the fact that there is one class of subjects that I have always with me.

There have been occasions when I thought that I would like to be a hermit, and in my mind's eye I have a place selected for a hermitage. But I was aroused! The gentleman in the seat in front of me did it, and he did it by turning around and remarking that he was very glad that the open season for lake trout in Lake George had been changed to make the fishing begin on the 15th of April.

"But it has not been changed; it opens on May 1, as it has for years past."

"Yes, it has. I consulted a lawyer, and he says that the season now opens legally on the 15th of April; and I have had my steamer made ready to put in the water on that date; and a New York gentleman has contracted for a new steam yacht to be ready on the 15th; and the game protector says the law opens the fishing on that date; and everybody says the same thing; and you are the only man who disputes it."

I suspected at once that the loose language of Section 105 was responsible for the misinterpretation of the law, and such, I find, is the fact. This hybrid section reads:

> Trout of any kind shall not be fished for, caught, killed or possessed between the first day of September and the first day of April following, except in the waters of Lake George and except in the counties of Lewis, St. Lawrence, Franklin, Fulton, Clinton, Essex, Warren, Hamilton, Herkimer and Saratoga, where they shall not be fished for, caught, killed or possessed between the first day of September and the fifteenth of April.

That is what the law says, but it does not mean what it says, and I am quite sure that I have explained the matter in FOREST AND STREAM within the year, but I find that some of the fish laws have to be explained about once a month. Section 105 really refers to "trout of any kind," *except* lake trout, or, as they are generally called in the statutes, "salmon trout," which have a close season provided under a separate section, 108, as they have always had.

The old law which Section 105 amends read, "brook trout, speckled trout, California trout or brown trout," and when the game law was codified all these shallow water trout were grouped under the present phraseology of Section 105, and the deep-water fish, lake trout and landlocked salmon were put into another section. But how does Lake George, which contains only lake trout, happen to come into what, for convenience, I will call the brook trout section? Years ago a special law was passed for Lake George to prevent fishing for trout through the ice (this was before the ice fishing clause in trout waters was added to the general law), and the season was made to open in that State on May 1.

Through an error of the law makers the special Lake George law was added to the brook trout section, and there it has been ever since, and up to 1892 the language of the original special law was used, thus, "and except in Lake George, where the same shall not be fished for between the first of September and the first of May." Last winter, when the brook trout law was again tinkered, whoever it was that framed the section changed the Lake George season to conform to the balance of the northern waters of the section, probably without knowing that the lake contains no "speckled trout, brook trout, California trout or brown trout," and that there is no longer need of a special law for Lake George, and has not been since the ice-fishing clause in trout waters was added to the general law. As the law now stands Section 105 apparently conflicts with Section 108, and this history of the legislation on the subjects of the sections will explain why it does, and will also show that it was not the intent of the law as it now stands to open the lake trout fishing in Lake George before it opens elsewhere in the State. If further evidence is required that "trout of any kind" does not mean lake trout, one has only to read sections 106, 107 and 109, where this language is used: "Trout of any kind, salmon trout or landlocked salmon," showing that a distinction is made on the lines that I have indicated.

### Hindsight and Spotsight.

Readers of FOREST AND STREAM will doubtless remember that a few years ago, when the saibling of Sunapee Lake, N. H., were discovered, quite a number of the old

inhabitants in that section aroused from their slumbers and declared that they had seen or caught the fish anywhere from forty to sixty years before. This evidence from one and all was dubious to say the best that could be said of it, but what was one to do with such evidence? When an old man said with a voice husky with age and New England rum, that he had taken the saibling from the lake fifty years before they were actually known to exist, it was not polite or parliamentary to say he was a liar. Old men with voices that were not husky with anything, and who had fished the lake all their lives, had never seen or heard of the fish until after 1880, although they had netted the lake and used the spear at all seasons, before they realized that such methods were improper and illegal. It was supposed that all the irregular testimony on this subject had been brought out, but last season another man was found who had caught saibling in Sunapee forty years before and knew all about them. His name is Stevens, and this is the conversation which followed as near as I can reproduce it from notes: "Mr. Stevens, in which part of the lake did you fish for saibling forty years ago?" "I fished in Sunapee Lake, sir. I am talking about Sunapee Lake." "What time of the year did you fish?" "Why the time of year we used to go." "What bait did you use?" "Why, the bait every one used, worms." "Did you ever use live shiners?" "Never!" "Will you tell me the difference between these trout you say you caught in Sunapee Lake forty years ago, and the common brook trout?" "The same difference that there is now."

This was not encouraging, and it was determined to test the memory of Mr. Stevens in another way, although he was not previously consulted about it.

When the saibling came on to the spawning beds this fall in Sunapee Lake, several of them, by direction of the Fish Commissioners, were sent to Mr. A. C. Wallace, the superintendent of the Colebrook hatching station, near where Mr. Stevens resides, and this is what Mr. Wallace writes: "The saibling came in good order, and I went down and told Mr. Stevens that I had some fish for him to examine and tell me what they were. I had them on a platter when he came up, and after looking them over he said they were lakers (*i. e.*, lake trout, *S. namaycush*). I told him lake trout had a forked tail and were not as nicely marked. He looked them over again, and said he did not know what they were, as he had never seen anything like them before, and wished to know where they came from. I told him I would find out all I could about the fish, but wished to make sure if he had not seen fish like them or fish that looked like them, and he said he never had. The next day I told him they were saibling or Sunapee trout from Sunapee Lake, and he said he could not remember them, as he had not seen them in forty years. Now, the truth is he did not know what they were, and he never saw a Sunapee saibling before in his life. Two of the saibling had faded a little, but one was in perfect color and the most beautiful fish I ever saw."

I have not the least doubt that if other witnesses who have testified to catching the Sunapee saibling from thirty to fifty years ago, should have their memories tested in a like manner they would fail as ignobly as Mr. Stevens failed, to recognize the fish, and I am sure that if a fisherman should once see this beautiful fish with characteristics peculiar to it, he will never forget it. The average fishermen select one fish from another by its color. Ten times out of ten the man who has not made some little study of the physical formation of fishes will first mention the color of the fish he describes, and the Sunapee saibling is colored like no other of the salmon family yet discovered in this country. I once put two trout before a fish commissioner of one of our States, and he declared that they were male and female of the same species, and yet one had a forked tail and a mouth extending only to a vertical line drawn through the posterior part of the eye, and the other had a square tail and a mouth about twice as large, and the fin formulæ was entirely different; so it is not to be supposed that every man will at a glance recognize structural differences between two species of trout. But with the Sunapee saibling the color is an important factor and any one who can tell a white horse from a spotted leopard will distinguish it at any season of the year from our common brook trout. They were quickly recognized when they really did appear, by every one who caught them, and when any one says he caught them forty years ago his statement is regarded, to put it mildly, with suspicion.

### Business vs. Fishing.

Mr. Wm. H. McElroy, the brilliant platform speaker, is truly said to possess a mastery of the art of story-telling, but all of his best stories are not told on the platform as I will bear witness.

I spent a little time with him one morning recently, when he happened to speak of that fascinating book to the angler "The Pleasures of Angling," by the late George Dawson, which led to several anecdotes about the author. Mr. McElroy said that on one occasion when he occupied an editorial chair on the Albany *Evening Journal*, ex-Governor Horatio Seymour came into the office and asked for Mr. Dawson and was told that he had gone fishing. Gov. Seymour put his hand to his chin and a thoughtful expression came over his face for a moment, and then he said, "I know a successful business man out in Oneida county who is fond of fishing, and he says that he thanks God daily that he has never in all his moderately long life allowed business to interfere with his fishing." Gov. Seymour was himself a fisherman and one of the first Fish Commissioners of this State, therefore he knew what charms the sport has to draw men to the streams and lakes.

### A Mystery.

The documents in the case are as follows:

*Item.*—A piece of writing paper to which is attached a newspaper clipping, from the type, apparently, cut from the New York *Sun*. On the paper is written: "You and your friend Cheney do not know mascalonge when you see them. Ask Capt. Quinlan, of the Central R. R. He knows about fish and fishermen." This brief note, without date or signature, seems to have been sent to Mr. Wm. D. Cleveland, of Houston, Texas, who also knows something about fish and fishermen.

*Item.*—Indorsed on the back of the quoted note, in the handwriting of Mr. Cleveland, is this: "Dear Cheney, who sent me this? Do you know the writing? It came from Auburn. It's a big story.

*Item.*—The "big story" evidently relates to the newspaper clipping, which contains a story of how one Peter Williams, of Jamestown, N. Y., tried, in his 60th year, to beat a boy of 16 who had caught a mascalonge of 25lbs. in Chautauqua Lake; and how Peter succeeded after being nearly drowned by going overboard and becoming tangled in his fishing-line, in being fished out as he was attached to a mascalonge of 30lbs.

*Item.*—A note addressed to Capt. Quinlan, which reads as follows: "Dear Captain: I must call upon you for a report about mascalonge fishing. Read the inclosed and return to me. I can tell you some marvelous stories of this summer's experience with black bass in Connecticut and ouananiche at Lake St. John. Yours very truly, WILLIAM D. CLEVELAND."

*Item.*—A thought which came to the writer when he read the last quoted note: "He not only can, but he will."

*Item.*—Note from Capt. Quinlan to Wm. D. Cleveland: "Friend Cleveland: I spent a few days at Jamestown last summer, and while there saw a little fishing. One mascalonge was caught that weighed 32lbs. I saw it weighed. Yours, G. A. QUINLAN."

*Item.*—A man who tells the first story has no show whatever in the general round-up.

*Item.*—The last note: "Dear Cleveland: Do you remember that just before we went to Hay Bay for mascalonge, that we read in another New York newspaper of the capture of a big mascalonge of a certain weight at Hay Bay, for which certain claims were made? Do you also remember the night that we spent at Spencer's on Hay Bay; Spencer told us about the same fish, which, it seems, he weighed, and that it lacked a number of pounds, actual weight, of the published weight? Do you further remember that later when writing of our trip in FOREST AND STREAM, I gave the actual and published weight of the fish in juxtaposition, so to speak, with attendant circumstances? Now do you suppose that the man whose mascalonge got so tangled up in figures of weight can have a friend in Auburn, who is getting even with us by saying we do not know a mascalonge when we see one?—A. N. C."

### Commissioners' Notes.

Wentworth writes me that when the New Hampshire Commissioners met a short time ago for the purpose of making out their annual report, they decided to recommend that the close season for brook trout should be extended to May 1 instead of ending April 15 as at present.

An attempt was made in Vermont at the last session of the Legislature to have the brook trout season open in that State not earlier than May 1, although I have not heard with what success, and that is early enough for both of these States and northern New York as well. Col. Wentworth adds that they have 640,000 eggs of landlocked salmon, brook trout and saibling in the hatchery at Sunapee.

A. N. CHENEY.

## Fisiculture and Fish Protection.

### Let Connecticut Wake Up.

*Editor Forest and Stream:*

Realizing the value of your paper as a medium for an exchange of opinions regarding the improvement of our game covers and fisheries, I beg leave to offer some suggestions for those interests in Connecticut.

We are away behind other States in this section of the country and it seems time for some concerted action for the purpose of bringing our little State to a standard with the others. Nearly all our effective legislation for the protection of game and fish is due to the individual effort of Warden A. C. Collins, and when we view the result of one man's work, concerted efforts by a number can bring great results.

Our Fish Commission is lamentably incompetent and as a result our inland fisheries are becoming a matter of history. What a State spends on her inland fisheries is hers for her people to enjoy and if judiciously expended bears permanent fruits. At the last session of our Legislature an appropriation was made of $6,000 for the purchase of trout and $6,000 for the purchase of shad, with $5,000 for retaining ponds and $3,000 for expenses of commissioners; a total of $20,000 on fisheries. And what have we to show for it? Six thousand dollars would have built a fair sized trout and salmon hatchery for our inland fisheries and carried it on one year after completion; the same as to shad, and the $5,000 would have built a retaining pond for each hatchery, and thus have placed us in a position for future work at a cost of not over $1,500 a year to operate each hatchery and supply enough small fish for our entire State.

Our Fish Commission should be commissioners of game, and should be given an appropriation for stocking our State with quail, and also investigating the policy of setting aside tracts of land where game is unmolested the year through, and the overflow from such tracts spread out over adjacent country while leaving a permanent source of supply. Massachusetts, I believe, has tried this with the best of results. But the almighty dollar obscures these efforts. One of our Commissioners runs a trout hatchery, so he wants the State to buy its trout of him. An ex-Commissioner carries on a shad hatchery and wants the State to buy its shad of him, and the other two Commissioners' only aim is to take care of the fish markets and guard the pounds. Really it is an interesting situation.

But it is the sportsmen's fault; it is too much trouble for them to wage a contest for better things. Still, I feel there will come an awakening, and for that purpose I set forth these facts. I shall go over to our capitol this winter and offer propositions of reform, but if as in the past the sportsmen remain away these will go into the waste basket. I believe we can get a new Fish Commission composed of patriotic citizens, who will work for the interests of the State. Mr. Collins should be appointed on that board. Then get a bill passed making the Fishery Commission commissioners of game. It is all possible but needs concerted action.

One railroad official stands ready to offer great favors in the way of transportation of fish and messengers if the State will erect a hatchery along its line, which is in Litchfield county and in the vicinity of a number of large and beautiful lakes and streams.

Thus it is we only need the effort to bring Connecticut abreast of other States in these things. Is there any sportsman ready to make a determined effort for permanent benefits?

CHAS. W. HALL.

HARTFORD, Nov. 26.

### SPECIMEN COPIES.

**Any reader of the "Forest and Stream" may on request and without expense have a specimen number of the paper sent to a shooting or fishing friend.**

## The Kennel.

### FIXTURES.

DOG SHOWS.

1895.

Feb. 19 to 22.—Westminster Kennel Clu nineteenth annual show, at New York. James Mortimer, Supt.

Feb. 26 to March 1.—Mascoutah Kennel Club, at Chicago. J. L. Lincoln, Sec'y.

March 5 to 8.—Western Kennel Club Co., at Denver, Col. E. T. Welant, Sec'y.

March 5 to 8.—City of the Straits Kennel Club, at Detroit. J. W. Garrison, Sec'y.

FIELD TRIALS.

Jan. 14.—Pacific Coast Field Trials Club, at Salinas, Cal.

Jan. 21.—United States Field Trials Club's Trials B, at West Point, Miss. P. T. Madison, Indianapolis, Sec'y.

Feb. 5.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.

Sept. 10.—Manitoba Field Trials, at Morris, Man. John Woolton, Manitou, Sec'y.

### Shall it be Speed or Nose?

*Editor Forest and Stream:*

About a year ago I started a discussion on the speed of beagles in field trials in another journal, and while I was not snowed under by any means, the beagle men of the West were not enthusiastic by any means for my style of beagle. I now want to carry my lance into the camp of the Eastern men, and should like you to spare me space to do it. My contention is that too much weight is put on speed and too little on the fine powers of scent—nose. This latter power is about the only great difference between a hound and a cur dog. The object of beagle breeders that are aiming for field trial winners seems to be to get speed at all hazards. Get nose if they can, but at any rate they must get speed. It is rather amusing to go to a bench show and see the fine little fellows that walk off with the blue ribbons, and then go to a field trial and see the gaunt, long-legged, terrier-looking dogs, that come to compete for field honors, and, what is more, the hound voice is missing in at least half of them—they yap like rat dogs. But that cuts no figure; the point is to win and it takes speed to do it. It is, however, a fact that fine bench show dogs come to the trials and sometimes win in spite of the handicap of hound form. If the beagle is to be developed for use in the field and beauty of form, our field trials will not bring about the desired result.

Great speed in a beagle is not at all necessary to make him a pleasant dog to take on a rabbit chase; in fact it is a drawback if you are out to kill a big bag of game. What gives me pleasure in my beagles is to have them sure on the trail with speed enough not to be "pottering" or laggards, with fine hound form and musical voices. To be sure I don't own many such because the country does not afford many. Now I should like to ask the judges of the National trials at Hempstead at what point in the scale of field trial virtues in a beagle they drop speed and credit nose, and at what point they drop nose and credit speed?

I would take, for example, my own dog, Royal Rover, at the Hempstead trials. (Now Messieurs the Judges, don't think I am kicking, for I am not. I simply want to know how you decide on the winner, as I think it will help prove my point that we are on the wrong track.) Rover was sent East more as an object lesson than with any hope of winning money or renown. If I convince a few beagle men that I am right, the money was well spent. In the first series Rover defeated Nell R., and from all reports did it easily, and she won the Derby. He must have possessed considerable speed to do that. The only other dog he had a chance to run against was Buckshot, the winner of the All-Age Stake, and after a hot heat it was decided that Rover had the best nose, but that Buckshot was too fast for him. With speed enough to beat the Derby winner and a better nose than the All-Age winner, Rover was dropped out of the class and five dogs placed over him. Now it looks to me as though my point was proven, that speed is about all that is wanted. When a dog with good speed and good nose is thrown out for a dog with more speed and less nose, I say the system of judging is wrong—in my opinion.

However, the judges may put a new light on the matter if they care to answer my question. I had about made up my mind not to bring up this question again, but I see that Mr. Fellows and Mr. Muss-Arnolt are after the foxhound standard, and so I took courage from them.

G. A. BUCKSTAFF.

### Pine Tar.

*Editor Forest and Stream:*

In the interest of suffering dogdom I write you to extol the virtues of pine tar. There are no tar trees nearer Colorado than the Carolinas, so far as I am informed, and so, despite the adhesive nature of the subject, no charge of self-interest in booming the tar trade will stick.

Some time ago I had a dog grievously afflicted with cankered ears. In addition to increased exercise, reduced diet and purgatives, I tried nearly every kind of local application recommended to me. Among them were carbolic acid, boracic acid, corrosive sublimate, sulphur, coal oil, caustic, sulphate of zinc, phenol and peroxide of hydrogen. There were others. These experiments lasted a year or more without much effect—the case was a most obstinate one. At last I was persuaded to try tar water, i. e., the liquid made by soaking pine tar in water. Two weeks' application of this cured her. The ears were poured full of the tar water, slightly warmed, twice a day and with the flap it was gently rubbed in. Since then, when symptoms of a re-appearance of the disease are manifest, a few applications cure it.

Two dogs have been cured of sore eyes by its use, to my knowledge. I once cured a wart or tumor on a dog's tail by lancing it and binding pine tar upon it. The wart was as large as a walnut, soft, spongy and suppurating. When lanced it seemed to have grown from the walls of an artery, as the blood flowed profusely and in spurts. Hardly a trace was left in curing it. The tar and bandage were renewed once a week for three weeks. Also I have found pine tar extremely effective in bites, wounds and lacerations of any kind. It should be spread thickly with an unsparing hand in and around the wound and bandaged. Nature will do the rest in a surprisingly short time. Its use in this way cured one of my dogs' shoulder from which several inches of skin had been entirely torn off in what may well be termed a bitter dispute with another dog. The weather was hot and, in spite of daily antiseptic dressing, the wound obstinately refused to heal for over a month. In two weeks from the application of the tar it was well, the hair grew out again and scarcely a scar remained. Its pungent odor is not unpleasant, it is not poisonous, as many antiseptic washes are, and it keeps the flies away. It is cheap, easy to apply, helps the bandage to stick and will be found more effective than many of the so-called antiseptics and germicides. A thirty cent can of it will suffice to doctor a regiment of dogs.

E. K. WHITEHEAD.

DENVER, Colo., Nov. 10.

The City of the Straits Kennel Club have claimed the dates, March 5 to 8, 1895, for their third annual dog show. Their premium list will be issued shortly, and we are told that the money prizes will be larger than they have ever offered before. Mr. J. W. Garrison, 18 Peninsular Bank Building, is the secretary.

## POINTS AND FLUSHES.

[*By a Staff Correspondent.*]

I NOTICED in our bright contemporary, *Sports Afield*, a most interesting article on the scenting powers of the dog, written by the sound and practical writer Mr. J. B. Stoddard. It is specially apropos at this time when breeders heed but little other than pedigree and black, white and tan color as the standards to breed to. Who ever heard a breeder ask if the sire was physically strong, sound and intelligent? But to return. Mr. Stoddard, in his article entitled "Brains vs. Nose," writes as follows:

During a conversation at the Manitoba field trials, Capt. McMurdo remarked to me that it was his opinion that there was not so much difference in the noses of dogs as in the brains behind them—the latter organ being the directing power.

This has long been my own opinion. One of the first dogs trained by me, some years ago, was one of the best I ever saw, and yet I had ample evidence that his nose was not of the best. The dog's intelligence, however, was such that he made what was really a poor organ do better service than a dog with less intelligence could possibly have done.

One often hears the remark made of a dog that he has too much nose. Nothing is further from the truth. He has too little brain or the convolutions are not deep enough—the dog simply lacks intelligence to use his smelling power, and a nose less keen would handicap him the more. It is the dog's nose which tells him that he is crossing the trail of game, but it is his intelligence which informs him whether he is in close proximity to the game or not, whether he is following a back trail, and how to make his casts in order to locate the quarry.

You will frequently hear the remark, "He is a great finding dog"—the other dog may run faster and range wider, but number one finds nearly all the game. Simply another illustration of brains. The finding dog has the better quality of brain matter; he is enabled to concentrate his mind on his work for a greater length of time, and the results are a larger number of birds pointed.

How very important it is, then, in selecting breeding stock, to know just what we are doing? Breed for brains; an animal with it can be educated, but without it very little can be expected. The country is overrun with dogs bred from a brother or sister of some noted dog. The fact is advertised and made much of that "Dude is a full brother to champion Worker," and people who are novices in breeding or who do not stop to think, are induced to breed to, or buy stock from, a dog that may be intrinsically worthless.

There is another side to this question that is very often overlooked in the rush to get something related to some celebrated dog, viz., the dam's side. The mother I consider the most important factor in breeding; she undoubtedly has more to do with the character and quality of the offspring than the sire; she brings them into the world and cares for them for several weeks, and the puppies learn a great deal from her; so it follows that, if the bitch is a level-headed, quiet, sensible dog, the puppies will partake of the same characteristics.

In breeding for intelligence—which means power to direct the nose in finding game—we should not, as a matter of course, overlook the other important factors in a dog's make-up—form, constitution, size, etc. It is said that dogs come in all shapes, but it has been my observation that most good ones are of good physical formation, and nearly all are of medium size. The constitution is of great importance, as, without the ability to withstand fatigue, the dog is of very little value.

It is to be regretted that Mr. Stoddard does nor write more for the instruction of sportsmen than he does. It is not generally known that he was a student in medicine and has a vast fund of general knowledge to draw on. A close and intelligent observer, he draws true conclusions. If such practical men as he would but write on the live subjects of sporting matters, it would do much toward dispelling many false theories connected with them.

### Those Slaughtered Eskimo Dogs.

From a personal letter from Mr. Thomas Johnson of Winnipeg I take the following spirited excerpt. It is good, both for its earnest denunciation of the killing of the team of Eskimo dogs for the trivial purpose of exhibiting it and for the spirit of poesy which he infuses into his writings. He says:

"I was pleased to read your pertinent remarks *re* the destroying of the Eskimo dogs by the Manitoba Government for exhibition purposes at the World's Fair. It was a dastardly, brutal and inhuman act.

"When you consider what useful dogs they are—in fact they are thought more of than horses in the far North—the act will be regretted by those who have a spark of sympathy in their composition. Read Capt. Butler's "Winter Journey in the Wild North Lands with Dogs." Read of his dog Cerg-Vola which he renamed "Untiring." He not only pulls him all day but when night comes you find him—

> "There, stretched upon the snowdrift,
> Before the pine log's glare,
> Thy master's couch and supper
> With welcome thou wilt share.
> To rest. Unless some prowling wolf
> Should keep thee watchful still,
> While lonely through the midnight sounds
> His wail upon the hill.'

"When such a dog acts as a beast of burden in the day and at night protects his master from the attacks of wild animals and shows in many ways what a wonderful creature he is, does it not seem cruel to think his end—poison—for exhibition purposes.

"But Capt. Butler, who traveled in that land of stillness so little known even to-day, a land with rivers 2,000 miles in length, with lakes said to be as large, if not larger, than any on this continent except Lake Superior; with forests yet untouched, as large as Europe; with thousands of miles of the richest land on this earth and 400,000 square miles of sterile, treeless wilds wherein the musk-ox is plentiful and caribou are in countless thousands, a land that in a portion of the year knows no night; and yet to-day, with the exception of one break of less than 200 miles, you can buy a ticket and travel by steam from any part of the world—and who can wonder that after a dog had shared with him the vicissitudes of such a trip, that he exclaimed:

> 'Old dog, they say thou hast no life
> Beyond this earth of ours,
> That toil and truth give thee no place
> Amidst Elysian bowers.
>
> 'Ah well, e'en so, *I* look for thee
> When all our danger's past,
> That on some hearth-rug far at home
> Thou'lt rest thy limbs at last'."

### Gleason's Mange] Dip.

When in Dakota I saw a barrel filled with Gleason's mange dip. It was so highly commended that I obtained the recipe. The dog is soused bodily into the dip. Mr. W. W. Titus gave it to me as follows:

"Take one can Lewis's lye. Put it into a gallon stone jar. Add two cupfuls of soft water, using the empty lye cup for a measure.

"Have ready 4lbs. of flour of sulphur. Add to the lye solution enough to make it the consistency of thick mortar.

"Have a barrel one-half to two-thirds full of soft water. Pour into it the sulphur-lye mixture.

"If the mange is severe and needs heroic treatment, add 12oz. of sulphurous acid to the bath.

"Renew every ten days throughout. Dash old mixture about infected places."

---

There was a good attendance of trainers at the E. F. T. Club's trials. Many of them will be in the competition again in January and February.

Mr. Horace Smith, Monroe, N. C., returned to his home and expects to be in evidence at the trials in Mississippi. That will be his *debut* in the West.

Mr. Luke White returns to Thomasville, N. C., where he will train during the winter.

Messrs. Rose, Avent and Tucker returned to their homes in Tennessee.

Mr. J. B. Stoddard will remain at Newton, N. C., for a while, then may take a flight southward, where game is abundant and the weather is good. He has room in his kennel for a dog or two to train this winter.

Mr. John White returned to Thomasville.

### Newton Notes.

Several sportsmen remained after the trials to enjoy the quail shooting in the vicinity of Newton. The shooting thereabouts is really all that any one could desire. However, the land owners are not always so obliging as one could wish. Still, if the sportsman was one of the land owners, he might view the question from the same standpoint as the land owner. There is really no just cause of complaint when the land owner wants to kill the birds himself or doesn't want them killed at all. Nevertheless there was abundant ground left over which sportsmen could kill and miss to their heart's content.

Prof. Osthaus remained at Newton to shoot during a few days. He was also at work on some portraits of Mr. Lorillard's dogs, and the portraits are marvels of artistic skill. He had finished a portrait, too, of Sandy Gladstone, for Mr. S. Murray Mitchell. I was fortunate in seeing the photograph of one of Prof. Osthaus's paintings, a kennel scene, representing the dogs grouped about the gate at which on the outside was the kennel man. Each dog had a most realistic individuality and character. One or two younger dogs were all eagerness and had their forefeet against the kennel gate, while the older dogs stood looking on sedately, knowing that the visit of the kennel man had no special importance. It is a Southern scene as shown by the trees laden with Spanish moss. Mr. Fred. A. Hodgman, of New York, also remained to shoot after the trials. Messrs. Wm. H. Schieffelin and Wm. Jay Schieffelin, of New York, arrived on Friday, after the trials, to enjoy the shooting.

### The Selling Stake.

Objections have been made to the test of the dogs in the Selling Stake as follows:

That, as it purported to be for shooting dogs, the test was not made on a shooting basis.

That the dogs were not shot over as in actual shooting.

That birds were not killed over them and consequently the dogs were not tested in retrieving.

That the dogs were not worked alone, as in actual shooting.

That the whole test was competitive, and not a test for practical service.

I present the objections for such consideration as they may merit.

Following is the form of the certificate:

EASTERN FIELD TRIALS 189 .

This is to certify, that the .....
.....sire,.....dam,.....
.....years old, Registered No....., while running in the

EASTERN SELLING STAKE

showed the necessary qualities of a good shooting dog.

Owner,..... Handler,.....
..... } Judges. .....Pres.
..... } .....Sec'y.

If the Selling Stake is adopted as a permanent field trial feature, it seems to me that, to carry out more fully the intent of the stake, the club should amplify its scope so that the dogs when running would be subject to every-day shooting conditions. It is, moreover, reasonable to assume that greater interest would be excited in it if sportsmen who contemplated purchasing were, in a general way, invited to be present and to shoot over such dogs as pleased their fancy.

A Selling Stake is not of much interest if no buyers are present, and buyers will not be present if there are no inducements for them above the commonplace. B. WATERS.

---

### Brighton Tobe and International Field Trials.

*Editor Forest and Stream:*

In your report of the International field trials held at Mitchell's Bay, Ont., your reporter seems to have seen things differently from the judges. It might not be out of place to state things briefly as they saw them, in some of the heats he particularly refers to, in which Brighton Tobe was concerned, as it is not at all unnatural for a person who has a brother running dogs to feel rather favorably toward them.

Tobe was first put down with Toledo Bee. After beating out a slashing they were cast over a fence into a cornfield, Tobe having decidedly the best of it in range, speed and quartering, and roaded and pointed a covey well inside the fence. On being flushed the birds scattered over the fence into another slashing and were immediately followed. This was the most difficult piece of ground any dogs were worked on during the trials on account of so many brush piles and fallen timber. Here Tobe pointed birds successively, and in one instance while pointing in a brush pile Toledo Bee swung around the end of a log beside where he was pointing, and the birds flushed. Next heat Tobe went down with Cleopatra. After ranging out a cornfield they were cast into a piece of woods. Cleo immediately pointed a ruffed grouse, Tobe backing steadily. On going through the woods to a large stubble field Tobe was held till Cleo, who was still in the woods, could be brought up. On being cast off Tobe at once showed his great superiority in speed, dash, ranging, quartering and independence of getting out and staying out. On the edge of a field both dogs were puzzling on a hot scent when birds flushed, caused, I imagined, by the people who were very close to the dogs. The birds flew back into the woods from where we had just come, and were followed on the opposite side of the woods. Cleo flushed a bevy, and shortly afterward another bird flushed suspiciously near her. Tobe next pointed by a brush pile by which lay a large log. On coming up to the pile Cleo flushed a bird, then went on and flushed two more within a few yards of the first, Tobe remaining still until ordered on. They were soon afterward ordered up. Where Tobe flushed a bird in the heat I am at a loss to know, as neither of the other judges nor myself saw it. I saw a bird get up in some weeds outside in the field, but no dog was near it to flush it. Tobe was in the weeds and I imagined it got up by the noise he made going through, as it was driven in there some time previous and had become restless. My opportunity for seeing this was quite equal to any one.

Luke and Dock were then put down in the same field Tobe and Cleo had been brought from. Both went off well, Luke the faster and going wider; nothing more was found in the fields, and returning to the woods Luke pointed a covey very well, Dock backing steadily. On the birds being flushed their direction was taken, but after a diligent search none were pointed, though this was neither an extensive nor a thick piece of woods, and two, at least, if not three bevies had been driven into it. On leaving the woods two more fields were tried, both dogs going well, Luke the best, but nothing was found and they were taken up. In the heat between Luke and Dash Antonia, the birds found were in what had one time been a sluice, the bottom of which was now dry and sparsely covered with very short grass, the sides only having a fringing of weeds not exceeding a few yards in width in many places; in this place Luke held a point well while Dash went in after first pointing the covey. Several of th birds on being flushed went a short distance only, droppin into the fringe of weeds; here Luke made two more points on single birds. We thought the side of the sluice on which those points were made, owing to the narrow, slight fringe just affording a shelter for the birds, the easiest to find point birds in of any place where the dogs were run during the trials, and that was proved by later visits to the same spot with other dogs. Whereas the place where Tobe made his single points, equally as many, was the hardest place the dogs were put in during the trials. How singular that points made by Dock in the same slashing should be so mentioned over those made by Tobe in the same place on birds that had been followed directly after being flushed outside?

On being put down for the final run off Tobe showed so much superiority over Luke in dash, speed, ranging and independence as to be a very poor companion for the latter, which had simply met what we thought a superior dog to himself in almost every quality, and we fail to see wherein Luke's opportunity for finding birds was not in every way quite equal to that of Tobe. So far as Nellie and Dock were concerned, I did not think a prettier brace ran at the trials than Nellie and Beppo's Maid. Maid's work in the same slashing as Dock's was not excelled for style and ranging by anything done at the trials; their behavior and manner of quartering out a field with good speed left little to be desired, and it was only by superior dash and range—their other qualities being so nearly equal—that Nellie finally got the verdict. It was a most unfavorable day for pointers and Maid became a little chilled from the wet, rank weeds toward the end of the heat, and did not go out as well as her competitor, who showed more dash and range.

JOHN DAVIDSON.

MONROE, Mich., Nov. 18.

---

*Editor Forest and Stream:*

I cannot refrain from taking exception to your report of the International field trials. Though I am opposed to newspaper controversies in general I think it would be doing an injustice to your readers, the dogs and their owners if your report was passed by without comment. There seems to be a somewhat unwholesome desire pervading your report to enshrine one or two dogs in a halo of glory and criticise others too severely and unjustly. In the first place, your report of the heat between my own bitch Monk's Fanny and Cleopatra states that the latter having started off with "her usual joyful vivacity" (omitting to state, however, anything about her running in to her handler, though she surely did it frequently enough to have attracted your reporter's attention), and "nailed a brace under a log" that Fanny when brought up to back refused, which is utterly untrue, as Fanny backed promptly the instant she saw Cleopatra on point and she was credited with a back by the judges. Your reporter must therefore be either willfully stating what he knows to be untrue or he has adopted the suggestion of some interested person (who has evidently little regard for the truth) as to what transpired, he not having seen the same himself.

In describing the heat between Cleopatra and Brighton Tobe in the second series, your reporter also evinces a very strong desire to condone the offenses and is much more lenient in commenting on the work than he would be, I venture to say, had some other dogs in the same stake made as many mistakes. I watched this heat myself with a good deal of interest, and I must say I think Cleopatra did not distinguish herself very hugely, but on the contrary, made more repeated flushes and her performance on birds was more discreditable than that of any dog in the stake; and yet your reporter deals very gently with her and is very lukewarm in his praise of Tobe's work, which was really a high-class performance, far excelling that of any dog in the stake. Your report says that Cleopatra nailed a grouse in good style, but strange to say never mentions that Cleopatra jumped at the bird and pulled a mouthful of feathers out of him, and yet another reporter evidently saw the little episode and thought it worthy of comment. Tobe did not flush a single, as your report says, while Cleopatra ran right on top of a single (shortly after she roaded and ran in on a bevy) that your reporter evidently did not attach much importance to, though she ran right on top of the bird in an open wheatfield and the bird got up within a foot of her nose.

Your reporter then undertakes to tell the judges that they erred in placing Tobe over Luke, and that they should have been reversed. Now, Mr. Editor, while Luke impressed me as quite a good dog and deserving the place he got, he is not in the same class with the winner at all; he cannot compare with Tobe in speed, he cannot go fast enough to make Tobe extend himself, nor was there any dog in the stake that can force Tobe out. As to Tobe's quartering, I think it was all that could be desired; he ranged fast and very wide, and, moreover, was obedient to every signal from his handler, answering promptly and cheerfully every call that was made on him, which is more than can be said of some other dogs in the stake. I failed to see the doubtful work your reporter imputes to Tobe or notice that his range was erratic. The bevy that Cleopatra flushed and he says Tobe should have pointed, Tobe was never close enough to have pointed, he having been cast to the left by his handler; so surely this was not one of his missed opportunities. Your report credits Tobe with a flush he did not make, but your synopsis of the heat does not mention when it occurred.

There are other inaccuracies in your report, but I dislike to prolong this discussion or further encroach upon your valuable space. I could not help thinking, however, your reporter is prejudiced, evidently having a much keener appreciation of the virtues of Cleopatra and Luke than the judges or any one else, and that it would be doing an injustice to other competitors and to your readers, who would surely draw erroneous conclusions, taking your reporter as a criterion, as to the merits of the dogs, and would be at a loss to reconcile your report with that of others if your report should pass without comment. It is, I think, a coincidence worthy of note that both Cleopatra and Luke, who appear to be such prime favorites with your reporter, both belong to one man—Mr. Wells.

It only remains for me to say that the remarks I have made regarding Tobe's running were prompted purely by a desire to see him get full credit for his laurels and wipe out, if possible, the injustice your report has done to one of the best, if not the very best, dogs that has ever honored our country. I thank you for your valuable space.

H. MARSHALL GREYDON.

LONDON, Ont., Nov. 23.

### United States Field Trials Club Meeting.

*Editor Forest and Stream:*

The annual meeting of the U. S. F. Club for the purpose of electing a board of governors and the transaction of such other business as may legally come before it, will be held at West Point, Miss., Wednesday evening, Jan. 23, 1895. Members who will not be able to attend will please send their proxy to me, naming the member whom they desire to represent them. P. T. MADISON, Sec.-Treas.

INDIANAPOLIS, Ind., Dec. 8.

---

### Champion Old Burgundy.

> DEAR Old Burgundy, king of Skye dog race!
> 'Tis hard to lose thee, hard to fill thy place,
> My faithful friend! yea, prized at every show,
> I weep for thee, and strive to bear the blow,
> No more shall I entwine thy silken hair
> Or comb thy glossy coat with tender care,
> No more in England wilt thou gain repute,
> My champion! almost human—though a brute!

CHARLOTTESVILLE, Va. MRS. E. M. WILLIAMS.

# DOG CHAT.

There are many terrier owners and breeders whom we could name who will read "Terrier's" letter, in another column, with interest. There are hundreds of terriers in some kennels that are simply eating their heads off and from which their owners derive little pleasure except it be to see them have an occasional "turn-up" with a "bagged" woodchuck or tack up a card or two won at shows. For lack of opportunity to indulge in their natural propensities their dogs come under the category of pets, and cribbed and confined as they necessarily are, are losing the courage and vim that we associate with such terriers—the fox, Irish, Scottish, Dandie Dimont and Bedlington terriers, for instance. The reason for this condition lies in a great measure with the owners themselves. A setter or a pointer owner—if a sportsman—does not expect to find quail or grouse in towns and villages but seeks such country as will give him the sport he craves. This the terrier men should do.

Mr. C. T. Brownell has sold the well known Gordon setter Trim B. (Dixie—Beaulah) to Mr. A. Ziegler, Jr., Buffalo, N. Y.

The Westminster Kennel Club is desirous of having their premium lists ready for distribution by Jan. 1, and in order to publish therein a complete list of special prizes the club would be glad to hear from the secretaries of the different clubs and others who may wish to offer prizes, as early as possible. The address of the superintendent, Mr. James Mortimer, will be 59 Liberty street, Room 2, New York, and not at 44 Broadway as heretofore.

Mr. A. C. Bradbury intends visiting the Liverpool show, leaving here early in January. He is taking over a fine lot of brown Leghorns for exhibition in England, and will return in February in time for the New York show, bringing with him the Herschel greyhounds. He will be pleased to execute any commission for American fanciers.

When the month of December comes round and two or three dogmen congregate together the question is asked: "Have you heard anything of the judges?" and it is unnecessary to ask what is meant. Not that the question of judges has much influence at a W. K. C. show as far as entries go, still for some reason there is a halo that surrounds the position that seems to clothe the wearer with a higher opinion of himself. Nothing is known as yet who will be appointed, but as the premium lists are expected to be out by New Year's, we should not have long to wait. The selection of such a list is a difficult problem, owing to the importance of the shows and the awards to be made. While on this subject we might remark that it has been suggested that the W. K. C. have the judging extend through the four days of the show. For many reasons this idea is a good one. The horse show is judged in that way, and thereby the public interest is kept up during the whole week. At the New York show the judging generally extends well into the second day, and there is more or less of a rush to get through the work even in that time. If the judging extended through the four days it would not be necessary to have more than two large judging rings. This would leave more space for benching, an important consideration when the entries have increased to such an extent that it is now a difficult matter to bench all on one floor. For instance at the last show, the pet dogs and some of the terriers, around whose benches there should be ample space, had to be placed above the main floor among the chairs, a situation far too cramped for such interesting and important divisions. On the first day certain breeds, say pointers, setters and St. Bernards, could be judged; on the second, mastiffs, greyhounds, deerhounds, great Danes and spaniels; next day all terriers and so on. If the schedule of judging was announced in the premium lists, visiting dogmen would then be able to make their arrangements accordingly, and they would thus be sure of meeting those of their friends interested in their particular fancy. The daily newspapers, on whom so much depends to create an interest among the public, would then have material to work up a good story each day and not be crowded with lengthy prize lists the first two days, in which the general public take little interest, and have little to write about the remaining days of the show. There is really no reason why the judging should be rushed through in one day, except that it would be impossible to get out a marked catalogue before the last day, but this is not of sufficient importance to offset the other advantages. The announcement in the dailies of the breeds to be judged would draw the public, as with slower judging and fewer rings they would be better able to follow the awards. As at present carried out there is a good deal of confusion and most of the work is meaningless to the general public. The award boards could be properly kept, and if each handler of a dog when entering the judging ring was supplied with a card on which was conspicuously printed a number corresponding to the number of his dog, the judging could be followed with interest and benefit. The suggestion has been made and we should like to hear how other exhibitors feel about it.

The Meadowmere Kennels, not content with scooping in most of the prizes lately with their black poodles, and starting several other kennels with winning teams, are still seeking to improve their new kennel team. They have just received two dogs from France which their Paris agent informs them are the best dogs of this type seen there this year. These, with the eight imported for Mr. Trevor by Messrs. Mortimer and Vail three months since, will enable this kennel to put down a better team of black poodles at New York show than has yet been seen. Mr. Trevor says that owing to the present unsatisfactory state of the transportation arrangements, he is doubtful whether he will risk showing any prize winners at any but the New York, Chicago, Boston and Philadelphia shows, where his man accompanies them. On the last trip from Toronto his dogs came back in an almost exhausted condition, and, as he justly remarks, the amount of glory to be obtained from a win is not worth the risk of losing one of his dogs.

Mr. Shirley Stewart reports the loss of his great Dane dog Don Cæsar, Jr. (23,638). Cæsar was lost from his home in Toronto four weeks ago last Saturday. He has never been known to stray or even stay away from home over night, and it is supposed he has been stolen. Don Cæsar was a well-known prize winner at Canadian shows, having won two firsts at Toronto Fair shows and other prizes. He is a blue dog, with brindle markings on face and legs, and his ears are well cut. Mr. Stewart is living in St. Catharine's, Ont., at present, and still has two good great Danes in his kennels, Chamois and Brurda; the latter has won several prizes. It is feared that Don Cæsar has been sent over the line. If any of our readers should come across him and then communicate with Mr. Stewart, they will be doing a friendly action.

The Sportsmen's Exposition that will take place in Madison Square Garden, New York, May 13 to 18, 1895, promises to be a very interesting affair. In our issue of Nov. 10 was published, in another department, a description of the different classes which define the character of the undertaking. As kennel owners generally have not seen that part which relates to the kennel display, we draw more particular attention to it here:

Class I.—Kennel Supplies will form an interesting group and include all kinds of dog food mentioned, improved kennels for benching and feeding, transportation crates, dishes and watering troughs, dog medicines and surgical instruments, books on the care and training of various kinds of dogs, literature defining the status of the dog as personal property, and the advancement in dog history."

Mr. Frederic S. Webster, the secretary, who is well known to dogmen as the secretary of the Pointer Club, informs us that the scope of this kennel division has been enlarged and will embrace a display of mounted specimens of every breed of dog recognized by the Kennel Club, and, where possible, it is intended to show the purposes for which they are used in sport. For instance, pointers and setters will be mounted in the act of pointing quail, etc.; Chesapeake Bay dogs retrieving ducks, and so on. Thus the exhibition is intended to be both interesting and educative to the general public. To carry out the idea we suppose the St. Bernard will be represented in the traditional manner, but what to do with the Boston terrier has not yet been decided. The exhibit, however, is expected to be very interesting, and those who have mounted specimens of dogs should communicate with the secretary with a view to loaning the same.

The sudden death is announced of the celebrated animal artist, Mr. C. Burton Barber. His charming pictures of dog life have made his name familiar to all lovers of the dog.

*Stock-Keeper* (Eng.) has a cable message from America addressed to Caracas, care of Rasselas, London, but it is couched in a code that they have no clue to, and wish the sender to explain matters.

The Hempstead Farm has purchased the well-known collie Hadfield Don from Mr. W. W. Thompson. It came over in Spratts care.

Attention is drawn, in our business columns, to the reduction in the fees of the Mere Kennels' stud fox-terriers. Intending breeders should not forget that Jollice is by Despoiler, who has lately made such a name for himself as a sire in England. Dame Fortune, the sensational pup of the year, that beat Vice-Regal, is by Despoiler. The Mere Kennels, through their advertisement in FOREST AND STREAM, sold one of Jollice's get to a fancier at the highest price ever paid for a puppy from their kennels.

The shooting of Mr. Bateman's beagles still exercises the minds of the beagle men, and more letters have been received on the subject. It is not likely that the National Beagle Club will take the matter up further than to officially bring the case to the attention of the S. P. C. A. A committee to act in the matter will be appointed at the next meeting of the club, Jan. 4. A similar case is reported in the English *Stock-Keeper* this week. A game keeper and his master were sued in court for shooting a valuable collie bitch, Clayton Match. The case was left to the jury to decide, and a verdict for $200 in the plaintiff's favor was rendered. The American Kennel Club is supposed to look after the interests of dogdom in this country, and instead of piling up a useless surplus, it might well take in hand such cases as Mr. Bateman's, and make an effort to prove to the average layman that dogs on which taxes are paid are just as much property as the same man's cows or horses, on which no direct taxes are levied.

There is a growing feeling among dog breeders that the American Kennel Club should inaugurate the coming year by devoting some portion of its income to special prizes at the coming shows. The dog men feel that they should be afforded an opportunity to get their money back instead of contemplating a balance in a bank that does no one any good, except the bankers. If the American Kennel Club was a proprietary club it would be different, but it is supported by dog men and for dog men, and it is through dogs it has its being, therefore, it is considered that the club should make some effort to improve dogs as well as the morals of dog men.

Mr. E. M. Oldham has resigned the treasurership of the American Spaniel Club and in doing so leaves the treasury in a healthier condition than when he found it. There is now some $200 to the good.

The American Kennel Club has long felt that the offices at 44 Broadway, were not as well arranged as could be wished and as the Executive Committee at its meeting last week gave full power to the secretary to choose others, it is very probable that in May when their lease expires the club will move to the corner of Liberty and Nassau streets where better offices at similar rental can be secured.

The admission by Mr. Hook, of the Boston Terrier Club's Pedigree Committee, that the Boston terrier men were getting their terriers with too many terrier characteristics and that they had been advised to breed back to the bulldog to get certain properties, shows the inherent weakness of their claims for the breed. FOREST AND STREAM questioned the policy of the A. K. C. in admitting the breed and it will yet be found that those who were not in favor of it are right. Certain members of the club led us to believe that their aim was to breed out the bull characteristics and make the dog a terrier. The type is mixed enough now, in all conscience, and if the breeders have already to resort to first crosses to save certain properties where is their claim of fixed type?

The regular monthly meeting of the recently organized Montreal Kennel Association was held Dec. 4, Dr. Mills in the chair. About forty members were present, and these had the pleasure of electing twenty-two new members. The president gave a dissertation on dogs generally, classifying them by type, etc. Dr. W. H. Drummond read an interesting paper on Irish terriers, but we can scarcely agree with him that "as a sheep dog he (the Irish terrier) is invaluable and has as much ability as the Scotch collie." As for his companionability, gameness and varmin killing qualities, these are conceded without question. The next lectures will be on fox-terriers, by James Lindsay, and St. Bernards, by J. A. Pitt.

Interesting experiments, according to *Stock-Keeper*, have been made by the French chemist, Pictet, on the resisting power against cold possessed by animals. A dog was placed in a copper receiver at a temperature of 60 to 90° C. In ten minutes the bodily temperature showed a rise of 0.5°, and after an hour and a half had only lost 1°. A little later nature gave up the struggle, the temperature rose rapidly, and the animal died suddenly.

The noted bull bitch Bicester Beauty and others of Mr. Thomas's bulldogs are offered for sale in English papers.

At the late Fox-Terrier Club show held at Derby, Mr. F. Redmond, who it will be remembered judged fox-terriers for the American Club show at Newport, R. I., had a good innings. With Dame Fortune he made one of the biggest winnings ever scored at one show. Besides winning the smooth championship and beating Vice, Regal, Venio, etc., she won in cash £54 or $270. With all his dogs Mr. Redmond won $750! The owner of Meiford Molly was also a big winner, taking in about $250. At this show there were 380 entries of smooths and 175 wires, the total entry eclipsing all previous records. In wires Mr. C. Bartle won about $200 with his Wellingborough Judy, and $100 more with his whole team. Mr. Pim, who judged wires, seems to have upset his awards in a most aggravating manner. Blooming Beak was fourth in the limit class and Wellingboro Scorcher reserve. In the next class Scorcher takes first and Beak second, and another dog Meersbrook Lordship gets fourth. In the Derby, Lordship meets Beak and the judge puts Lordship second and the Beak third. It will be interesting to read Mr. Pim's report.

The s.s. Greece brought over recently the Llewellyn setter bitch Phoebe Wind'em, purchased by Mr. H. L. Smith, of Strathroy, Ont., from Mr. Llewellin. This bitch won second in the Puppy Stakes at the Shrewsbury trials last spring and first at the trials on grouse at Bala, Wales, in August last. Mr. Smith, we understand, was the first to import a Llewellin setter and this was just twenty years ago.

The Woodlawn Park Kennels have bought the good bulldog Nugget, that won first in the under 45lbs. class and the Sawyer cup at New York last February, from Mr. C. A. Houck, of Albany, N. Y. Last Saturday they sold the good young bulldog Rustic King II., one of the memorable litter, to Mr. E. Ficken, an architect of New York city. We regret to say their bull bitch Grosvenor Lass, recently imported, gave birth prematurely to seven fine pups by King Orry, but the mother and all the old bulldogs are doing well.

We desire to call the attention of pointer breeders to the closing date, Dec. 15, for entries to the grand annual sweepstakes of the Pointer Club for 1895. For pointers born between the dates Sept. 18, 1893, to Sept. 15, 1894. Fee $3.

Mrs. Smythe, whose sad accident has brought her many expressions of sympathy from her friends in the fancy, desires us to thank them in her name for their kind thoughts, as at present, although on a fair way to recovery, she is unable to do so herself. It seems that the accident might have been avoided had the flagman been at his post or had not endeavored to stop the horses. The engine did not whistle or the flagman appear and no warning whatever was given of the train's approach, and the carriage had almost crossed the tracks when the flagman ran out of his box and caught the off horse by the head and backed them on the track. The flagman, as stated before, was killed, and also Zadie, Mrs. Smyth's pet mare, but the off horse was unhurt. Mrs. Smyth, with part of the carriage and the robes, was carried a distance of 50yds. on the cow-catcher, when she rolled off to the track. Her companions, Mr. and Mrs. Meacham, were killed, as stated in our first account. Mrs. Smyth happily remembers nothing of the day's occurrences. Her left arm is broken in two places above the elbow and there are three breaks in the pelvis. She has plenty of courage but needs it all. Mr. and Mrs. Meacham were saved suffering of any kind, the former being instantly killed and the latter dying an hour after the shock.

Mr. C. A. Loud, late of Los Angeles, Cal., passed through New York last week on his way to Bessimer, N. C., where he intends establishing a breeding and training kennel. Mr. Loud is well known in field trial circles and is a veteran in the business of handling and training field dogs. He had with him half a dozen very nice English setters that he had bought from Mr. Shallenberger of Alma, Neb. We wish him every success in his new home.

Roderigo is dead. Field trial men and setter breeders the country over will receive this announcement with regret and sympathy for Messrs. Avent & Thayer. Roderigo died the night after Mr. Avent returned from the field trials. His cause of death is not known, but as this grand old dog was whelped April 12, 1883, it will be seen he was getting on in years and his death might have been expected. Mr. Avent says he was a faithful companion and loved by all his family as one of themselves. Roderigo was buried in Mr. Avent's yard and a monument is to be erected over his grave. Roderigo won the All-Age Stake at the National Field Trials at Grand Junction, Tenn., 1885; but it is as a sire that his name will long be remembered. Among his illustrious progeny such names as Antonio, Rowdy Rod, Orlando, Joey B., Toledo Blade, Bonair, Rod's Sue, Topsy's Rod, Clementina, Cynosure, etc., occur to the student of field trial form as many time winners of the principal field trial events. His get won three Derbies in succession at the E. F. T. C. Trials and in 1889 his get won three of the principal All-Age stakes. Roderigo was by Count Noble out of Twin Maud.

## Pointer Club Meeting.

*Editor Forest and Stream:*

A special meeting of the board of governors of the Pointer Club was held Dec. 8 at the office of the president, 44 Broad street. President Wise called the meeting to order with the usual quorum present. The Hempstead Farm Kennels claim for prize money was ordered paid.

Voted that all applications for entries in the special Produce Stakes for 1896, which shall be made by the owner within fifteen days after the receipt of the official notice of the stakes shall be accepted by the secretary.

The following specials were offered at the coming W. K. C. show: $20 to best pointer, the same to be bred and owned by members of the Pointer Club. But the same person need not be the breeder and owner; $20 to best pointer shown and owned by a member of the Pointer Club with the best field trial record. To be judged by his or her record and not by show points.

It was then resolved that the management of the W. K. C. show of 1895 be requested to permit the Pointer Club of America to appoint a judge to award the special prizes offered by this club.

F. S. WEBSTER, Sec'y.

## Beagles Shot.

*Editor Forest and Stream:*

Who bred, owned, trained and sold Sedgwick?

QUAKER.

## "Forest and Stream" Fan Pedigree Blank.

FOR some time past breeders of dogs have demanded a pedigree form that would afford spaces for a more extended pedigree than those hitherto published. The difficulty has been in arranging a form that, while admitting the required extension, would be compact and not too large for mailing. This difficulty has been solved in the "FOREST AND STREAM Fan Pedigree Blank" which is so arranged that a dog's pedigree can be recorded for eight generations, and the spaces radiating from a center, the reader is enabled to trace at a glance the different strains which lead from sire and dam. Spaces are also provided for recording the name of dog, its breed, color, sex, breeder and address, dates of birth and purchase, from whom purchased, E. K. C. and A. K. C. Stud Book numbers and certification. These blanks are for sale at $2 per hundred, 30 cents per dozen, by the Forest and Stream Pub. Co., 318 Broadway, New York.

## Fastest Time Ever Made from Chicago to Jacksonville, Fla.

"THE Monon Route" (L. N. A. & C. Ry.) placed in effect on Nov. 18 the fastest schedule ever made between Chicago and Jacksonville, Fla., leaving Chicago at 8:32 P. M., arriving at Jacksonville, Fla., at 9:55 A. M. the second morning, making direct connections with the morning departures from that point with all diverging lines and arriving at interior and southern Florida points by daylight, St. Augustine and Palatka before noon; Ocala, Orlando, Sanford, Winter Park, Bartow and Tampa early in the afternoon; Titusville and Rockledge before supper, and Lake Worth before bedtime. The trains are vestibuled, Pintsch lighted and steam heated, with the finest dining and sleeping car service in the world. For further information, time tables, and sleeping car tickets, call on or address Sidney R. Jones, C. P. A., Monon Route, No. 232 Clark street, Chicago.—*Adv.*

### A. K. C. Executive Committee Meeting.

THE regular meeting of this committee was held at 44 Broadway, New York, Dec. 6, Thos. H. Terry in the chair. Present: Delegates from associate members, T. H. Terry, Dr. H. T. Foote and A. Clinton Wilmerding; Northwestern Beagle Club, Frederic S. Webster; Bulldog Club, E. Willard Roby; Pacific Kennel Club, James Mortimer; St. Louis Kennel Club, Major J. M. Taylor; Mascoutah Kennel Club, C. F. R. Drake; New Jersey Kennel League, Edwin H. Morris. National Beagle Club, H. F. Schellhass; American Spaniel Club, E. M. Oldham; English Setter Club, Wilson Fiske.

After the minutes of the previous meeting were read and accepted, and it was announced that no credentials were to be presented, the secretary read a brief report, which embraced matters decided by motion.

The treasurer's report for this year was then presented, showing:

| | |
|---|---|
| Balance on hand Jan. 1, 1894 | $2815 82 |
| Receipts | 5765 85 |
| Total | $8581 67 |
| Disbursements | 7473 36 |
| Balance | $1108 31 |

The advisory committee reported the following decisions:

American Kennel Club *vs.* T. A. Howard—*Re* published letters written by him to E. Bardoe Elliott.—Ordered, That the secretary is hereby directed to notify the Columbus Fanciers' Club that T. A. Howard is not an acceptable representative in the A. K. C., and that said Columbus Fanciers' Club be requested to appoint another delegate in his stead.

Pacific Kennel Club *vs.* E. P. Schell—*Re* misconduct in connection with dogs.—Ordered, That the secretary request the Pacific Kennel Club to state its reasons for acquitting Henry Huber at the time of expulsion of E. P. Schell. The suspension of said Schell to continue pending this information.

Edwin H. Morris *vs.* Danbury Agricultural Society—*Re* appeal to reopen a previous case.—Ordered, That it is the opinion of the committee that the case should not be reopened.

Geo. R. Preston, Jr., *vs.* Edwin H. Morris—*Re* misconduct in connection with dogs.—Ordered, That these charges be dismissed and the deposit of $10 be returned to Preston.

T. A. Howard *vs.* Louisville Kennel Club—*Re* appeal from decision of bench show committee.—Ordered, That the decision of the committee of the Louisville Kennel Club be and is hereby sustained. The deposit of $10 forfeited.

James Watson *vs.* Ben F. Lewis—*Re* misconduct in connection with dogs.—Ordered, That it is the opinion of this committee that the charges were not made and filed in accordance with the rules governing such cases, and that the charge is hereby dismissed.

American Kennel Club *vs.* George Bell—*Re* misconduct in connection with dogs.—Whereas, Bell filed a general denial of the charges, but declined to submit any defence. It is ordered, That the penalty of disqualification imposed on Bell for one year at the meeting of May 3, '94, be and is hereby extended without limit.

Adjourned.

---

The stud book committee reported:

That John Jarvis be reprimanded for carelessness in connection with the issue of beagle pedigrees.

That in connection with the pedigree of a Boston terrier, it be made a subject of inquiry as to whether the breed was rightly entitled to recognition.

The committee on transportation: Mr. Webster stated that his only colleague, the chairman of the committee, Mr. Morris, had asked him to report that the petitions signed had been presented to the Trunk Line Association, and that though there were many difficulties in the way of a favorable decision, they had a promise that the matter should be presented to the board at an early meeting, and it was asked that James Mortimer be put on the committee in time for a full committee to appear before the Association officials at their next meeting. This was done.

The Rochester Kennel Club and New Orleans Fanciers' Club sent in their resignations, which were accepted.

The complaint made by the secretary of non-compliance with the A. K. C. rules at their last show of the Danbury Agricultural Society, brought out a resolution for expulsion, and an amendment for a caution, the latter being carried.

It was resolved that the financial statement for 1894 be published in the *Kennel Gazette*.

The prefix of "Doone" was allowed R. Humphrey Roberts and that of "Eldora" to C. Kersheller. H. F. Schellhass presented for James Watson, as from the committee on rules, a very informal recommendation, that in future those exhibiting at shows not given under A. K. C. rules, where disqualified persons have entered, shall be debarred from all A. K. C. shows.

It was evident that there was no unanimity even in the Rules committee, and it was asked that notice be given through the *Kennel Gazette*, and the motion be made at the next meeting in February.

It was decided on motion that Associates in arrears of dues be dropped from the roll.

The secretary was authorized to change the club's office to more suitable quarters without an increase of rent, and to drop certain bad debts from the assets in his amounts after ascertaining if uncollectable.

It was proposed that the agreement offered to the Canadian Kennel Club be withdrawn, and an amendment that the club be given ninety days to report their decision was finally carried.

Meeting adjourned.

---

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Lawn Russet and Lawn Nonsense.* By Lawn Gordon Setter Kennels, Chicago Lawn, Ill., for black and tan Gordon setter dog and bitch, whelped April 4, 1894, by Regnald H. (Leatherstocking—Smith's Rhoda) out of Nana (champion Argus—Laura).

*Lawn Ivy.* By Lawn Gordon Setter Kennels, Chicago Lawn, Ill., for black and tan Gordon setter bitch, whelped Aug. 16, 1894, by Doc (champion Bellmont—Bess III.) out of Salmont (champion Heather Harold—champion Bellmont).

*Lawn Myrtle.* By Lawn Gordon Setter Kennels, Chicago Lawn, Ill., for black and tan Gordon setter bitch, whelped Sept. 29, 1894, by Pilot of Lorain (Murkland Ranger II.—Bell) out of Chloe II. (Malcolm's Rap—Malcolm's Montrose).

*Lawn Fayaway.* By Lawn Gordon Setter Kennels, Chicago Lawn, Ill., for black and tan Gordon setter bitch, whelped Oct. 22, 1894, by Beaumont, Jr. (champion Beaumont—champion Heather Bee) out of Faymont (Zango—Salmont).

*Monarch's Lad and Monarch's Lass.* By S. B. Allen, Providence, R. I., for black and white ticked English setter dog and bitch, whelped Sept. 26, 1894, by Dad Monarch (Roy Monarch—Blue Jennie) out of Jessie A. (Gene—Lulu).

*Jack Pot and Count's Bess.* By H. Spencer, Marysville, O., for orange and white English setter dog and bitch, whelped June 9, 1894, by Gid (Count of Gath's Mark—Muse) out of Count's Daisy (Count D.—Rake's Bess).

*Mark of Gladstone and Blue Bell.* By H. Spencer, Marysville, O., for black, white and tan English setter dog and blue belton bitch, whelped June 9, 1894, by Gid (Count of Gath's Mark—Muse) out of Count's Daisy (Count D.—Rake's Bess).

BRED.

☞ **Prepared Blanks sent free on application.**

*Careless—King Lud.* J. D. Bush's (Wilmington, Del.) bull bitch Careless (Hotspur—Hampshire Nettle) to J. H. Congdon's King Lud (Pathfinder—Plevna), Oct. 5.

*Blanche Petrel—Breeze Gladstone.* J. C. Maull's English setter bitch Blanche Petrel (Noble Petrel—Ruby II.) to F. G. Taylor's champion Breeze Gladstone, Oct. 3.

*Mabel Petrel—Breeze Gladstone.* R. von Ohl's English setter bitch Mabel Petrel (Noble Petrel—Ruby II.) to F. G. Taylor's champion Breeze Gladstone, Nov. 7.

*Seacroft Jessie—Seacroft Bourbon.* Frank Small's (Ride's Crossing, Mass.) fox-terrier bitch Seacroft Jessie to Seacroft Kennels' Seacroft Bourbon (D'Orsay—Damson), Oct. 24.

*Starden's Vic—Raby Palissy.* Frank Small's (Ride's Crossing, Mass.) fox-terrier bitch Starden's Vic to Seacroft Kennels' Raby Palissy, Oct. 6.

*Seacroft Rachel—Raby Palissy.* Seacroft Kennels' (Manchester-by-the-Sea, Mass.) fox-terrier bitch Seacroft Rachel to their Raby Palissy, Oct. 30.

*Wild Rose—Lawn Chieftain.* Lawn Gordon Setter Kennels' (Chicago Lawn, Ill.) Gordon setter bitch Wild Rose (Beaumont, Jr.—Salmont) to their Lawn Chieftain (Judge S.—Montrose), Nov. 24.

*Lawn Hazel—Lawn Chieftain.* Lawn Gordon Setter Kennels' Gordon setter bitch Lawn Hazel (Pilot of Lorain—Hilda) to their Lawn Chieftain (Judge S.—Montrose), Nov. 11.

*Lawn Fayaway—Lawn Chieftain.* Lawn Gordon Setter Kennels' Gordon setter bitch Lawn Fayaway (Beaumont, Jr.—Faymont) to their Lawn Chieftain (Judge S.—Montrose), Nov. 18.

WHELPS.

☞ **Prepared Blanks sent free on application.**

*Queen of Shenandoah.* Shenandoah Kennels' (Roanoke, Va.) St. Bernard bitch Queen of Shenandoah, Oct. 29, nine (three dogs), by J. D. Lazell's Fernwood Maximillian (Victor Joseph—Dwina Bianca).

*Damson.* Seacroft Kennels' (Manchester-by-the-Sea, Mass.) fox-terrier bitch Damson, Oct. 30, seven (two dogs), by Hillside Kennels' Starden's King.

*Seacroft Empress.* Seacroft Kennels' fox-terrier bitch Seacroft Empress, Oct. 30, three (two dogs), by Woodlawn Park Kennels' Chief Justice II.

*Czarina.* Seacroft Kennels' fox-terrier bitch Czarina, Oct. 30, three dogs, by their Seacroft Bourbon.

*Kingal* Seacroft Kennels' wolfhound bitch Kingal, Oct. 30, five dogs, by their Sorvanets.

*Lady Dietz.* Seacroft Kennels' wolfhound bitch Lady Dietz, Nov. 7, nine (three dogs), by their Col. Dietz.

*Zmeika.* Seacroft Kennels' wolfhound bitch Zmeika, Nov. 14, eight (four dogs), by their Sorvanets.

*Burton Bitters.* Seacroft Kennels' Scottish terrier bitch Burton Bitters, Nov. 17, seven (four dogs), by Brooks & Ames's Rhudaman.

*Grouse II.* Seacroft Kennels' fox-terrier bitch Grouse II., Nov. 17, one, by L. & W. Rutherfurd's Warren Safeguard.

*Bella II.* Seacroft Kennels' Scottish terrier bitch Bella II., Nov. 17, seven (four dogs), by Brooks & Ames's champion Tiree.

*Kaween.* Dr. Lougest's (Franklin, Mass.) bloodhound bitch Kaween, Nov. 12, twelve (eight dogs), by his Belhus.

SALES.

☞ **Prepared Blanks sent free on application.**

*Wild Rose.* Black and tan Gordon setter bitch, whelped December, 1892, by Beaumont, Jr., out of Salmont, by Mrs. W. S Lee, New York city, to Lawn Gordon Setter Kennels, Chicago Lawn, Ill.

*King of Morocco.* Black and tan Gordon setter dog, whelped March, 1894, by Doc out of Wild Rose, by Mrs. W. S. Lee, New York city, to Lawn Gordon Setter Kennels, Chicago Lawn, Ill.

*Seacroft Jessie.* Fox-terrier bitch, by Seacroft Kennels, Manchester-by-the-Sea, Mass., to F Small, Ride's Crossing, Mass.

*Coots.* Black French poodle dog, whelped March 4, 1894, by Carlo out of Frenchie, by Eberhart Pug Kennels, Cincinnati, O., to Prof. Wormwood's Traveling Dog Circus.

*Lady Teazle.* Black and white ticked English setter bitch, whelped Oct. 11, 1893, by Gene out of Florence, by M. J. Flaherty, Providence, R. I., to Dr. C. H. Gardner, same place.

*Seacroft Pearl.* Fox-terrier bitch, by Ruby Palissy out of Damson, by Seacroft Kennels, Manchester-by-the-Sea, Mass., to Mr. Plant, Washington, D. C.

*Seacroft Mystery.* Fox-terrier bitch, by Raby Palissy out of Damson, by Seacroft Kennels, Manchester-by-the-Sea, Mass., to W. Wakem, Chicago, Ill.

*Raby Palissy—Damson whelp.* Fox-terrier bitch, by Seacroft Kennels, Manchester-by-the-Sea, Mass., to Mr. Taylor, Wakefield, Mass.

*Seacroft Bourbon—Brockenhurst Queenie whelp.* Fox-terrier bitch, by Seacroft Kennels, Manchester-by-the-Sea, Mass., to Gordon Prince, same place.

---

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.*

J. E. O., Hamilton, Ont.—The black and tan terrier Broomfield Sultan weighed about 18lbs. when last exhibited.

W. E. R., Reading, Pa.—What is the matter with my pointer bitch, 5yrs. old; she is spayed. After a half day's hunt she lags back and gets very weak. I first thought it was caused by eating grass, but the last time she was the worst and appeared drunk and could not walk; but after being home an hour or two she seemed anxious to start hunting again. During the summer she got a spell in her head and her head swelled to twice its natural size until her eyes were nearly shut. Can you tell me the cause of her sickness? Ans. Try the following:

| | | |
|---|---|---|
| ℞ | Tr. nucis vom | ʒ i. |
| | Liq. arsenicalis | mxxxvi. |
| | Ferri phosph | ʒ i. |
| | Aq. ad | ʒ vi. |

Sig. Mix. Give one dessertspoonful three times a day.

---

# Hunting and Coursing.

### Rabbit Hunting with Horses.

"FIRST catch your hare then cook him" is one of those aphorisms that, like a handkerchief, is never out of date. There are as many ways of catching the hare as there are of cooking it. In late discussions in FOREST AND STREAM the sportsmen who delight in beagle hunting have told us that "ye merrie lytle hounde" transcends all other hounds in the pursuit of the nimble hare, others swear by the foxhound, and then again there are those who pin their faith to the nose of the common "yaller" dog. But no one has yet advanced the theory that one can catch the *Lepus americanus* with a horse or more correctly speaking from horseback. It can be done, however. At the termination of the National Foxhunters' meet at Olympia, Ky., and when about to start for home, we received a telegram from Roger Williams saying that the Iroquois Hunt Club of Lexington had arranged for a "rabbit" hunt on horseback, for Saturday afternoon, Nov. 24, in honor of the representatives of the sporting press who had attended the meet. These were Messrs. John Fox, Jr., Max T. Klepper, B. Hayman and the writer. The rendezvous was to be at Gratz Park, just around the corner from Mr. Williams's house.

Arriving at Lexington at noon we had barely time to partake of luncheon with Mr. and Mrs. Williams, before the horses were brought to the door and mounting we soon found ourselves part of a company of about forty riders, among whom were several ladies. Leaving the city by the Nicholasville turnpike, we cantered along for five or six miles to the Bryan farm and entering a large stubble field prepared to catch "puss" in a manner entirely new to the visitors. Under command of Roger Williams we ranged out in a line, each horseman being about 10ft. from the other. At a given signal the imposing cavalcade proceeded across the field at a walk, every eye intently fixed upon the ground searching for bunny's squatting form. We had scarcely started when a wild whoop proclaimed a find and a gentleman springing from his horse nabbed a "rabbit," which had trusted too confidently to its similarity to a stone to escape detection. Bunny was given a happy dispatch and off we started again. A yell from one end of the line was the signal that another hare was afoot and we were quickly initiated into the novel sport, the object of which is to gallop down the hare. This one, however, made straight for the fence and escaped before we had fairly started our horses.

Lining up again we worked out some more stubble and soon another hare was afoot near the middle of the field. Then ensued a wild scramble on the part of the horsemen to get as near to puss as possible. The hare darted hither and thither, followed at a gallop by the excited horsemen, who were doing their best to keep the game from seeking refuge in the fence. Such turning and twisting and halloaing and helter skelter excitement as ensued passes description. In a few minutes the "rabbit" was showing signs of distress and his rings were getting narrower and narrower, and hedged in by galloping horses on every side he was fast becoming pumped out. Two or three of the nearest horsemen then jumped down, and making reckless dives at the imminent risk of being run over by the horses, one hunter, more agile than the others, fell on puss like a Yale man on a football, and the hare soon received the knock that ended his career. And the doubting Thomases no more doubted that rabbits could be caught from horseback without the aid of dogs. Several hares were put up in this field; but most of them escaped through the fences. Then we took to the roads again, and a ride of a mile or so would bring us to another suitable field, when the same exciting performance would be gone through whenever a hare started and every part of the field ridden over. Sometimes as many as six or seven "rabbits" would be started in one pasture and a dozen dead ones were soon dangling from the saddles of the lucky riders. A big unwieldy horse was soon out of the race, for it takes a small, clever and easily handled horse to follow the turns and jumps that the "rabbit" makes in its efforts to escape.

In crossing from field to field impromptu races and the taking of a fence and a water jump now and then added to the enjoyment of the afternoon's sport. The gloaming found us about ten miles from the city—tired, but delighted with our new experience, and grateful to the ladies and gentlemen of the Iroquois Hunt Club who had afforded us so much enjoyment.

H. W. L.

### Ch. Frank Forest vs. Ch. Royal Krueger.

*Editor Forest and Stream:*

In your issue of Nov. 24 I notice an article written by you in which you quote from a letter received from my friend Mr. C. S. Wixom of Covert, N. Y.

In this letter it appears that Mr. W. states as a fact that champion Royal Krueger has sired Nibs, champion Ava W., Stormy, Ilwaco and Laddie, which lot of five constitute more field trial winners than have been sired by any other beagle.

A casual search of the records does not disprove this statement as I find that champion Frank Forest has sired only four. They are Clyde, June Rose, Gypsey Forest and Blanche. So far champion Royal Krueger has done the most work as to numbers, but the grade of work is very much in Frank Forest's favor. The record shows that Royal Krueger, together with five of his get, has won four first prizes and two second prizes with thirty-one competitors in the various classes. It also shows that Frank Forest, together with four of his get, won six first prizes, three second prizes and two third prizes, with seventy-eight competitors. The totals of competitors are given approximately, as I was governed by memory only, so there may have been a few dogs more or less on either side.

Now, I believe, and I think the public does, that the Hornell-Harmony Kennel has field trial as well as bench show winners, and thus far has bred and furnished to lovers of good beagles a very fair proportion of the whole, but in order that Mr. Wixom and myself and the public may know the relative merits between Royal Krueger and Frank Forest as sires of working dogs, I hereby challenge Mr. Wixom to the following practical test.

Providing that consent of present owners of aforesaid dogs can be secured, I will run Frank Forest and his get mentioned as a pack against Royal Krueger and his get mentioned as a pack, for fun, expenses or for an amount not to exceed $500. The selection of time, ground, judges and other conditions and details to be mutually agreed upon or left to arbitrators. The test to take place on neutral ground and not later than Jan. 1 next, are the only conditions which I exact.

I sincerely trust that neither Mr. Wixom nor any one else will feel or believe that this is in any sense an outcome of any feeling as between Mr. W. and myself, for we always have been, and I sincerely hope are now, the warmest of friends. On perusal of the article first mentioned I simply felt that Mr. W. made rather a broad statement, however true, and it has aroused that small portion of fluid matter under my skin sometimes termed "sporting blood."

H. L. KREUDER.

NANUET, N. Y.

### Coursing the Wolf.

INCREDULOUS persons are ready to doubt if a timber wolf can be run down, but we have in the latest issue of the Hallock (Minn.) *Enterprise* this authentic and trustworthy declaration that "While coming in on horseback Wednesday, Napoleon Jerome saw a wolf and chased him for over two miles, when he overtook him and killed him with a stick." Jerome is a half-breed Indian, educated at Boniface, Winnipeg, and a most excellent hunter. The wolf must have been badly "tuckered" to have succumbed to a stick.

CHARLES HALLOCK.

## HUNTING AND COURSING NOTES.

The following paragraphs were crowded out of our account of the National Fox Hunting Association meet:

The Strode's Valley Hunt Club—which, by the way, can put down a very good pack on a show bench—held open house at the hotel. They occupied a large room, and posted a "welcome" placard on the door and the latchstring hung underneath. The club is composed of representative business men of Winchester, Ky., a town about thirty miles from Olympia, and they are doing good work for the foxhound of the South.

• • • •

About half a mile from the Olympian Hotel, situated at the foot of the hills, nestles a cosy hunting lodge that is kept up by sportsmen from Mt. Sterling, consisting of Col. A. W. Hamilton, A. M. Bedford, Howard Anderson, J. W. Chenault, J. W. Gatewood, John King, J. Will Clay and Capt. Jack Stewart. Gen. Gentry felt that he would like to entertain some people, so the campers tendered him the use of the cottage for this laudable purpose. The lucky ones who participated were Mrs. H. P. Thomson, Mrs. Silas Evans, Mrs. E. W. Herr, the Misses Carrie Lee Hathaway, Lady Prewitt, Mayme Robinson, and Messrs. John Fox, Jr., Max T. Klepper, A. B. F. Kinney, Basil Hayman, H. W. Lacy and Dr. B. W. McClure. To quote Mrs. Herr, "With the grace of manner that is characteristic of them, Gen. Gentry and the hosts of the cottage received their guests, who gave themselves up in joyous surrender to the occasion and a delightful acceptance of all it afforded;" and this was wild turkey, which the General had shot with a—well, we won't give it away, and mountain pig, which Newton Williams, the cook, had prepared so deliciously. Col. Hamilton and Capt. Jack served us in such clever fashion, that one way of earning a living is ever open to them if they need it. Seasoned with merry jest and quip, the bounteous repast could not fail to please, and happy speeches from Gen. Gentry, Col. Hamilton and Mr. Fox, who responded for the press, rounded off an entertainment that was as unique as it was unexpected.

It was wondered why Sam Redd, a noted Lexington fox-hunter, was not at the field trials with some of his noted hounds, but it seems that during the week while his hounds were running, some one shot into the pack with buckshot and the eyes of two of the best hounds—Admiral Jouette's Howard and Roger Williams's Topsy, were shot out. The latter bitch it will be remembered won first at Chicago last spring. Other hounds were injured but we could not ascertain to what extent. Mr. Williams can console himself with a litter of nine bloodhound pups that his Vigilant whelped to Alchemist during the week of the foxhound meet.

### Smith Ejectors.

ANTICIPATING that there would be in time a demand for a thoroughly practical ejector gun at a moderate price, we are now ready to fill orders for same ranging in price from $60 to $500. Thinking it would be of interest to the readers of the FOREST AND STREAM to know that they can get a Smith gun of any grade with an ejector attached, we invite your attention to a few facts in the case. Our motto, "We lead and others follow," prompted us to put the first American ejector on the market, this gun has never been changed, and is the same perfect mechanism to-day that was put on the first gun of the kind shipped from the factory. The Smith ejector gun as made by the Hunter Arms Co., of Fulton, N. Y., is no experiment; three years of the roughest kind of usage has proven conclusively to its friends and convinced its enemies that it is a practical success. By actual count of parts it is the simplest ejector in the world, any one can understand its principles at a glance. A very important feature about all of the Smith guns is that they are the only guns made in the world which are guaranteed in every particular and also to shoot any nitro powder made and not get loose.—*Adv.*

# Yachting.

THE two documents which have been received since our last issue and which are printed herewith cover a number of very important points mixed up in a rather confusing manner. In giving them that careful consideration which they deserve, it is necessary to rearrange them in the order of their importance.

The clauses relating to the primary conditions of a match, the terms under which a challenge is made and accepted and the trophy delivered to a possible winner, are those which we have numbered in the the challenge 1, 2 and 3; and in the letter, 2, 5, 7, 9, 10, 11 and 12.

The clauses relating to the secondary conditions, such minor details of the racing as properly come under the "mutual agreement" clause, are all confined to Lord Dunraven's letter, Nos. 3, 4, 6, 8, 9 and 12.

---

THE points touched upon in the various clauses first mentioned are two: First, the question whether or no the races of 1893 were sailed under the new deed of gift, and, secondly, the departures which may be made from the literal terms of the new deed.

It is evident that the Royal Yacht Squadron and Lord Dunraven still persist in ignoring the patent fact that the last races were sailed under the new deed and nothing else, in spite of the lame and awkward attempt of the New York Y. C. to modify some of the more objectionable clauses.

It is no less true that the waiving of the dimension clause and the acceptance of one instead of four dimensions, was illegal in 1892, and that a similar action this year, as suggested in Clause 3 of the challenge and Clauses 5 and 10 of Lord Dunraven's letter, would be equally illegal; and would offer good ground for an objection on the part of any member of the club to the delivery of the Cup to the challenger should he be successful in the races.

The first point involves a lengthy discussion, which will be found in another column. The second will be clear to any one who understands the English language and will read the specific provisions of the new deed, as to what must be given in a challenge.

We may say briefly that the communication of the Royal Yacht Squadron is not a "challenge in due form," and that as long as the new deed exists, the New York Yacht Club has no power to recognize it and arrange a race in compliance with it.

---

LORD DUNRAVEN'S satisfaction, as expressed in Clause 7, will be shared by all yachtsmen who wish to see the America's Cup elevated to its true position as the great emblem of international supremacy in yachting; but at the same time, we question the right of the New York Y. C. to accept as a challenger any yacht not specifically mentioned and identified by her four dimensions in the challenge. The wording of the new deed is so clear and explicit as to leave no room for argument on this point.

---

THE secondary conditions are a mere repetition of Lord Dunraven's former letter, and may be briefly disposed of. The matter of measurement and marking of the loadline, including the question of a "ballast crew," has been settled very fairly by the Cup committee. Lord Dunraven still harps on the Marblehead course and the windward start, regardless of the unreasonable nature of the one proposition and the impracticable nature of the other. It is evident that his Lordship is laboring under the delusion that Marblehead is an island in the open sea, and that from it a windward course can be laid out, regardless of the direction of the wind. On the contrary, it is situated in the angle of an L quite as pronounced as the shore contour about Sandy Hook, and with the wind from anywhere in the three shore quadrants, a very long tow would be necessary to secure a start to windward. His proposal for a windward start for all races, and for the abandonment of those races in which no windward work is possible, would result in prolonging the contests through an indefinite period; and are too impracticable to be considered for a moment.

The remarks of Lord Dunraven on the "one gun" start are very much to the point, and we regret that the committee has not met his wishes in this respect.

---

WHILE a ten months notice is one of the indispensable requirements of a legal challenge, it is unlike the demand for the four dimensions, in that it is specifically recognized as one of the secondary details subject to the "mutual agreement" clause. The giving of ten months notice is compulsory in order to assure the legality of the challenge; but this notice once given, the club is directly empowered to waive it and to agree to an earlier date. At the same time there is a very general feeling on this side that the New York Y. C. would be quite justified in adhering to the letter of the new deed, and not only declining to accept Lord Dunraven's suggestion of a race within eight months, say in August or September in place of October; but in going much further and declining any challenge for 1895, which does not name a date within ten months. It is held, that Lord Dunraven, having already sailed for the cup, is perfectly familiar with the terms laid down, and that his intention of again challenging was informally announced by him over a year ago. He has had every opportunity and inducement, not only to open preliminary negotiations, but to send a formal challenge at least six months ago, and yet has waited so long that the acceptance of his challenge must place the defenders at serious and needless disadvantage. Considering how much there is to do in the organizing of syndicates and the preliminaries of the actual building, all of which is unnecessary in the case of the challenger, the defenders are not allowed necessary time for preparation.

---

WE have repeatedly pointed out in the course of the last five years that in spite of all the nonsense about the "mutual agreement" clause, the ultimate test of the recognition or repudiation of the new deed lies in the final clause defining the document essential to a transfer of the Cup if won. Our position on this point is now indorsed by the last statement of the committee, that "if the challenging club will sign a receipt as provided in the new deed of 1887, we will accept the challenge." It has always been understood by the New York Y. C. that this same condition maintained in the Valkyrie-Vigilant match; it now remains to be seen whether Lord Dunraven and the Royal Yacht Squadron will realize and appreciate this vital point of a challenge, or will persist in ignoring it and discussing petty details and extraneous conditions.

In an interview in the New York *Times* Mr. H. Maitland Kersey disposes of Gen. Paine's interpretation of the "mutual agreement" clause in the following terse and concise statement: "As for the much talked of mutual agreement clause, that was simply a clause which related to minor details, such as the courses, whether they should be sailed to windward, and other necessary arrangements relating to a match. In fact, the new deed of gift is *de facto*, while the mutual agreement clause is *in futuro*, as it does not come into existence until after the challenge has been accepted."

---

THE Larchmont Y. C. has shown a commendable example of most unusual activity in setting to work immediately at the end of one season to arrange plans for the next. The usual order of things in yachting is to drop everything when the yachts lay up in October, and when the experiences of the season are fresh in mind, and to resume work at or after the holidays, when men are occupied with other things and have partly lost interest in yachting. The announcement of the club's fixtures for 1895 was made on Nov. 20, 1894, the whole season's work being thus well mapped out long in advance.

The work of the special committee on the new classes was also begun in season and pushed promptly to a finish, so that members desiring to build are in a position to make contracts at once, at good figures and with a chance of getting their boats in shape before July.

We hope that some of the other neighboring clubs will follow the example of the Larchmont and arrange their fixtures before the new year. What is needed on the Sound is a conference of the many yacht clubs interested in racing, for the purpose of arranging such a circuit as was recently suggested by one of our correspondents. There being no body properly charged with the summoning of such a conference, the initiative rests with the larger clubs, such as the Seawanhaka-Corinthian and Larchmont. Any move on the part of these two would probably meet with the co-operation of all the others, to the decided benefit of racing next season between New Haven or New London and New York.

We call the attention of clubs about Boston and in other places to the desirability of an early selection of dates, and also of announcing them in order that other clubs may avoid the selection of the same.

---

## The Valkyrie—Vigilant Match.

THE challenge of the Royal Yacht Squadron and the various letters of Lord Dunraven referring to the "terms of the Valkyrie-Vigilant matches" make it necessary to unearth a lot of threadbare detail which should have no bearing whatever on the merits of a new challenge. As partly explanatory of the matter in dispute, we quote as follows from our report in the FOREST AND STREAM of Dec. 15, 1892; of the special meeting of the New York Y. C. on Dec. 12, at which the challenge was accepted:

The report of the Cup committee was read, giving the entire correspondence with Lord Dunraven and the Royal Yacht Squadron, including the challenge, as follows:

ROYAL YACHT SQUADRON CASTLE,
COWES, Nov. 25, 1892.

DEAR SIR—I am requested by the Earl of Dunraven to forward you a formal challenge for the America's Cup on the following conditions, which, I understand, have been agreed to between Lord Dunraven and the committee appointed by the New York Y. C. to conduct negotiations and arrange all details, viz.:

First—The length upon the load waterline of the challenging vessel to be the onlo dimensions required. This to be sent with the challenge and the Custom House register to follow as soon as possible.

Second—Any excess over the estimated length on the load waterline of the challenging vessel to count double in calculating time allowance, but the challenging vessel not to exceed in any case such estimated length by more than two per cent. The yacht that sails against the challenging vessel not to exceed the estimated length of the load waterline of the challenging vessel by more than two per cent., and any excess of length beyond the estimated length of the challenging vessel on the load waterline to count double in calculating time allowance, providing that no yacht of the specified rig existing or under construction on Oct. 20, 1892, and available for the use of the New York Y. C. in defending the Cup, shall be barred or penalized beyond taking or giving the ordinary time allowance according to the New York Y. C. rules.

Third—It is to be understood and agreed that should the Cup come into the possession of a British yacht club it shall be held subject to a challenge on precisely similar terms to those contained in this challenge, provided always that such club shall not refuse a challenge, according to the conditions laid down in the deed of 1887.

Therefore, on behalf of the Royal Yacht Squadron and in the name of the Earl of Dunraven, a member of the squadron, challenge to sail a series of matches with the yacht Valkyrie against any one yacht or vessel constructed in the United States of America for the America's Cup, and I would suggest that the matches should be sailed in August or September, 1893. Lord Dunraven would be glad if the precise date can be left open for a time, but if your committee so desire he will name an exact date on hearing from them.

The following are the particulars of the challenging vessel:

Owner—Earl of Dunraven.
Name of Yacht—Valkyrie.
Rig—Cutter.
Length on Load Water Line—85 feet.

The Custom House measurement will follow as soon as the vessel can be measured for registration.

I shall be much obliged if you will cable me the receipt of the challenge and let me have a reply by letter as soon as the matter has been laid before the committee. I have the honor to be, dear sir, your obedient servant,

RICHARD GRANT,
Secretary Royal Yacht Squadron.

To J. V. S. ODDIE, Esq., Secretary New York Yacht Club.

The report of the committee continues:

"In regard to this challenge your committee would report as follows:

"Your committee had agreed to recommend for acceptance a challenge based on Lord Dunraven's letter of Nov. 7, in which he writes: 'I trust * * * that a challenge on the terms of my former letter, as herein modified, will be accepted.'

"In the former letter here alluded to, that of Sept. 16, to Mr. Oddie, Lord Dunraven writes: 'I will sail a series of matches under the rules of the new deed of gift, with the following exception and addition:'

"This clause your committee considers as the basis of the whole negotiation.

"The terms of this letter to Mr. Oddie had been declared by the New York Y. C. as acceptable with certain exceptions which do not affect the force of the clause above quoted. The challenge contains no reference or equivalent to this clause, but purporting to recapitulate the stipulations required and agreed to, fails to characterize them as exceptions or additions at all and so does not even imply the existence of other and very important conditions of the deed, such, for instance, as the covenants and agreements required on the part of the winner of the America's Cup under the rules of the new deed of gift. Further, the challenge in no way sanctions the use of the preceding correspondence for the purpose of its interpretation.

"Your committee feared that this omission from the challenge of the explicit statement contained in Lord Dunraven's letter might involve a risk of some future misunderstanding, and considered that the most expeditious method of preventing any possible misunderstanding would be to obtain authority from Lord Dunraven to use his letters on which the challenge was to be based as explanatory of the challenge itself.

"As the committee feared that the limited time would prevent the obtaining of an authorization by the Squadron to so use Lord Dunraven's letters, the following cable was consequently sent:

'NEW YORK, Dec. 6, 1892.

'*Lord Dunraven, 27 Norfolk street, London:*

'Challenge, if explained by your letters, satisfactory. Do you agree? Club meeting Tuesday. PAINE.'

"To this the following reply was received:

"ADARE, Dec. 7, 1892.

'*Paine, New York Yacht Club, New York:*

'Copy following cablegram received: Challenge, if explained by your letters, satisfactory. Do you agree to club meeting Tuesday? Message ends I don't understand. Challenge is in accordance with your cablegram of 22d. DUNRAVEN.'

"As it appeared from this that the committee's cable had been rendered obscure by an error in transmission, the following cable was sent on Dec. 7:

'*Lord Dunraven, Norfolk street, London:*

"Will you authorize us to use your letters Sept. 16 and Nov. 7 as explaining challenge? PAINE.'

"On Dec. 9 the following cable was received:

LONDON, Dec. 9, 1892.

'*Gen. Paine, New York Y. C. New York:*

'Yes, certainly. Cable definitely London. DUNRAVEN.'

"As above requested to reply definitely, the committee sent the following cable:

'NEW YORK, Dec. 10, 1892.

'*To Lord Dunraven, Norfolk street, London:*

'Your September letter proposes match according rules new deed with modifications. Challenge states these, but not as exceptions or additions to new deed. Your cablegram, "Yes, certainly," is satisfactory. PAINE.'

"On Dec. 12 the following cable was received:

'LONDON, Dec. 12, 1892.

'*To Paine, Yacht Club, N. Y.:*

'Have no authority from Squadron relying on yours Nov. 22. Believing everything finally settled, challenge forwarded terms. Your requested alteration impossible. I cannot further delay. Please cable definite acceptance or refusal. DUNRAVEN.'

"At half-past twelve A. M., Dec. 13, the following cable was sent by the committee:

'NEW YORK, Dec. 13, 1892.

'*To Lord Dunraven, Norfolk street, London:*

'Committee meeting and club meeting to-day. Will cable result immediately. PAINE.'"

The report, which was signed by Charles J. Paine, James D. Smith Latham A. Fish, Archibald Rogers and A. Cass Canfield, ended as follows:

"In conclusion your committee would offer the following resolution:

'*Resolved*, That this club accept the challenge of the Royal Yacht Squadron, in the name of the Earl of Dunraven, for the America's Cup, the match to begin ten months from Dec. 5, 1892, the date of the receipt of the said challenge by the New York Y. C., but the date of the match to be subject to alterations for mutual convenience and by mutual consent.'"

The resolution was put to a vote and carried unanimously, after which the meeting adjourned, the result being immediately cabled to Lord Dunraven and Secretary Grant of the R. Y. S.

---

As regards the cablegram of Dec. 12, which is mere nonsense as read when received, during the meeting; its true reading, as afterward deciphered, was as follows:

"Have no authority from the Squadron. Relying on yours of Nov. 22, believing everything finally settled, challenge forwarded, terms you requested.

"Alteration impossible. I cannot further delay. Please cable definite acceptance or refusal."

This is a distinct statement that Lord Dunraven had no authority to consent to a race on behalf of the Royal Yacht Squadron under the new deed of gift.

At the same time he had already written to the New York Y. C. that he would "sail a series of matches under the rules of the new deed of gift," and at the dictation of the Cup committee he had obediently withdrawn an allusion to the former deeds of gift which might be construed as reflecting upon the new deed.

In spite of the straining and distortion to which certain clauses of the new deed were subjected by the club and committee in the coveted attempt to obtain a race under it, the committee from the very first asserted most strenuously that the challenge was under the new deed, which point was adhered to throughout the whole correspondence, and would have been most rigidly enforced had Valkyrie finally defeated Vigilant.

---

## The Centerboard.

THE recent remarks of Mr. Lewis G. Nixon on the centerboard have brought out the following comments in the *Field:*

"The Boston yacht designers are said to disagree with Mr. Nixon as to the utility of centerboards, and Mr. A. Binney, who designed the unfortunate Pilgrim, is said to hold the belief that centerboards are somewhat of a nuisance, but 'sportsmanlike,' which Mr. Nixon said they were not. What a centerboard has to do with the sport, or sport with a centerboard, it is difficult to say. It is pretty certain, however, that if the Vigilant had been fitted with a deeply placed lead keel, somewhat like the Britannia's, instead of a centerplate, she would have been much improved for all round sailing.

"Talking of all round sailing, it is said the new America's Cup challenger is to be built for dead to windward and dead to leeward sailing only, the same as the Vigilant was. It is also said that the Vigilant's failure on this side of the Atlantic is mainly attributable to the fact that she was not built for 'all round sailing' over ordinary regatta courses. But we do not see the force of this argument, unless it can be proved that the Vigilant was superior to windward on her home courses to the Valkyrie. It can scarcely be claimed that, generally, she was superior to the Britannia to windward in this country, although she undoubtedly many times reached faster. Some years ago, when the Sea Belle came out, and showed us what a schooner could be made to do to windward, it was thought she lacked in speed reaching; her successor, the Miranda, was accordingly designed to have greater reaching powers, but as a matter of fact she was more weatherly than even the Sea Belle, but could not reach quite as fast. We think this alleged designing of yachts for specific purposes is somewhat a matter of uncertainty, and the Vigilant, whatever she was intended to do, certainly could be termed a good all round performer, without any special distinction on any point of sailing over and beyond another point."

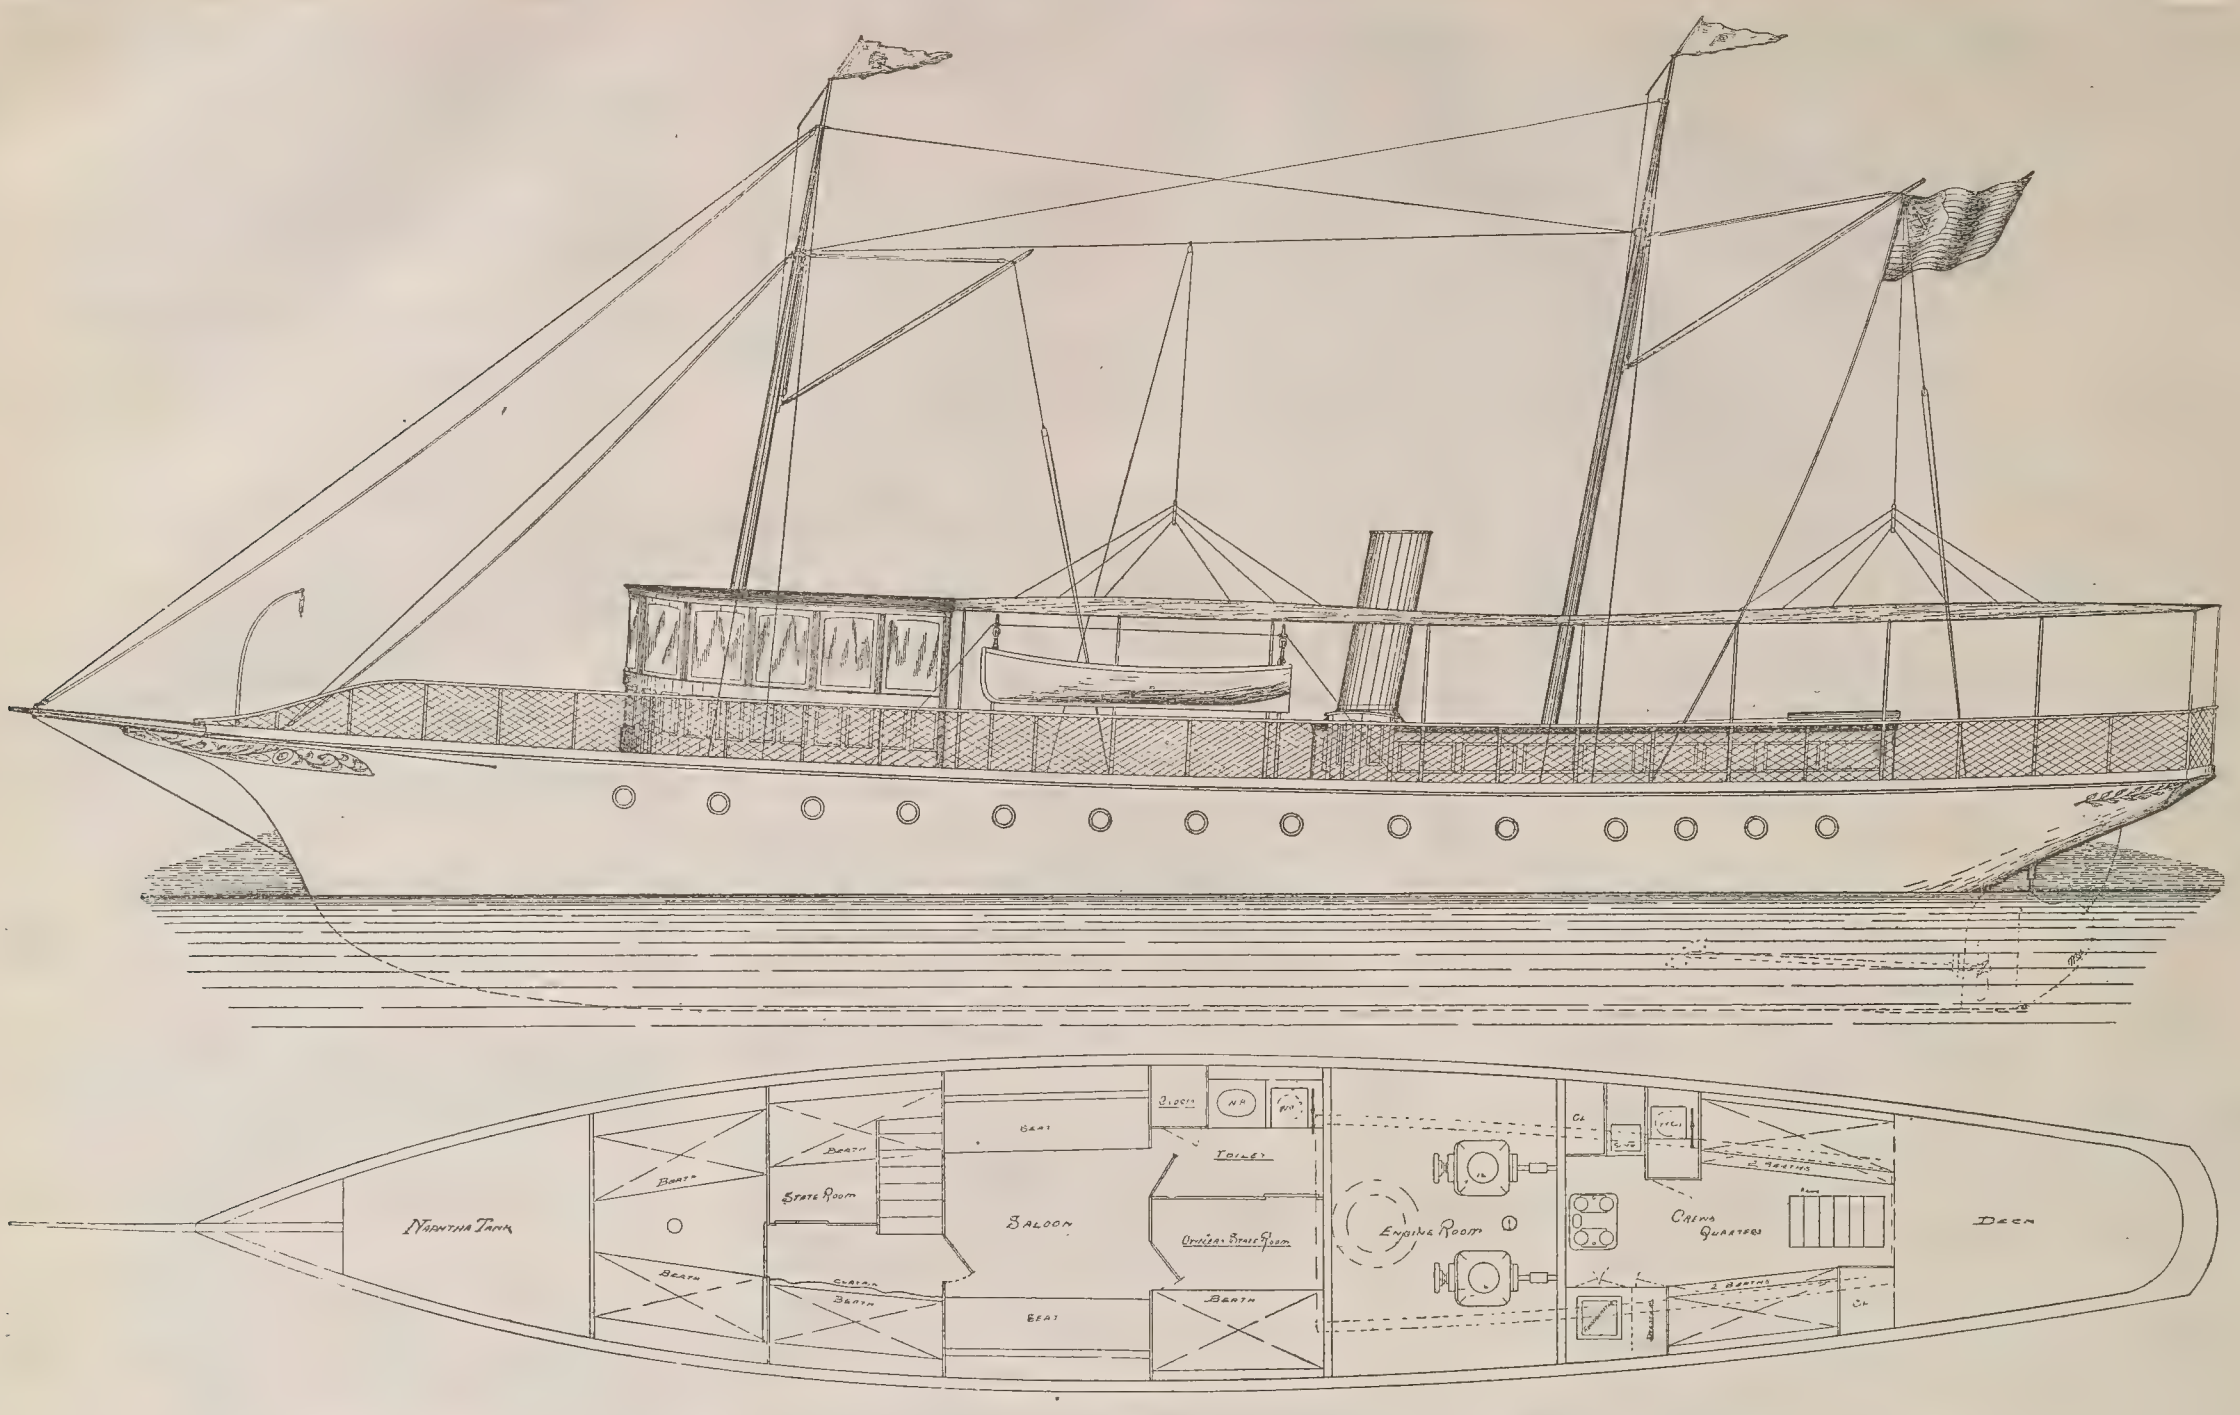
---

## Yacht Building on the Pacific.

WE are indebted to the San Francisco *Call* for the following description of a novel and interesting craft, sooner or later to be added to the pleasure navy of the Pacific metropolis. We cannot but admire the graphic and picturesque description, and we hope that when completed the craft herself will not discredit it:

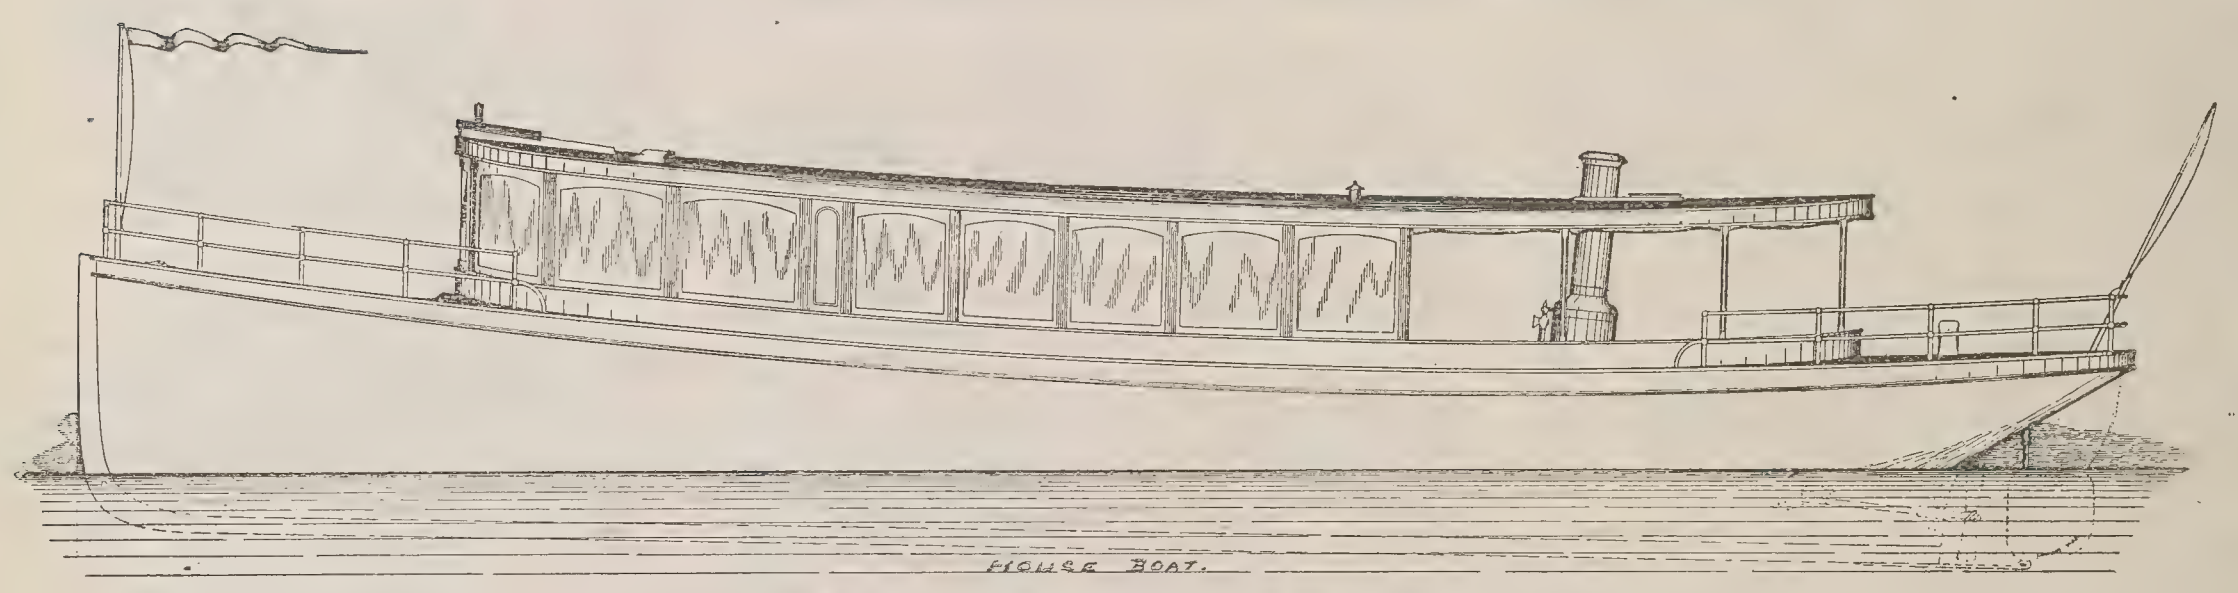
"Some months ago several young men started to build a racer at the foot of Hyde street and it was this action that gave birth to what will be one of the most wonderful craft afloat (that is if she floats).

"In a little cover at the foot of Fort Mason and next to the old Pioneer woolen mills there dwells a boatman who up to a few months ago lived a life of ease and contentment, but when these young men began to shape their craft his soul was fired with an ambition to originate a craft that would be a world-beater. Many long, dark, dreary nights were spent in calculating and drafting lines until his ideal was reached. One morning the inhabitants of the adjacent district were startled by the music of the hammer and from that time on this dream began to take on form, until to-day its realization is very near ready for launching.



"A visit to where she is being built will repay those who take it. When her builder was seen regarding the definite figures of her construction it was found that the whole surroundings were filled with an air of mystery which reminded one of the reports from the East of the cup defenders.

"From the natives thereabout it was learned that she was 42ft. over all, 15ft. beam and about 30ft. on the waterline. She has a keel of about 12in. deep which starts at the rudder-post and keeps its width until the bowsprit is reached. The floor of the keel proper is straight until the waterline is nearly reached, when it takes an upward shoot, giving her a big overhang. This keel running up her stem is supposed to steady her and gives those aboard time to think when she is going about.



"The midship section is a study. It has a flat floor, with a sharp dead rise till near the water line, where it broadens out a little until the latter place is reached, when the freeboard starts to tumble home.

"The stern has an air about it of the Vigilant, with the cast of countenance of Columbus' Santa Maria. It rises from where the sternpost intersects the hull at about 45 degrees, tapering out to a very narrow transom, which is one of the prominent features of the craft. It is here that the likeness to Columbus' good old boat is noticed in the plaster-of-paris fancy-work, which has an ancient look. It is said that the builder had a window in the stern overhang, which some one mistook for a hencoop, and that this so disgusted him that he removed it.

"Her planking is of one-inch stock and the cabin two-inch. She has

TWIN SCREW NAPHTHA YACHT—DESIGNED AND BUILT BY THE GAS ENGINE AND POWER CO., 1895.

TWIN SCREW NAPHTHA HOUSE BOAT—DESIGNED AND BUILT BY THE GAS ENGINE AND POWER CO., 1894.

a flush deck, except where the cabin and manhole for the helmsman is. The seams are calked in with burlap and filled in with putty, the inside is covered several inches thick with tar and pitch to preserve her. The companion-way, instead of leading into the cabin from the center of the yacht is close to the port side, which will necessitate her sailing almost exclusively on her starboard side in rough weather.

"As this was the extent of the knowledge of those about the neighborhood, it will be impossible to say what her sail-plan will be, except that she will be a schooner."

## Large Naphtha Cruisers.

THE great convenience and efficiency of the naphtha engine in small open craft, and even in cabin boats of 35 to 40ft., has long since been demonstrated by the success of hundreds of the craft turned out by the Gas Engine and Power Co., but in the sizes above these the work has been largely experimental. In the two yachts here illustrated, the possibilities of naphtha propulsion in larger sizes is clearly shown, one boat in particular being considerably in excess of any previous attempt with this form of power. This craft is well outside the launch class, being a flush-decked twin screw yacht, with schooner rig; a type in which the steam engine and coal-burning boiler has thus far held its own against other more compact and convenient motors.

This yacht, now under contract at the Morris Dock works of the company, will be 78ft. over all, 64ft. l.w.l., 13ft. beam and 4ft. 6in. draft. The specifications call for a high class of work; frame of selected white oak and yellow pine, all fore and aft members in single lengths, the frames steam bent, and all exterior fastening of copper clinched over washers. The bulkheads are also protected by a sheathing of copper, and are air as well as watertight.

The foremost space in the yacht, 15ft. 6in., is devoted to the naphtha tank, thoroughly separated from the rest of the boat. The next 7ft. are devoted to a single state room, then a length of 6ft. 2in. gives two rooms side by side, abaft which is the saloon, 8ft. 1in. long. The next space, 6ft. 11in., is devoted to the owner, state room to port and toilet room to starboard. The engine space is 9ft. long, with double bulkhead at each end, inside of which is a complete lining of mild sheet steel. The galley occupies a length of 4ft. 2in., and the crew space is 8ft. 10in. the counter being 12ft. 8in. long.

The pilot house and trunk cabin are of mahogany, the staterooms are finished in white pine, as in the saloon, the toilet room in cherry, the stairs in quartered oak, and the galley and forecastle in ash.

The power will include a twin outfit of the firm's 16 H. P. motors and screws. The specifications call for the yacht complete with al appurtenances, two boats, anchors and chains, awnings, lamps, cabin carpets and upholstery, engine room equipment and all minor furnishings.

The smaller craft may be classed as an auxiliary houseboat rather than a yacht, the main object being accommodation, and speed and handiness being of secondary importance. At the same time the boat will be thoroughly self-propelling; and capable of extended cruising. Her dimensions are: length over all, 44ft.; beam, 13ft.; draft, 2ft.

The nature and extent of the accommodations are clearly shown in the drawing. The cabin house is of mahogany with sliding glass windows on all sides, fitted with blinds and screens. The furniture is finished in plush with hair filling. The cabin will accommodate four persons, while the crew—pilot, engineer and cook, are berthed in the engine space. The motive power includes two 6 H. P. engines and twin screws. The boat is of moderate cost and very economical in maintenance, the draft is very light and the engines are of simple construction. The owner is Mr. Chas. A. Dean, of Boston, Mass., a tarpon fisherman, and the boat will be used about Punta Gorda, Fla., going South under her own power.

## Lord Dunraven's Challenge.

THE past week has been an exciting one about New York, it being reported that a formal challenge had been sent by the Royal Yacht Squadron, on behalf of Lord Dunraven, due here about Dec. 11. This report was current when we went to press, on Tuesday, Dec. 4, but was contradicted by cable from London. On Wednesday, however, Sec'y. Oddie cabled to Sec'y. Grant, of the Royal Yacht Squadron for definite information, and received in reply on the same day the full text of the challenge, as follows:

"COWES, Dec. 6, 1894.

1. Oddie, New York Yacht Club, New York: Challenge posted here Sunday night. I am requested by the Earl of Dunraven to forward you a challenge for the America's cup on the terms and conditions of the challenge sent by me on his behalf on the 25th November, 1892, but subject to any modifications as to dates, courses, starts and other details which may be agreed to between Lord Dunraven and the committee appointed by the New York club to conduct negotiations and arrange all details.

2. "I, therefore, on behalf of the Royal Yacht Squadron, and in the name of the Earl of Dunraven, a member of the squadron, challenge to sail a series of matches with the yacht Valkyrie against any one yacht or vessel constructed in the United States of America for the America cup.

3. "The following are the particulars of the challenging vessel, viz.: Owner, the Earl of Dunraven; name of yacht, Valkyrie; length on load water line, 89ft.; custom house measurement will follow as soon as the vessel can be measured for registration.

4. "I shall be much obliged if you will cable me the receipt of this challenge and let me have a reply by letter as soon as the matter has been laid before the committee. GRANT, Cowes."

A copy of the challenge was made and sent to ex-Com. James D. Smith, at his home in Stamford, and the original message was locked up in the club safe, pending a meeting of the Cup committee on Thursday, at which were present Messrs. Smith, Canfield, Fish, Rogers, Iselin and Kortwright, only Mr. Tams being absent. The committee took no action pending the receipt of a letter from Lord Dunraven in explanation of the challenge, which, it was known, had been mailed on Dec. 1, and thus might be expected on the Campania. The committee declined to make public the above challenge until the letter was received. The Campania came in on Saturday, the mail being delivered in the afternoon, and the same evening a copy of the following letter was posted by Sec'y Canfield on the bulletin at the club house:

ADARE MANOR, ADARE, County Limerick, Dec. 1, 1894.

1. SIR:—I have the honor to acknowledge the receipt of your letter of the 15th inst., advising me of the appointment of your committee, and replying to my letter of Oct. 25, to Mr. Oddie, on the subject of a challenge for the America Cup.

2. In regard to your remarks concerning the proviso in Paragraph 3 of the challenge issued on my behalf in 1892. Without expressing any opinion, I must point out that the club issuing the challenge can alone have power to deal with such a matter, and that if it be referred to the Royal Yacht Squadron, it is quite impossible that their decision, whatever it may be, could be obtained in time to insure a match next year. It never occurred to me that any difficulty would arise, in the acceptance of a challenge identical with that of 1892. If your committee are unable to accept such a challenge, it is quite certain that no challenge can be sent; but in the hope that I may not be thus disbarred, I proceed to consider the other points mentioned in your letter.

3. I am glad to find, as I expected, that on the question of measurements and weights, we are in complete accord. The supplementary conditions set out on page 30, of the report of the America Cup Committee to the New York Y. C., are not, I think, quite satisfactory, but the points involved are merely details which can easily be settled by further correspondence or after my arrival.

4. Starting the windward and leeward races to windward, I consider most important. That they should be so started has always been admitted.

It is very advisable, in order that the object of the provision that the majority of the races sailed must be to windward, should not be frustrated by change of wind. I would point out that the first supplementary condition on page 30 of the report gives the Regatta Committee power to shift the starting point, and that under this power a start could, in almost all cases, be made to windward, though perhaps with some considerable inconvenience. I think, also, that some attempt should be made to windward and leeward, and suggest the insertion of some provision to the effect that if one of these races is started down wind and either vessel fetches back without a tack, that race shall be void. These questions cannot be decided off hand, and, provided the principle is recognized, I am quite content to leave details for future consideration.

I would therefore accept your suggestion omitting the words "Sandy Hook or Scotland Lightship." It would then read, "that all races should be started to windward if possible."

5. I note the confirmation of your cable message to the effect that the load waterline is required, and to that I agree.

6. I greatly regret that the New York Y. C. has been unable to accede to my request that the match should be sailed off Marblehead. One inconvenience attaching to the course of last year is patent in the difficulty, and perhaps the impossibility, of starting all the races in the way we are all agreed they should be started—namely, to windward. The main consideration is to select courses as free as possible from obstruction. I need not again allude to the difficulties experienced last year in keeping a clear course; they are as well known to your committee as to me.

As far as I know, no particular course or locality has been laid down for these international races, and I hope the New York Y. C. may reconsider my request on its merits. I do not at all insist upon it, feeling, as expressed in my former letter, that those possessed of local knowledge, and who have to provide, as far as possible, a clear course, are the best judges.

7. I am glad that your committeee will recommend that an original challenge may be withdrawn, and another substituted, subject to the conditions mentioned in your letter.

8. With regard to the "one gun" start, that method of starting is, I think, far preferable to the plan you propose, especially in a match. Two minutes may represent, owing to variations in the force of the wind occurring between the start and finish, anything from one hundred yards to half a mile, and your proposal consequently introduces an element of chance, which is avoided where both yachts start practically together, as under our system.

Should they not start together, the advantage gained is surely a legitimate one, arising from superiority or handiness of handling.

But as your committee feels strongly that the ordinary custom of the club should be adhered to, I accept their proposal.

9. As to the ten months' notice, I must request your committee to waive this, to the extent of accepting a notice of eight instead of ten—the exact date of the first race to be settled later on.

Sailing in October or even late in September makes it very late in the season for bringing a vessel home, and may inflict such great inconvenience to a challenger that I could not undertake to do it.

10. In order to assist your committee in this respect, I may say that I shall challenge with a cutter 89ft. on load waterline, and that I have to-day requested the secretary of the Royal Yacht Squadron to forward a challenge for me, according to the terms of my challenge of 1892.

11. The only questions requiring a speedy answer are: First, will the committee accept a challenge identical with my challenge of 1892?

12. Second, will they consent to shorten the terms of notice to the extent I have requested? As I shall have to build, fit the vessel out three times and cross the ocean, time is of great importance to me, and I should feel greatly obliged if you will cable me the decision of your committee on these two points.

13. With many thanks to your committee for their kind offers, I have the honor to remain yours very faithfully, DUNRAVEN.

A meeting of the Cup committee was convened at ex-Com. Smith's office on Monday, Dec. 10, at noon, all the members being present. The two documents were discussed at length, the meeting lasting until 4 o'clock. As a result of the discussion, the following cable was sent to Lord Dunraven, supplemented by a letter by mail:

"NEW YORK, Dec. 10, 1894.

"*Dunraven, London:*

"Can agree to no conditions as to holding the Cup. If the challenging club will sign a receipt for the Cup, as provided in the deed of 1887, we will accept the challenge.

"We must adhere to the ten months' notice from Dec. 6, but will advance dates later if possible.

"We think best to leave all other unsettled questions until your arrival. JAMES D. SMITH, Chairman."

## YACHT NEWS NOTES.

The annual dinner of the Victoria Y. C., of Hamilton, Ontario, was held on Nov. 20, 143 members and guests taking part. Commodore, the Rev. C. Whitcombe, presided. After a very nautical menu had been disposed of, the night was finished with toasts and songs. The club is now in a very prosperous condition, with a large membership.

Messrs. Gardner & Co. have placed a contract with Roach's shipyard for a steel steam yacht of 140ft. length for an unknown owner. The design is radically different from the ordinary steam yacht, somewhat of the type of naval vessels, with a plumb stem of very light curvature, a high side and a sheer that is quite straight, but as true and fair as in all of Mr. Gardner's designs. The after end is a novelty that is difficult to describe, but promises to look well, the lines tapering in with a clean sweep to a curved horntimber such as is found in the old elliptical sterns of so many American steam yachts. The effect, however, is much lighter and better. The engines will be triple compound, of special design. The firm have also two very beautiful designs for 35-footers of the Pyxie type, both of which will be built; one for Mr. George Bullock, of Oyster Bay.

The Erie (Pa.) Y. C. has just been organized with the following officers: Com., Geo. P. Bliss; Vice-Com., Geo. Berriam; Rear-Com., C. C. Weeks; Sec'y, E. R. Lynch; Treas., W. Reitzel; Meas., William Marks, Jr.; Ass't Meas., Wm. Morrison; Surveyor, Dr. Harvey. The club will build a house and establish an anchorage east of the Water Works pier. The membership list is growing rapidly, and the club starts with every prospect of success.

Isolene, steam yacht, J. H. Flagler, was burned and sunk last spring in Northport Harbor, the wreck being neglected ever since, pending an adjustment of the insurance; the engines and a nearly new boiler meanwhile being ruined by rust. The insurance companies have recently taken possession of the wreck and will sell it to be broken up.

At Oakville, Ont., Mr. Andrews, the builder, has a 42ft. l.w.l. cutter on the stocks for a Toronto yachtsman.

The trouble between the Hempstead Harbor Y. C. and its neighbors, Mrs. and Miss McKenzie, has been again brought before the courts, a committee of the club appealing to the authorities of Long Island City for protection from the younger woman, who, it is claimed, is in the habit of firing at members as they pass to and from the club house at Glen Cove.

The order for a steel steam yacht for a New York owner, from designs by H. J. Gielow, has been placed with the Pusey & Jones Co., of Wilmington. The yacht will be 140ft. over all, 115ft. l. w.l., 17ft. beam and 6ft. 3in. draft, with four watertight bulkheads and schooner rig. The engines will be triple expansion, four cylinders with a watertube boiler, the guaranteed speed being 20 miles under forced draft and 18 miles under natural draft.

The present season has been a prosperous one with the Corinthian Y. C. of Atlantic City. During the year $325 has been paid on the house debt, leaving but $100, the sole indebtedness of the club. The dues are but $2 per year, and the club is active in the promotion of racing. The annual meeting was held on Nov. 14, being very well attended. The following officers were elected; Com., W. W. Hollingsworth, M D.; Vice-Com., Fred P. Currie; Fleet Captain, Lem Wootton; Fleet Surgeon, Talbot Reed, M.D.; Meas., John T. Andrews; Sec'y, Chester Adams; Treas., Leonard Alger; Trustees—E. S. Reed, Geo. S. Gandy, Harry B. Leeds, Fred P. Currie, David Barrett; Regatta Committee—David C. Andrews, chairman; Geo. Gale, Leonard Alger, Chester Adams, John T. Andrews; Lines, Models and Exhibits Committee—C. Sumner Reed, chairman; Geo. Gale, Wm. Maupay, Jr.; House Committee—D. C Andrews, chairman; Wm. H. Edwards, Wm. Pfaff; Lectures and Entertainments Committee—Wm. S. Westcott, chairman; John E. Mehrer, Jr., Wm. Cochran. The new commodore, Dr. Hollingsworth, has served the club very faithfully as secretary, and has done much toward its present prosperity.

Capt. Howard Patterson has reopened his institution, the New York Nautical College, at 130 Water street, with regular courses of instruction for yachtsmen, members of the Naval Reserve, yacht sailing masters, merchant captains and mates, and others interested in navigation. Capt. Patterson has had as pupils many of the foremost New York yachtsmen.

# Canoeing.

## New York C. C.

THE past year has been one of trial and tribulation for the New York C. C., the damage to its house and fleet having crippled it financially in spite of the loyal support of its members, and further placing it at a serious disadvantage as regards this season's work afloat. What is specially discouraging is the convincing proof afforded by the first disaster, and another less serious in its results that a floating house is not possible on Gravesend Bay. The officers of the club have worked most indefatigably all this season, and are even now busy with new plans to keep the club together and to preserve that *esprit du corps* which has been its mainstay in all of its troubles, and have just issued the following notice:

PASTE THIS IN YOUR HAT.

It has been thought best to keep the members of the N. Y. C. C. together this winter for the purpose of getting at some practical solution of the problem of a shore house. To facilitate this your committee have arranged to meet at lunch every Thursday at 12:30 P. M. at Powers's restaurant, 52 Cedar street, a comfortable, quiet and reasonable place. You are expected to show up as often as possible. No treating, and every man for himself.

MARMALADE LODGE AND FENCING ROOM DINNERS REVIVED.

Years ago the N. Y. C. C. had a lodge at Stephens's boat house on Staten Island. The old members are never tired of talking and expatiating on the good times held there, and the undersigned, in the hope of reviving these good times and bringing the canoeists of this vicinity together, have arranged to have the club house opened and warmed every Sunday. Hot coffee, etc., will be served, and the time spent in rigging, yarning and a general discussion of plans and schemes relating to a proposed shore house for the club. The boat house is in the Atlantic Yacht Club basin, foot of Fifty-fifth street, South Brooklyn, reached via Thirty-ninth street ferry and Second avenue trolley, or by Bridge and Fifth avenue "L" to Fifty-second street.

It is proposed later to give dinners and have practical talks on matters which will interest all canoeists. We ask you to heartily co-operate with us. Bring your pipe, have some old clothes in your locker and get down there as often as possible. Buttonhole your friends among the canoemen. Bring them or tell them to come down. All canoeists are welcome; the more the merrier. Yours sincerely, SOME OF US.

## A Panacea.

*Editor Forest and Stream:*

Am I glad that I am not on the A. C. A. regatta committee? Well, rather! I only hope that the man who proposed handicapping, an inanimate bit of matter, is on the committee. What a nervous strain it will be on the poor handicapped canoe to strive and keep ahead of the scratch boats, and how tired the scratch canoes will be endeavoring to cut down huge slices of handicap. How nicely it could all have been settled by classifying the men according to their known merits. What possible basis is there for handicapping an outfit, when any really good boat, one that any one can own, when lines are so well known as they are to-day, can be sailed to the utmost advantage by a novice? Does any well-informed person doubt that a Paul Butler in an indifferent canoe can tie clove hitches around me in the best canoe that floats three times in every mile and then be out of sight at the finish? I think not. No regatta committee that ever served a term can handicap a fleet with good, bad and indifferent boats and sailors throughout its number.

Handicapping the knockabout class of small yachts at Marblehead has been indulged in, but no one in his right mind claims it to have been really satisfactory. Starting all together and calculating the handicap at the end leaves things in just as bad a way, as the bad sailors hamper the good ones.

Under the class system such as I have advocated in these columns before, it would be a case of Greek and Greek and fine racing would result. A lower class man would have an ambition to shine in a higher class and would work to that end. Under a handicap system no true sportsman would be entirely satisfied with beating a man who had given him a start to begin with, or who, having beaten him, must lose the race because his "crack" has a gift of time or distance. If, however, he beats men of his own class and thus gains admission to the company of better men, he will or should be proud of the distinction.

The feeling that if one cannot beat another fairly and squarely he can steal another's laurels by virtue of a handicap must ever be a mean one. If I win from a man by real merit I can slap my breast and proudly say, "I beat him." But no self-respecting canoeist (above all others) can say with pride, "He beat me, but I took the prize because he gave me something to help me out of the hole from which I could not climb without assistance." Away with such miserable makeshifts to take the place of real merit and rob it of its glory.

Has canoeing degenerated that men cannot race without such a towline? Not much. Let them handicap for a year and thus kill such a nocuous practice. Rather toll the death knell of racing than have it supported a living corpse on tottering legs. ILEX.

BOSTON, Dec. 6.

*Editor Forest and Stream:*

The following suggestions are offered for what they may be worth, in hopes that others may be induced to criticise them and thus bring out something that may aid the committee:

As to limiting sail area or even making it the basis for handicapping, I believe it to be not only unfair but wholly wrong. To bring the matter home, take two boats in my own club. One of them is purely a racer, while the other is a compromise, and a very seaworthy, powerful canoe, there being about 60lbs. difference in weight. They have been repeatedly sailed together and all results carefully noted. With the same amount of canvas, cut and rigged exactly the same, the lighter canoe invariably wins; but by increasing the sail area of the heavier canoe by 25ft., the tables are completely turned. In heavy weather we have found that, while it was utterly impossible to do anything with the lighter canoe with 100ft. of canvas, the other would easily carry 165ft. The canoes have each several sets of sails, and are exactly alike.

Now, would it be at all fair to use sail area as the basis for handicapping these two canoes? Would it not effectually bar the heavier canoe except in unusually heavy weather? You might take a canoe as a start, weigh it, and say this canoe of such a weight shall be allowed so much canvas; all others shall be allowed to add one square foot of canvas for each pound in excess, and must reduce by one square foot for each pound less.

I have been trying to think up some scheme to revive the entry list in our home races, but I must confess it is yet beyond me. I think the definition of a cruiser is wrong, and that by letting in some of the other canoes we might make the race for cruisers a very interesting one and fill a large entry list. The days of a cruiser who sleeps in his canoe have gone, and a 6ft. well, 5ft. in the clear, is hard to find in a modern sailing canoe.

The old style cruisers were very nice to use in perfectly smooth water, but when it gets even a little bit rough you must go ashore or else get everything you own soaking wet and be uncomfortable for the balance of the cruise.

My idea of a cruiser is a canoe with plenty of dry stowage, and one that can stay at sea when it is rough. Not one with an open cockpit and that must lay up on the slightest indication of rough water. Why not make a race obliging each canoe to carry a certain weight or bulk? Make each man strike his tent, pack it into his canoe together with a certain weight of sand bags, sail to windward around a stakeboat and return, the tents to be struck at the gun signal and the time to include all preparation. The taking of the tents aboard would, I think, effectually bar the canoes that have no cockpits. Of course tent poles must go with the tents, and the tents must be fit to use in cruising.

I have figured out an idea for a time handicap, but I am afraid it would be rather complicated and saddle considerable work on the regatta committee. I should suggest as follows: Let the first race called be the unlimited. All who do not enter this race must start as scratch men in the first race they do enter. Let the time of each man be taken and used as the basis for figuring the handicap. The penalty for withdrawal or disablement in any race shall be to place such canoe at scratch in the next race entered. Let the difference in time in each race between the first canoe to finish and each other be divided by 2 and deducted from the times in the next race. For instance, A, B, C and D start in the first race and finish as follows: A, 45m.; B, 48m.; C, 50m.; D, 58m.

SECOND RACE.

| | Actual. | Corrected. |
|---|---|---|
| A | 47 less 0 | 47 |
| B | 50 less 1½ | 48½ |
| C | 51 less 2½ | 48½ |
| D | 56 less 6½ | 49½ |

THIRD RACE.

| | | |
|---|---|---|
| A | 49 less 0 | 49 |
| B | 52 less 1½ | 50½ |
| C | 51 less 2 | 49 |
| D | 53 less 4½ | 48½ |

In this way, by allowing a canoe half her difference in each race, I think things might be equalized to some extent. I do not believe it would be policy to allow a canoe all her difference, as it would tend to put a premium on jockeying for a certain race. I would also advise that no canoe be allowed more than a certain amount of time in any race. X.

## CANOE NEWS NOTES.

The camp-fire of the British Canoe Association was announced for Dec. 8 at Newcastle-on-Tyne, the dinner, at 6 P. M., being given by the Northern C. C., followed by a "sing-song." The business meeting, to determine the site of the 1895 meet, takes place at 3 P. M.

The annual meeting and dinner of the Puritan C. C. of Boston will be held at Young's Hotel, Boston, on Saturday, Jan. 5.

# Rifle Range and Gallery.

## New York Schuetzen Corps.

NEW YORK, Dec. 7.—The New York Schuetzen Corps, Capt. Henry Offerman, held its second bi-monthly gallery practice and team shoot on the Zettler Bros. ranges this evening. There was a large gathering of the members present and much interest developed in the competition. In the team matches Capt. Offerman's team was again unfortunate in its efforts to outshoot Capt. Tholke's team. The latter team won both matches with ease Scores:

First Match.

| | | | |
|---|---|---|---|
| Tholke, Captain | 225 | Offerman, Captain | 228 |
| Feigel | 237 | Zettler | 231 |
| Grosch | 234 | Christian | 236 |
| Bonn | 238 | Bradley | 225 |
| Facompre | 231 | Borestein | 211 |
| Kuhlman | 208 | Berle | 223 |
| Kumsieck | 201 | Galle | 222 |
| Decker | 204 | Nordbrock | 204 |
| Strate | 233 | Mann | 178 |
| J Klee | 230 | Hoops | 193 |
| Hermann | 220 | C Offerman | 226 |
| Bundervold | 226 | H Meyer | 218 |
| Schmidt | 239 | Lohden | 222 |
| Wehrenberg | 213—3348 | Gobber | 209 |
| | | Giebelhaus | 223—3249 |

Second Match.

| | | | |
|---|---|---|---|
| Tholke, Captain | 225 | Offerman, Captain | 197 |
| Feigel | 237 | Zettler | 233 |
| Christian | 241 | Bonn | 238 |

## The Little Hatchets.

ALTON, Ill., Dec. 1.—Kindly note the organization of the Little Hatchet Rifle Club, of Howard, Ohio. Mr. W. M. Reese, of Cleveland, C. L; E. P. Critchfield, Howard, O., 1st Asst. C. L.; H. R. Wills, Alton, Ill., 2d Asst. C. L. The club goes into practice at once, but in its present scattered condition the work will have to be done in various parts of the country; but all the same it is the intention of each and every one to attain a high standard in rifle shooting, and as a club to be able to hold its own against all comers next season of out door shooting. Mr. Critchfield is now famous in his own State as a crack shot. The organization will be maintained at Howard, O., the headquarters heretofore of all who belong to the club lately formed, for both rifle practice and wing shooting. H. R. WILLS.

## Greenville Rifle Club.

GREENVILLE, N. J., Dec. 7.—Eighteen members of the Greenville Rifle Club participated in the weekly competition this evening for class prizes. The present series will end next week. The competition has been close and a matter of much interest to the competing members. The club will elect a new board of officers on Dec. 10. In the competition this evening the following appended scores were made: First Class—M. Dorrier 246, Geo. Purkess 244, J. Boag 239, G W. Plaisted 238, W. C. Collins 244, C. Scheeline 237, C. Boag 235. Second Class—Agneau 232, Chavant 241, Chase 223, Charlock 230, Spahn 223, Gotthardt 229, Fagen 233. Third Class—Hill 216, Graef 226, Renker 232, E. Wuestner, Sr., 200.

## AMATEUR REVOLVER CHAMPIONSHIP.

WALTER WINANS.

ROUNDSMAN W. E. PETTY, of the Twenty-first Precinct, New York city, having won by default his match with Bernard Walther Dec. 3, is now in possession of the Winans trophy for the Amateur Revolver Championship of the United States. Mr. Petty held the trophy for two years against all comers, and defeated such marksmen as George E. Jantzer, B. Walther, A. G. Heintz and Dr. Samuel J. Fort. He is undoubtedly one of the best living revolver shots and some of his scores have never been surpassed.

---

Thus ends the history of the first and only amateur revolver championship in this country. Mr. Petty has fairly won his title to the trophy, and deserves his success. He has done the best average shooting of any competitor, and has the best score to his credit for a string of 18 shots. He has shot under unfavorable conditions in several of the competitions, at one time suffering from weak eyes resulting from an attack of measles, and at another from a sprained shoulder received in the performance of his duty. His scores in competition naturally have not equaled those shot at other times under more favorable circumstances. It is not to be inferred, however, that he is not a good match shooter. The fact is that competitive shooting is one of Mr. Petty's strongest points. The greater the odds against him the more creditable is his shoot ng, relative of course to the odds. His shooting may have fallen off 50 per cent. just previous to a match owing to causes not within his control, but it has been proved folly on more than one occasion to imagine on that account that when the match comes off he will not shoot at the top notch. Mr. Petty is never ready to believe himself a victim of circumstances, and an accident that would lay up another man seems to give him just the tonic needed to put up a good stiff article in the line of marksmanship.

It is, therefore, both with pleasure and a gratified sense of the justice of the award that FOREST AND STREAM has finally turned over the Trophy to Mr. Petty to be his in perpetuity. It has become the property of a man who thoroughly deserved it; and, we have no hesitation in saying it, the man of all others in this country *best* deserving to receive it. There may be better revolver shots, but if there are, they are too retiring by nature to warrant any claim to the championship. They have not put themselves in evidence, and we do not believe any such exist. Champion Petty has always been more than willing to meet a challenger, and if there is any one who imagines himself a better shot and has not had a try at him, he has only himself to blame.

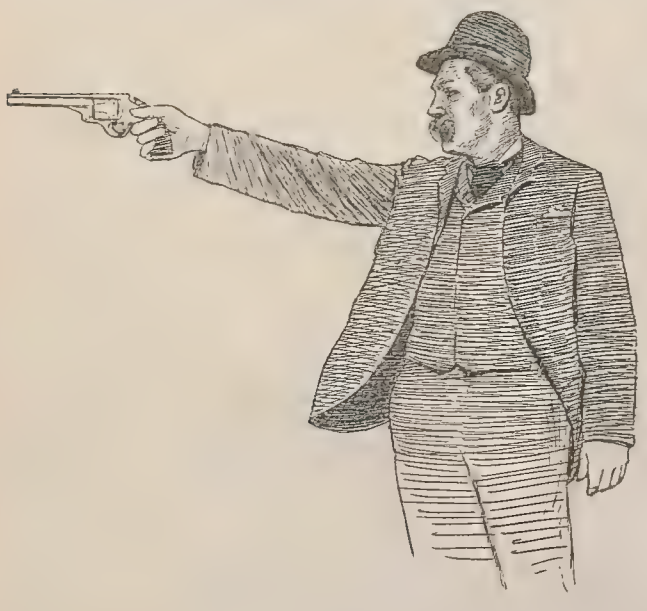
DR. LOUIS BELL.

First Winner of the Trophy.

### The Winans Trophy

is a silvered bronze statuette of a mounted Texas cowboy, one-eighth life size. He has been "painting the town red," and gotten into a dispute with some one and is pointing his frontier Colt at him (represented by the spectator), while he calls out, "Bail up!"

By the angle at which he points the Colt is shown that the man he is "bailing up" is on foot, his hold of the revolver is that adopted by the late Chevalier Ira Paine and taught by him to Mr. Walter Winans.



The cowboy is sitting with the typical cowboy seat, straight legs and one hand resting on the pommel of his Moseman's frontier saddle in the favorite cowboy style. The old broncho pony he is riding is also a typical cowboy pony, narrow, big-headed, sleepy-looking, and yet looking in hard condition.

The armlets above the cowboy's elbows and the ornamental bridle show that he has lived among Indians.

The base of ebony has its ornaments made of parts of frontier .44-cal. revolver cartridges, the bullets lying in the fluting, and the heads of the cartridges forming a border near the bottom; the top beading of rope pattern represents the lariat.

The trophy is the gift of its designer, Walter Winans, an American residing in England who has swept everything before him in revolver competitions in that country, since Wimbledon was opened to others than English army officers in 1889. It was natural for such an enthusiastic and successful revolver shot to wish to see his favorite pastime popularized among his countrymen, and it was no surprise to FOREST AND STREAM therefore, when Mr. Winans opened correspondence with regard to an American championship. While American revolvers lead the world for accuracy and efficiency, it is a fact up to three years ago no recognized championship had ever been held here, and that there was no recognized system as to distances, etc.

FOREST AND STREAM believing that the time was ripe for such a competition, indorsed Mr. Winans's proposition and assumed the practical work of management with all the labor and expense entailed. It added a purse of $100, to be divided among the first four shooters in the preliminary competitions, and Messrs. Smith & Wesson also gave a magnificent revolver to go to the winner.

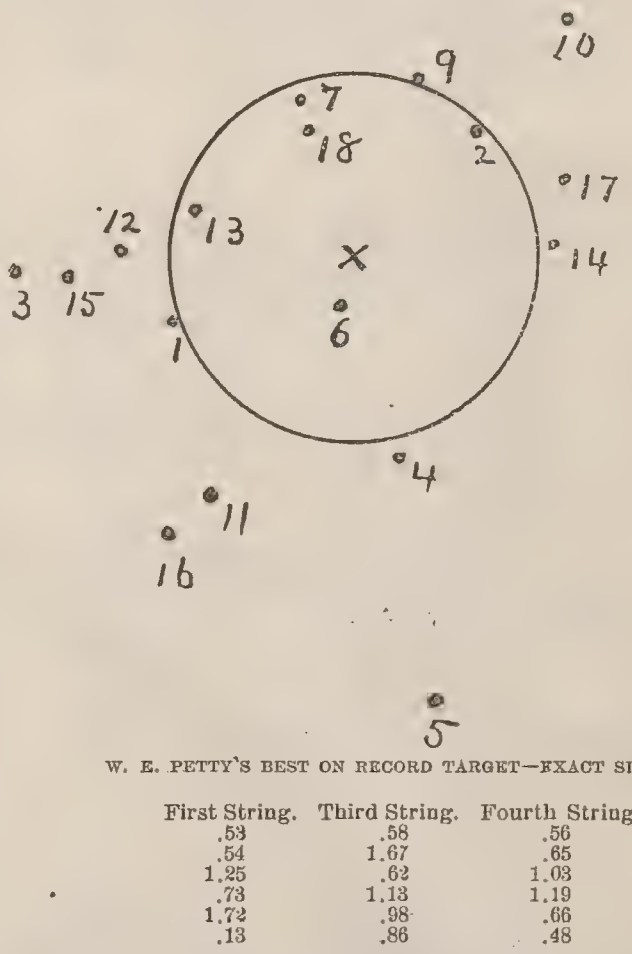
CHAMPION PETTY'S STYLE.

Particulars of the matches were sent broadcast to all pistol and revolver clubs, and advertised through the columns of FOREST AND STREAM, and wherever there was any interest shown arrangements were at once made for conducting competitions.

The terms of the competition permitted any revolver whose maximum length of bore, including cylinder, did not exceed 10in. Any trigger pull was permitted and any sights, provided both were forward of the grip of the pistol hand. The use of any fixed ammunition was permitted. The distance was 20yds., and the scores were the best three strings of six shots each, selected from five 6-shot strings, and reckoned by string measurement. The five strings were fired successively, cleaning being permitted only between each string.

The targets, which were provided by FOREST AND STREAM, were ready measurement disks, a separate one of which was given for each shot. Shots were measured by means of a mechanical vernier scale from the center of disk to center of shot hole.

Matches were held under the direct management of this paper in Boston, New York, Philadelphia, Chicago, St. Louis, etc., and as a result of the preliminary competition Dr. Louis Bell, of the *Electrical World*, New York, won the trophy from forty competitors, representing the picked revolver shooters of the country. His winning score was 17.52 string measurement for 18 shots. H. S. Burley, of Chicago, was second; Geo. E. Jantzer, of New York, third, and Sumner Paine, of Boston, fourth.



W. E. PETTY.

Winner of the Winans Trophy.

The result was announced early in 1892. On Aug. 3 that year, Dr. Bell met his first challenger in the person of Geo. E. Jantzer, who after a close contest won the trophy. Mr. Jantzer held the trophy from that date till Dec. 3, having in the meanwhile defeated his first challenger, Henry Oehl, president of the New York Pistol and Revolver Club. On Dec. 3, however, he succumbed to his second challenger, Wm. E. Petty, in the best match of the series. Mr. Petty's score, which is reproduced, is still the record for this kind of shooting in competition. At 60ft. it will be seen that his average for eighteen shots was only 85-100in. from a dead center.

Mr. Petty met his first challenger, Bernard Walther, on the night of Feb. 4, 1893, and defeated him by a close score. Since then he has defeated A. G. Heintz of Newark and Dr. Samuel J. Fort of Ellicott City, Md.

Mr. Petty has been a lover of revolver shooting since boyhood, and many remarkably good stories of his early shooting have been told.

W. E. PETTY'S BEST ON RECORD TARGET—EXACT SIZE.

| First String. | Third String. | Fourth String. |
|---|---|---|
| .53 | .58 | .56 |
| .54 | 1.67 | .65 |
| 1.25 | .62 | 1.03 |
| .73 | 1.13 | 1.19 |
| 1.72 | .98 | .66 |
| .13 | .86 | .48 |
| **4.90** | **5.84** | **4.57** |

Record strings, **4.90, 5.84, 4.57.** Total, **15.31in.**

He is a uniformly consistent performer and never disappoints his friends. Besides winning the Winans trophy he holds revolver records for six and ten shots at 20yds., the former by a score of 60 out of 60 and the latter by 99 out of a possible 100 on the standard American target. This latter he has duplicated.

In person Mr. Petty is a finely-formed man standing 5ft. 10in. and weighing 225lbs. He is a blond with sandy hair and mustache and the characteristic blue eye of the born marksman. He is popular among all who know him for his gentlemanly characteristics, and is one of the best-natured men under average conditions that ever was. He has a quick temper, however, and his great strength has more than once been used to impress upon some dastardly scoundrel who had roused him the error of his ways. Born in New York thirty-eight years ago, he has been on the police force of this city ten years. Two of his uncles were police captains. He comes of an old Long Island family who have served their country in all her wars, and he wears with pride the badge of the Sons of the American Revolution, of which society he is a member.

---

### Schlicht Rifle Club.

WEST NEW YORK, N. J., Dec. 3.—The past week has been a busy one for the members of the Schlicht Club. On Wednesday night the club held a shoot at headquarters, in which the members vied with each other as to who should have the first choice in a lot of fine turkeys, geese, ducks and chickens. The conditions called for three shots per entry on the German ring target, the highest score to take first choice, etc. Geo. Lautenberger outshot all his competitors and carried off the big gobbler: G. Lautenberger 73, F. Krobatsch 73, G. Dorr 73, A. Meyer 73, C. Meyer 73, W. Schlicht 72, J. Diehl 72, C. Schlicht 71, H. Aufderheide 71, G. Tribout 70.

On Friday night the club brought the bullseye shoot to a close. This shoot was for a series of prizes ranging from $10 down to 50 cents, for the best center shot, also five premiums for the most bullseyes ranging from $5 to $1. Chas. Meyer got the first premium for most bulls (49) and Jacob Diehl the first prize for the best center shot. The scores: Jacob Diehl 5 degrees, George Schlicht 6½, Charles Meyer 13, Conrad Schlicht 18, George Reichert 19, Capt. Reichert 19, Capt. Dedrick 22½, Aug. Meyer 22½, George Dorr 29, William Schlicht 33, Gus. Tribout 46, Fred. Lambrix 49.

For the most bullseyes: Charley Meyer 49, J. cob Diehl 46, George Schlicht 44, George Reichert 21, George Dorr 18.

Monday night, Dec. 3, the club held its weekly gallery shoot for he class medals. The scores: Peter Mau 220, Charley Meyer 233, George Schlicht 241, George Dorr 235, Jacob Schlicht 229, Aug. Tribout 215, Fred. Lambrix 221, George Reichert 235 H. Aufder Heide 229, Conrad Schlicht 217, Andrew Daublin 205, William Schlicht 235, Jacob Diehl 234, Aug. Meyer 238.

Medal winners: George Schlicht, champion medal, 241; Aug. Meyer, first class, 238; George Reichert, second class, 238; Charley Meyer, third class, 233.

---

## RIFLE NOTES.

The Zettler Rifle Club held its annual meeting and election of officers on Dec. 4. The old board was re-elected, as follows: B. Walther, President; Geo. Krause, Vice-President; Gus Nowak, Secretary; F. C. Ross, Corresponding Secretary; C. G. Zettler, Treasurer; B. Zettler, Shooting Master.

At the annual meeting of the New York Rifle Club, held in the Zettler Bros.' headquarters on Thursday night, the club decided to have weekly practice shooting on these ranges.

The Lady Miller Club, of Hoboken, N. J., is developing some very good shots among its members. At the weekly shoot on Dec. 3 one of the ladies made within one point of the possible score. Appended will be found the scores of the markswomen made on this occasion: Miss Mamie Miller 226, Mrs. Meyns 224, Mrs. Wilson 220, Miss Sanders 215, Miss Yourmanns 213, Miss Ungel 212, Miss Alice Kloepping 216, Mrs. Miller 216, Miss Jessie Wilson 205, Mrs. Stadler 212, and Mrs. Ahrent 210. In the competition for a special prize donated by Mrs. Meyns the winner was Mrs. Stadler, who made the splendid score of 74 out of a possible 75 points.

The Our Own Rifle Club, of Hoboken, and the Greenville Club, of Greenville, will shoot a ten men team match on the Greenville Club ranges, on Jan. 9.

A committee from the Portchester Rifle Club, visited New York last week with the view of getting the latest improvments in galleries. This club has in contemplation the building of a long range (200yds.) shooting house in which will be combined bowling alleys and a gallery range (75ft.).

It was our pleasure to spend a half hour with the members of the Elite Schuetzen Corps one evening last week; we found the membership of this latest addition to New York's fraternity of rifle associations to be all that its name signifies.

Mr. Dorrler and G. W. Plaisted will hold a little argument in the Greenville Park shooting house, on Saturday of this week in the form of a 50-shot match. The latter has been trying to worry Michael with the following scores shot in practice last week:

Dec. 5.....221 218 219 210 225—1093
Dec. 8.....226 211 216 217 221—1091

Michael says practice shooting and match shooting are two features in rifle shooting that sometimes plays "Hobb" with one's egotism.

MR. WINANS'S POSITION.

From a photograph.

Our riflemen who have a desire for nitro are waiting patiently for the new U. M. C. primer (2½) for nitro powder. The soft copper metal in the primer now on the market does not give satisfaction. The heavy chamber pressure drives the copper back into the lock of the rifle, resulting in excessive corrosion of the metal around the firing-pin as well as extreme foulness in and about the breech-block and lock action. We have in mind a rifle which has been used for some months with nitro, and the result is a corrosion around the firing-pin that has reached a size corresponding to the diameter of the 2½ primer. It is only a question of time when the depth of the corrosion will be sufficient to enable the owner to reverse the order of things and seat the primer in the face of the lock instead of in the shell. Now the question is: What causes this excessive corrosion? Is it the composition of the powder or primer? Or the excessive pressure with a sand blast action upon the surrounding metal? Do the shotgun shooters have the same experience with the nitro in the shotgun? We are of the opinion that they do not from the fact that the pressure is not as excessive and the breech action of the shotgun is more easily kept clean.

---

### Invited to Make a Score.

WESTFIELD, Mass., Dec. 5.—Col. J. A. Lakin, of this place, who recently won the State gold medal for sharp-shooting at four rings, as required by the regulation of the Mass. V. M., is to be presented soon with a numerously signed petition from his many friends in the neighborhood to shoot for a special gold medal, with the regulation revolver, 4 strings of 5 each, and to make 23 or better in each string, out of a possible 25, at 50yds., standing erect without any artificial support or rest; the same to be shot under the supervision of Lieut. Bull, Inspector of Rifle Practice, 20th Regt. M. V. M. It requests him to name day and place for the exhibition. It is probable that the trial will be held in Springfield, some time near the first of January next. Col. Lakin is having built to order a specially made Colts revolver for this event, and the same is looked forward to with much interest by all interested.

W. E. PETTY—99 OUT OF 100.

### Zettler Rifle Club.

NEW YORK, Dec. 4.—The members of the Zettler Club met in the headquarters this evening to participate in the competition for the champion medal and other prizes on the winter programme. It was also the regular monthly meeting night.

There was much interest centered in the contest for high scores between the four experts Flach, Ross, Holges and Dorrler who are having a nip and tuck race at each weekly shoot for the first position. In the competition this evening there was a repetition of the same struggle that has been going on since the opening night. Up to last week Dorrler had rather the best of his competitors, but Louis Flach struck one of his shooting streaks on that occasion, capturing the champion medal, as well as pressing Dorrler hard for the highest total for the best five scores, making 1,230 against 1,231 for Dorrler. In the competition this evening Flach again demonstrated his ability to put up high scores, making 248 on his entry for the champion medal and a total of 1,232 for his five scores. Dorrler was in close persuit, making 246 for the medal and a total of 1,227 for his five scores. Holges tied Dorrler for the medal making 247. F. C. Ross has been out of form for the past two weeks or more and has fallen somewhat behind. The race however is a long one and before the goal is reached there are many opportunities for unexpected changes in the relative position of the four competing marksmen. Scores:

Champion medal: L. Flach 248, H. Holges 246, M. Dorrler 245, F.C. Ross 244, C. G. Zettler 243 M. B. Engel 245, C.W. Plaisted 240, B. Zettler Dr. Grosch 241, H. D. Muller 240, R. Busse 239, Gus Nowak 236, H. Munz 230, G. W. Downs 233, J. Blumenborg 235. A. Klein 231, S. Buzzini 232.

Five best targets:

| | | | | | |
|---|---|---|---|---|---|
| L Flach | 248 | 249 | 244 | 244 | 247—1232 |
| M Dorrler | 246 | 245 | 244 | 244 | 248—1227 |
| H Holges | 246 | 244 | 246 | 233 | 246—1225 |
| F C Ross | 244 | 242 | 242 | 243 | 248—1219 |

Best 10 shot score: L. Flach 249, M. Dorrler 248, F. C. Ross 248, H. Holges 246, B Zettler 247, M. B. Engel 245, R. Busse 246, C. G. Zettler 244, Gus Nowak 243, H. D. Muller 245. G. W. Plaisted 240, Dr. Grosch 241, G. W. Downs 238, A. Klein 236, J. Blumenberg 235, H. Munz 233, S. Buzzini 243.

### San Francisco Rifles and Pistols.

SAN FRANCISCO.—The Schuetzen clubs are rather quiescent at present, though the various clubs that shoot at Shell Monnd Range are thinking of getting up a testimonial shoot in honor of Capt. Siebe, the popular proprietor of the range.

A majority of the members of the Columbia Club are convinced that though the Standard American target is perfection for pistol work, it is not so good a measure of rifle work at 200yds. off-hand. Hence there is much talk of adopting the 25-ring target next year for all official scoring.

ROEEL.

## Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

### FIXTURES.

Dec. 12.—RIVERTON, Pa.—Riverton Gun Club versus New Utrecht Gun Club, 10 men team race.

Dec. 13.—MORRISTOWN, N. J.—Handicap at 15 live birds, $15 entrance, handicap 26-33yds., class shooting, $25 added to the two high guns.

Dec. 20-21.—ELIZABETH, N. J.—Two days' shoot of the Elizabeth Gun Club; first day, targets; second day, live birds.

1895.

Jan. 1.—NEWARK, N. J.—Fifteenth annual New Year's Day tournament of the South Side Gun Club. W. R. Hobart, Sec'y.

Jan. 1.—TOWANDA, Pa.—New Year's tournament of the Towanda Rod and Gun Club; live birds and targets. W. F. Dittrich, Sec'y.

Jan. 15-17.—HAMILTON, Canada.—Hamilton Gun Club's annual tournament; $1,000 added money. J. W. Bowman, Sec'y.

Feb. 22.—ALBANY, N. Y.—First tournament of the Eastern New York Trap-Shooters' League, of the series of 1895, under the auspices of the West End Gun Club. Henry A. Kratz, Sec'y.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York; $1,000 guaranteed, all surplus added.

May 8-10.—WEIR CITY, Kas.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $200 in cash added. W. W. McIlhany, Sec'y.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30.—CANOJOHARIE, N. Y.—Two-day's tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 30.—CANAJOHARIE, N. Y.—Eastern New York League tournament, under the direction of the Canajoharie Rod and Gun Club; kingbird targets, expert traps. Chas. Weeks, Sec'y.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec'y.

June 4-7.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament. under the auspices of the Keystone Shooting League of Philadelphia, John C. Shallcross, Sec'y, Frankford, Pa.

## CONTROL OF TRAP-SHOOTING.

FROM the tone of the letters given in full below, it will be seen at a glance that FOREST AND STREAM'S scheme for the control of trap-shooting is rapidly growing in favor. As a matter of fact it could not fail of finding a response in the heart of every true and honest sportsman.

When such men as T. A. Divine, president of the Memphis, Tenn., Gun Club; his fellow member, Irby Bennett; Jack Parker, of Des Chree-Shos-Ka; and Paul North, put their pen to paper and back up FOREST AND STREAM, there should be but little doubt in the mind of any waverer as to the possible outcome of this agitation. The people are with us; that is, of course, the men who shoot for the love of the sport, and not for the money that is in it. As for that other class we don't want them at any price.

Although Mr. North sees some trouble and difficulty ahead for a National Association of the trap-shooters of America, he admits that something must be done. No doubt when the Great Wall of China was first promoted there were many who doubted the feasibility of its construction. But the wall was built and is still in evidence.

And it is just such another wall which, with the aid of Mr. North and his friends, FOREST AND STREAM proposes to build around our trap-shooting tournaments, allowing none but those who are fit and proper persons, that is, fair and square sportsmen, to participate in the various events and to enjoy, as Mr. Divine puts it, "the social reunion and the spirit of fun and pleasure there is to be gotten out of a meeting of this kind."

Dropping for place must go.

### Paul North's Suggestions.

CLEVELAND, O., Dec. 1.—*Editor Forest and Stream:* My views on your scheme for preventing crookedness in trap-shooting, as outlined in your editorial in issue of Dec. 1, are that you might have asked something harder, but I doubt it. That the evil of dropping for place is a menace to the sport of trap-shooting will be acknowledged by all; but how to remedy it is a question that is hard to solve.

The great difficulty seems to be that the practice has become so general that it is almost looked upon as a part of the game; and like intemperance, it is a hard matter to eradicate it by legislation. The better way, perhaps, would be to agitate it, as you are so ably doing, and create so strong a sentiment against it that but few, if any, would

c

are to make a practice of doing that which was so generally condemned. National associations of trap-shooters, for other purposes, have been tried so many times, with such poor success, that it hardly seems possible to form one on the basis proposed by you that could handle the matter successfully. While associations for protecting the interests of other sports are successful, they are so only because the conditions governing their contests are so entirely different. In my opinion they would be helpless if they had a similar state of affairs to handle that a trap-shooters' association would have.

Trap-shooting is the only amateur sport in which money prizes are allowable, and the fact that the prizes are so given that it is possible at times to make more money by shooting poorly than by shooting well, and because it is so difficult to justly determine at all times whether the dropping was intentional or accidental, makes the handling of the subject by an association almost an impossibility.

While with all other sports there are comparatively few meetings, and at all of these meetings the prizes go to the best man, and their contests are of such a nature that there can be no "ties" and therefore no incentive to do anything but one's very best, with trap shooting there are thousands of meetings every year, the prizes are money prizes, the nature of the sport or rather the system of dividing the money (class system), is such that there are many "ties" in each class or division of the purse, and consequently many opportunities of making more money by poor shooting than by good shooting.

The whole trouble lies in the system of dividing the purses, and of course would be entirely eradicated if the "straight" or "high-gun" system was used; but as this system gives the poor shot no chance at all, it is out of the question.

The system of paying each contestant a certain sum for a certain score, as tried by John Parker, last year, stops the practice, but in my opinion cannot be generally used, for the reason that unless the shooting is made extremely difficult the management would soon be bankrupt; and if it is made too difficult the contestants will suffer the same fate. It is almost an impossibility to strike a fair medium.

Believing that the class system of shooting is the only one that will call out many shooters, and that no association, national or local, could handle the subject so as to give any great amount of relief, I offer the following as my idea of a partial remedy and one that would gradually have a tendency to make dropping for place so unpopular as to be indulged in by but few if any.

The principal excuse offered for dropping is that "if I don't some one else will," or "They cut my throat last time, and I will get even when I get a chance."

Now, suppose if at the commencement of a tournament one-half or more of the shooters present would declare that under no circumstances would they purposely miss a bird, and would make the declaration binding by signing a paper to that effect, I believe the result would be that all would make the same agreement. They might go further, and say that unless the management refused to allow such shooters as they would point out as having dropped for place, to compete in any more of the events, they would withdraw in a body. This would have as great if not greater moral effect than an association such as you propose, and at the same time be immediately effective. It would be to a certain extent a "local option" association, and prove effective where the sentiment in favor of honest shooting is strong enough to enforce its rules.

I also believe that the handicap proposed by myself, and which will be known as the "bluerock handicap," and used at the Chamberlin tournament next year, will prevent the practice in a great measure. This handicap compels winners of first, second or third money in one event to shoot into those moneys in the following event or be out of a place. Failing to get a place in the next event, they can compete for all the moneys in the next event. This will compel shooters to do their best, and stop "dropping" to a large extent.

I hope your agitation of the subject will lead to good results.

PAUL NORTH.

### Just What We Expected.

MEMPHIS, TENN., Dec 8.—*Editor Forest and Stream:* I have read carefully the editorial in the great sportsman's paper, FOREST AND STREAM, in relation to crookedness at trap-shooting, and your scheme for preventing the same.

I agree with you in regard to the necessity for a National Association, and speaking for the Memphis Gun Club, I will say that we are willing with other clubs to meet at some central point, for the purpose of organizing such an association.

This association, as you say, could invite all other clubs in good standing to join them, could elect or appoint a board of control, with whom all complaints could be filed, and whose action would be final.

My idea is that each club belonging to this National Association should elect or appoint three of their members to act as a sub-board of control, who would have a right to bar from their grounds any shooter guilty of ungentlemanly conduct, and this action on their part would bar the party from all other club grounds of the association until the case could be acted on by the governing board of the National Association.

Our idea in holding tournaments is to conduct them on a high plane of merit, to make the meeting a social reunion of gentlemen, who love the sport, who are willing to shoot with each other for the pleasure it gives and not for the money there may be in it, by dropping for place or pooling for advantage. We are opposed to a tournament on the basis established by a great many men, who make it a gambling place to pool together and stack the cards, as it were; therefore, we intend having a committee of three, who will have the courage to protect the gentlemen shooters who come to our tournament, for it is a well-known fact that the higher bred a sportsman is, the more timid and modest he is in calling attention to the crookedness, even of gamblers.

We hold that when any shooter fails to score his best to aid himself or anybody else, he has not only placed himself in the attitude of a cheat, but has gone further and proved himself a tool. His plea, that some one else has preceded him in dropping for place to protect friends, proves his weakness, and makes him unfit to shoot in the company of gentlemen shooters.

I believe that if all the gentlemanly shooters who feel an interest in tournaments would frown upon this unfair practice of dropping or pooling for place, that we would soon get clear of the worst element of these tournaments entirely, and bring back into line many thoughtless brothers.

The committee in charge of the Memphis Gun Club are determined to have a fair, square, gentlemanly tournament by enforcing this one rule: that no matter who drops for place or pools for advantage, his money will be returned to him and he will be invited not to participate any further in the shoot. We mean this and no man need come to Memphis thinking that he will escape or practice his tricks.

There is not a member of the Memphis Gun Club who would be guilty of any unfair or ungentlemanly act in shooting, and I feel assured from the letters received from all over the country that we will have a tournament composed of our peers entirely, men who come for the social reunion and the spirit of fun and pleasure there is to be gotten out of a meeting of this kind.

We contemplate issuing a personal invitation to those people whom we wish at our tournament. Accompanying this invitation will be a circular letter, notifying them of just who they may expect to meet and the kind of treatment they may expect to receive.

Our club stands ready to co-operate with the better element of shooters in devising ways and means to revive the spirit of shooting upon a gentlemanly basis, and I am sure that not a single member of this club will ever visit a tournament where they believe there will be any unfairness, and should they be at such a meeting, they will not hesitate to call the attention of the management to the crooked acts of any one, and will refuse to shoot until it is corrected.

T. A. DIVINE.

### Encouraging Words from Memphis.

MEMPHIS, Tenn., Dec. 5.—*Editor Forest and Stream:* Your editorial "Control of Trap-shooting," which appeared in your issue of Dec. 1, is timely and a movement in the right direction. I am glad you have undertaken the task of forming a league or association for the purification of the sport, and sincerely hope every reputable paper in the country will join with you, and that your plan, which beyond question is practicable and feasible, will be carried into effect The plan may be faulty in some particulars and will unquestionably meet with opposition (from a class) and receive much adverse criticism (from another class), but the opposition and critics can offer no better. Why not then try this one? Both the running and trotting turf have been much benefited and improved by just such associations as your article proposes, and I believe many objectionable features of trap-shooting can be eliminated and the professional trickster and crook be driven from the trap. All that is necessary is an organization of the best gun clubs and shooting associations with stringent, inflexible laws that will be fearlessly enforced regardless of their effect upon any individual or club.

I do not take the pessimistic views of some writers who think the evils of trap-shooting are so many and so deeply rooted that the whole business must go to eternal "demnition." That many evils exist, none can deny. That dropping for place, pooling and combining is now the rule and not the exception, I admit. That the amateur and the expert, who shoot straight, stand no more show at the modern tournament than a lamb among wolves, I believe to be true. That there are men shooting at every big and little tournament throughout the country who have no place among gentlemen and honest people, I know. That the standard of shooters has been lowered by the appearance at the trap of the sharper and blackleg until it is little above a gambling scheme, is also true. But I also believe the average trap-shooter is a gentleman by birth or education, and many of them resort to place dropping, etc., solely as a protection against the rascal who is shooting in his company, and whom he has no power to bar from the race. The whole trouble is with the sharper and rascal who has insinuated himself into the company of gentlemen. One base and unprincipled man can do more to pollute and corrupt a dozen gentlemen than a dozen gentlemen can do to exalt and elevate one villain. Get rid of the tricksters, ringers and crooks—the villains in the play—and the rest is easy. In my humble judgment, your plan will accomplish all this, and restore the sport to its original glory when gentlemen indulged in it as a pastime and pleasure.

Much of the present evil arises from the fact that trap-shooting is now largely a business. Eliminate the business features and you have less shooting; remove the worthless crook and tough and you have more gentlemen shooters. That something should be done quickly to correct the abuses and evils of the sport is plain, and if concert of action cannot be had, much good can be accomplished by the individual associations and clubs acting independently and refusing the entrance money of certain known toughs and crooks who attend every tournament of importance.

The Memphis Gun Club, which, as you know, held its first tournament in August last, realizes fully the situation and has already put herself on record and will positively refuse the entrance at her June, 1895 tournament, of certain alleged gentlemen who shot here August last, and will bar from further participation in her shoot any man discovered dropping for place or indulging in any questionable or unsportsmanlike conduct. The committee having the tournament in charge is a unit on this point, and is determined to carry it out regardless of the result.

Look out Messrs. Sharper, Crook and Trickster, when you come to Memphis, you will strike a snag! Now, how many other clubs are there in the country that will emulate Memphis's example? Let's hear from you, gentlemen.

IRBY BENNETT.

### Jack Parker Says, "Go Ahead."

DETROIT, Mich., Dec. 2.—*Editor Forest and Stream:* I heartily coincide with your ideas of preventing crooked work in trap-shooting and think it is a move in the right direction, and you will have the support of nine-tenths of the trap-shooters of America. A judicial board of examiners composed of such men as C. W. Dimick, H. McMurchy, Justus von Lengerke, M. F. Lindsley, W. Fred Quimby, Thos. H. Keller, or others of like stamp, who are directly interested in the continuance and popularity of trap-shooting, would have a tendency to stamp out such work. As long as the percentage division of purses is used at tournaments, it will be hard to prevent dropping for place, pooling, etc. The paying so much for each place, as inaugurated at my tournament last August, made the boys shoot. It was interesting to all the shooters as well as the spectators to see such men as Heikes, Brewer, Fulford, Young, Merrill, McMurchy, Ruble, Grimm and others of like shooting caliber, get up to score and strain every nerve to break each target, regardless if they did all get into the same hole.

I cannot quite agree with my friend Mr. Hough in regard to the condition of affairs at a modern tournament and the roast he gives the rounder, manufacturers' agents, etc. I know there is less dropping for place, pooling, etc., than there was three or four years ago. It is no uncommon thing to see all the experts enter as near first as possible for all day, and all shoot to the front. Go ahead, FOREST AND STREAM, in your good work; I wish your every success.

JOHN PARKER.

### Pansy Gun Club.

KINGSTON, Nov. 30.—Despite the cold, raw wind which swept across the grounds, penetrating even the thickest overcoat, the largest gathering of spectators ever assembled on the grounds attended the Thanksgiving shoot of the Pansy Gun Club. All who could find standing room crowded into the newly erected club house, where a roaring wood fire was kept going. By far the larger number, however, were compelled to remain outside, but they were so much interested in the shooting that they did not seem to mind the cold. The number of shooters was not up to the usual standard, owing to the fact that several of the most active members and best shots were away on hunting trips, but enough were on hand to make it prove interesting. As before stated, the wind was very disagreeable, blowing directly in the shooters' faces, and occasionally accompanied by flurries of snow, giving the targets a very irregular flight, which accounts in a measure for the low scores. Scores:

No. 1, 10 bluerocks, known angles, $1:

| | | | |

JAS. D. SMITH, Cor. Sec'y.

### Flushing Shooting Club.

THE first contest for the Flushing, L. I., Shooting Club's Invitation Cup was shot off on Dec. 8, at the club's grounds near Muncy Hill, L. I. Owing to what was really very short notice of the shoot, and also owing to several of the clubs eligible to compete holding shoots on the same day, only four of the ten entries put in an appearance. L. T. "Davenport" on the 30yd. mark, killed his 25 straight, beating Dr. Wynne, who stood at 29yds. by one bird.

The next race for the cup, which must be won three times to become individual property, will be held on Thursday, Dec. 20, instead of on Saturday Dec. 22, as previously announced. This change of date has been made to prevent clashing with the club's fixtures. The hour fixed is 11 A. M. Wm. T. Wilcox acted as referee.

Invitation Cup, 25 live birds, $10 entrance, birds extra, handicap rise:

| | |
|---|---|
| L T Davenport (30) | 2212121222122222221211222—25 |
| C Hance (27) | 0201020120w. — 5 |
| Wm Lawrence (27) | 0112220202122011220011100—17 |
| W Wynne (29) | 1112111220311112212222122—24 |

Matches at 5 birds for cost of same, tie, miss-and-out:

| | No. 1. | No. 2. |
|---|---|---|
| L T Davenport (30yds.) | 21112—5 | 1220—3 |
| W Wynn (29) | 11112— | 2122—4 |

No. 8 with 4 entries was won by E. J. Clark, who killed 6 out of 7.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

The Riverton-New Utrecht team race, set for Dec. 12, is off, and no date has yet been fixed. The annual meeting of the New Utrecht Club took place on Wednesday, Dec. 12.

The first bi-monthly shoot of the Elizabeth Gun Club, which takes place on Dec. 20 and 21, promises to be well attended, there being no fixtures that can possibly clash with it. That the club will do all in its power to make visitors comfortable is evident from the following, which is from the pen of the president of the club: "The Elizabeth Gun Club's first bi-monthly tournament will be held on their grounds at Elizabeth, N. J., on Thursday and Friday, Dec. 20 and 21. Shooting will begin each day at 9:30 A. M. Targets will be used exclusively the first day, live birds the second day. These bi-monthly tournaments will be held regularly by the club, provided the trap-shooters of New Jersey and in the vicinity of the city of New York will sustain the action of the club by their patronage and attendance at the tournaments. The club believe that the trap-shooters of this locality desire some convenient shooting grounds where trap-shooting both at inanimate targets and at live birds can be had, at regular stated intervals. It is to afford these trap-shooters an opportunity to enjoy the sport that these bi-monthly tournaments are to be given. It is for the trap-shooters themselves to determine, by their patronage of these tournaments, whether they shall continue or not. The club grounds are well arranged for both kinds of shooting. A warm club house, meals at any time during the tournament, and ammunition always on hand, leave no want of trap-shooters unsupplied. The club guarantees fair, honorable treatment to all participants.—ROBT. E. CHETWOOD, President Elizabeth Gun Club."

The scores in the Welch-Dando match of Thursday last, Dec. 6, are worth looking at. They show very plainly that anybody is liable to have a day off, but it is a very rare occurrence for two men of such caliber to take their day off together.

Peter Morris on the 24yds. mark managed to beat George Work, who stood at 38yds., in a 50-bird race on Monday, Dec. 3. The scores made were: Morris 37, Work 36.

The Yonkers Gun Club extended to its members on Thanksgiving Day an opportunity to indulge in several sweepstakes, the birds consisting of live pigeons and live quail. The birds aggregated 140 live pigeons and 100 live quail shipped from Virginia. FOREST AND STREAM has always deprecated and censured trap shooters who shoot live quail—from a trap. It was a sorry spectacle to witness, the shooting of the quail—as they were in poor condition and scarcely able to fly. The members of the Yonkers Gun Club do not wish any more experience in shooting live quail from a trap. It is too unsportsmanlike. J. T. WARING, JR.

The following explains itself: "GRAND RAPIDS, Mich., Dec. 4.—We notice in last week's FOREST AND STREAM you say between Knoxville and Memphis shoots is a nice date for some club to claim for a tournament. The Valley City Gun Club some time since claimed May 30–31, 1895, for their annual tournament and do not want any other local to clash with it. The past season we had the same dates, including June 1, and while we have thought best to shorten the time one day, we want every one to understand those two days will be full of interest to all parties interested in trap-shooting. In looking over the report of the Interstate Dealers' Association, we see that of their ten tournaments in 1894, only one exceeded the Grand Rapids in number of targets thrown, and that was the four days' shoot at Altoona; that ours was the third in number of shooters taking part, Chicago and Pittsburgh having the two largest numbers; and, lastly, in the number of dollars divided among the shooters we were well to the front. We hope to have the Interstate Dealers' Association and Mr. Shaner again with us in 1895, and the kind words spoken by all our guests lead us to think they will all come back again and bring others with them.—VALLEY CITY GUN CLUB, C. F. Rood, Sec'y."

The Towanda (Pa.) Rod and Gun Club will give an all-day shoot on New Year's Day, live birds and targets.—W. F. DITTRICH, Sec'y.

Justus von Lengerke has met with a piece of bad luck. A few days ago he bought a setter from a party in Connecticut and took it home with him to Orange, N. J. During the night it scratched its way out of the barn and escaped; it has not been seen since, although a reward has been, and still is, on offer for its return to 211 Highland avenue, Orange, N. J. The following is a description of the dog: White, with a little light tan marking on the ears and head; small in size but stockily built; 3 years old.

Charles C. Hebbard, of the Empire Target Company, is some three inches taller since his 25 straight at the Townsend Benefit shoot on Dec. 6.

The Meadville (Pa.) Gun Club opened its new club house on Thanksgiving Day. The building is a two-story one, well warmed and lighted, and is commodious in every respect.

Amityville, L. I., has a gun club which was recently organized under the title of the Farmingdale and Melville Gun Club. The officers are as follows: President, E. W. De C. Ree; Vice-Presidents, Nathaniel Ketcham and E.W. Smith; Secretary, J. H. Doud; Treasurer, Edward Baylis. The membership is thirty-four.

Dropping for place was prevented at a shoot held at Meadville, Pa., on Thanksgiving Day by the following scheme, which, however, permitted the element of luck to enter largely into the results of the various events. The numbers of the winning scores in each event were placed in sealed envelopes; before beginning each event one of the sealed envelopes was drawn, and the awards made according to the numbers found in that envelope at the close of the event. The prizes in all the events were turkeys.

A new and decidedly pleasant way of traveling to and from a trap shooting tournament has been introduced by the members of the Palmetto Club of Charleston, S. C. Messrs. Bicaise, Post, Worthen, Steck, Peterman, Holley, Whiman, Peters, Swan, Costello and Bulwinkle, members of that club, journeyed from their home in Charleston to Wilmington, N. C., in the steam yacht E. H. Jackson. Their object in visiting Wilmington was to attend the shoot of the E. D. and G. P. Association held on Nov. 29 and 30.

The first of a series of three 100-bird races between Bill Clark, of Altoona, Pa., and T. W. Morfey, of Paterson, N. J., takes place in the baseball grounds at Altoona on Monday next, Dec. 17; the third will be held at Paterson, N. J., on Dec. 21; the second on Dec. 19 at either Philadelphia on the grounds of the Keystone Shooting League at Holmesburg or at Harrisburg, Pa. The Altoona match will commence at 2 P. M., but sweepstake shooting will form a prominent feature of the day's sport. "Bill" has got out a capital little programme for the boys to amuse themselves with.

Ferd. Van Dyke and his Winchester figured very prominently in the Bloomsburg, Pa., tournament of Dec. 4 and 5. At targets on the second day he scored a consecutive run of 101 straight breaks, scoring in all programme events 127 out of 130, and making a total for the day of 144 out of 150 shot at. Included in the above were a 10 target "walking match" and a shoot at 5 pairs of targets; in each of these events he broke 9 out of 10.

The scores made in the Townsend Testimonial shoot, at Marion, N. J., on Dec. 6, have gone astray in some way, shape or form, at present only hinted at. The winners in the different events are given elsewhere. The attendance of shooters was good, about twenty taking part in the various events.

Mr. Wm. T. Wilcox, secretary of the Flushing (L. I.) Shooting Club, writes that the second contest for the Invitation Cup will be held at 11 A. M. on Dec. 20, not Dec. 22, as originally intended. Take trains at Long Island City for Muncy Hill

On Saturday of this week, Dec. 15, a couple of very interesting matches will be shot on the New Utrecht Gun Club's grounds at Woodlawn, L. I., prior to the regular club shoot. The first is a 25-bird race between Messrs. Street and Van Cleef, the second is a four-handed match between Cornelius Furgueson, Jr., and E. Lohman on the one side, and their respective sons Conny and Danny on the other. Young Conny is shooting a wonderful gait for a boy of his age (not twelve years old yet); last Saturday he killed 23 out of 25 in the various sweeps, while one week previous he duplicated the record with one dead out of bounds.

Dr. Carver offers to meet any ten members of any organized gun club in the States, each member to shoot at 10 birds while he shoots at 100, or any one member of any club, 100 birds a man, $100 a side. He has put up $100 forfeit to bind any match that may be made on the above terms.

Judging from appearances there should be a good attendance at Frank Class's grounds, Morristown, N. J., on Thursday of this week. Several New Englanders have expressed their intention of being present and of shooting along with the rest of them. From the way in which some of those same New Englanders acquitted themselves in the Empire City Handicap of the Emerald Gun Club, they are worth watching when they tackle live birds.

There are no further developments in the Brewer-Elliott matches. The sound of the soughing wind has even died away

EDWARD BANKS.

## Hoey Wins the First Heat.

AFTER a long struggle with J. P. Knapp, the first win in the President's Cup contests at the Carteret Club grounds was scored to Fred Hoey on Wednesday afternoon, Dec. 5. Standing, as he did, on the 32yds. mark, his score of 33 out of 34 was a hot one. Knapp forced him to kill 14 straight in the ties, the bad light making it pretty much of a toss up toward the end of the race. The day was really a perfect one for any one but a trap-shooter; he might have wanted a little wind to help the birds. In the dead calm that prevailed only the very best birds could become anything like hard. As the sun began to go down left-quartering birds from Nos. 1 and 2 traps were, as usual, very easy to miss; the shadow in that corner of the grounds, together with the dark soil and the fence, making blue and black birds very difficult to get on to quickly.

Besides Hoey and Knapp (the latter on the 30yds. mark) there were others who did some good shooting. Chapin and "Schultze," the limit men in the race, scoring 18 out of their 20; Chapin, however, was only in for the sweepstake, not in for the cup. Capt. Money and W. G. Brokaw both lost their 17th birds dead out of bounds and retired, having three misses to their credit. Dolan started out by killing 8 straight; he fell down, however, on his 9th, 13th and 16th birds and was consequently out of it. Thompson also led off with 7 straight, but, dropping his 8th, 12th and 14th, had to take a back seat. George Work and Seaver Page went out on the 7th round with three misses to their credit, Work shooting along up to the end of the 10th round in order to test the gun he was using. Louis Duryea dropped his 1st and 3d birds, thus handicapping himself at the start; he fell by the wayside before he reached the 10th round.

With 19 each to their credit, Hoey and Knapp set to work to shoot off, miss and out, for the cup. As stated above, Hoey did not capture the trophy until the 14th round, when Knapp's bird carried his load out of bounds. It was a dark blue, almost a black, bird that left No. 4 trap at only a moderate rate of speed. Hit hard with the first barrel, it bore off the left; the second shell only served to turn it around; flying straight back over the score, it reached the club house roof only to fall dead a moment later. Hoey thus scores the first win for the President's Cup, donated by George Work, the president of the club. The cup has to be won five times before becoming the property of any individual. It will be remembered that Knapp made George Work shoot a great race to win the Interclub cup on Nov. 21.

During the morning Capt. Money and J. Seaver Page shot a 100-bird race, the Captain coming out ahead with the score of 86 to 84. Full scores follow:

President's cup, first contest, 20 birds, optional sweep, handicap rise, ties divided, miss and out:

## Cracking Targets in Canada.

TORONTO, Can., Dec. 3.—As the summer sports one after another disappear with the approach of autumn, the gun comes to the front and enlivens what would otherwise be dreary half-holidays for many who enjoy a few hours in the country. The H. P. Davies Co., up to date in all other lines of sport, are not behind in this branch. They opened the season on Saturday with a bluerock shoot under the direction of W. McDowall, at the Coxwell avenue grounds. There was a large attendance, and the sharp competition in each event proved very interesting to the spectators as well as to those taking part. Eight prizes were shot for, one in each of the first five and three in the sixth event. Ties were shot off in the succeeding event. The winner's name appearing at the head of the list. Scores:

No. 1, 7 targets:

| | | | |
|---|---|---|---|
| McDowall | 0111111—6 | Morley | 1100101—4 |
| Thompson | 1111101—6 | Winchell | 1010110—4 |

W. McD.

## Glesenkamp Makes a Big Score.

PITTSBURGH, Pa.—About 150 spectators shivered in the rain and stamped around in the mud at the Country Club grounds on Saturday Dec. 8 and watched the pigeon match between Jos. Glesenkamp and S. H. Vandergrift for stakes aggregating $200. Nearly everything was against the shooters, but notwithstanding the opposition of the rain, mud and the general tendency of the birds to dive and dart, Glesenkamp made the handsome score of 91 out of the 100. Score:

| | |
|---|---|
| Jos Glesenkamp | 11121122121222212212120 21—24 |
| | 12121022202231021211202 11—21 |

*The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

## Live Birds at Willard Park.

PATERSON, N. J., Dec. 4.—It was originally intended that the Paterson and Elizabeth gun clubs should shoot a team race at Willard Park this afternoon; the announcement had been made that such was the programme. There was consequently much disappointment at the failure of the Elizabeth team to materialize, a large number of spectators having gathered together to witness the match. Birds and shooters being present, the afternoon was spent in bringing off the following events:

No. 1, 10 live birds, $5:

| | | | |
|---|---|---|---|
| Morfey | •111002121— 7 | Hopper | 2102220112— 8 |
| George | 0002121112— 7 | Wright | 2222•20•22— 7 |
| Morgan | 0222212111— 9 | Smith | 2112112212 —10 |

No. 2, $1, miss-and-out:

| | | | |
|---|---|---|---|
| Morfey | 112121212122221—14 | Morgan | 21121221110 —10 |
| Wright | 10 — 1 | Smith | 211112222112120—13 |
| George | 11212• — 5 | Milt Lindsley | 1220 — 3 |
| Hopper | 11111• — 5 | | |

No. 3, 10 birds, $5, same as No. 1:

| | | | |
|---|---|---|---|
| Morfey | 2111112111—10 | Morgan | 1002121012— 7 |
| George | 0101112121— 8 | Wright | 2211222220— 9 |
| Hopper | 2022122121— 9 | Lindsley | 2222122220— 9 |

No. 4, $1, miss-and-out:

| | | | |
|---|---|---|---|
| Morfey | 1210—3 | George | 10 —1 |
| Wright | 2222—4 | | |

*Dec. 1.*—Lee and Post shot a couple of races this afternoon, Lee winning both matches. The conditions were 10 live birds, $10 entrance Long Island rules, Post allowing Lee 3 birds. As Lee is slightly crippled in both arms, having been paralyzed about two years ago, the above result was a surprise both to him and his opponent. The birds were a fair lot, being taken from the crates just as they came to hand. Post and Morgan shot two 10-bird races for the price of the birds; in each event Morgan made clean scores, beating Post by one bird each time.

No. 1, Post vs. Lee:

*Trap score type—Copyright 1894, by Forest and Stream Publishing Co.*

| | | | |
|---|---|---|---|
| Post | 1 1 1 0 1 1 1 1 1 1—9 | Lee | 1 1 1 1 1 1 1 1 1 1—10 |
| Post | 1 1 1 0 1 1 1 0 1 1—8 | Lee | 1 1 1 0 1 1 1 1 1 1—9 |

Nos. 3 and 4, price of birds, Hurlingham rules:

| | | |
|---|---|---|
| Post | 2110211111— 9 | 1211120211— 9 |
| Morgan | 1111211112—10 | 1111121112—10 |

DUTCHER.

## Westminster Kennel Club.

SEVERAL members of the Westminster Kennel Club spent Saturday, Dec. 8, at Babylon, L. I., knocking over live birds on the club's grounds. With such well known amateurs as Fred. Hoey, J. P. Knapp, George Work and F. G. Moore at the score, there was bound to be some good shooting, although the day was far from being all that could be considered a good day for live birds. Five events were shot, the scores and winners being given below:

| | No. 1, 3 live birds, then miss and out, $5: | | No. 2, same: |
|---|---|---|---|
| F G Moore (30) | 21110 | — 4 | 22222—5 |
| F Edey (27) | 2121110 | — 6 | 10 —1 |
| Fred Hoey (30) | 1122212222222 | —13 | 11120—4 |
| George Work (30) | 10 | — 1 | 220 —2 |
| J P Knapp (29) | 110 | — 2 | 22222—5 |
| C M Chapin (26) | 212120 | — 5 | 110 —2 |
| R Brandreth (28) | 1222221212222 | —13 | 120 —2 |
| F Brandreth (27) | 1111221222220 | —12 | 120 —2 |

No. 3, sweep, 7 live birds, $5, handicap allowances, 26 and 27yds. men allowed one miss as a no-bird; 25yds men and under, one miss as a kill, ties miss and out:

| | Ties. | | Ties. |
|---|---|---|---|
| F G Moore (30) | 1122222 —7 | 20 —1 | C M Chapin (26) 2122211 —7 | 200 —1 |
| F Edey (27) | 1112122 —7 | 10120—3 | R Brandr'h (28) 2102w. —3 | ..... |
| F Hoey (30) | 2222221 —7 | 2222 —4 | F Brandr'h (27) 02212212—7 | 1120 —3 |
| Geo Work (30) | 1111122 —7 | 1220 —3 | P H Morris (24) 2111211 7 | 10110—3 |
| J P Knapp (29) | 2222222 —7 | 2222 -- 4 | | |

No. 4, optional sweep, 10 live birds, $5 to $10 entrance:

| | | | |
|---|---|---|---|
| Moore (30) | 22022220w —6 | Chapin (26) | 2210111121—9 |
| Edey (27) | 010w —1 | R Brandreth (28) | 0120w —2 |
| Hoey (30) | 2222222022—9 | F Brandreth (27) | 011110w —4 |
| Work (30) | 2011111222—9 | Morris (24) | 2021001110—6 |
| Knapp (29) | 2222220122—9 | | |

Work wins tie.

No. 6, handicap sweep, miss and out, $5:

| | | | |
|---|---|---|---|
| Moore (30) | 120 —2 | Chapin (26) | 111222222—9 |
| Edey (27) | 11220 —4 | R Brandreth (28) | 212121110—8 |

Won by Chapin.

## Townsend Testimonial Shoot.

The names of the winners in the various events shot at the Townsend Testimonial shoot held at Marion, N. J., on Al. Heritage's grounds, together with their individual scores, are given below:

No. 1, 10 bluerocks Sigler, Hobart, Thomas and Morfey 8, Ivins and Lindsley 7, Courtney 6, Pope 5.

No. 2, 15 bluerocks. Ivins 15, Hobart and Morfey 13, Courtney 11, Thomas 10.

No. 3, 10 bluerocks. Morfey, Woodruff and Sigler 9, Hobart 8, Courtney 7, Thomas 6.

No. 4, 20 bluerocks. Sigler 19, Morfey and Courtney 18, Geoffrey and Thomas 17, Van Dyke, Ivins and Darby 16.

No. 5, 15 bluerocks. Sigler 15, Courtney, Woodruff, Ivins and Morfey 13, Hobart and Thomas 12, Lindsley 10.

No. 6, 10 bluerocks. Sigler 9, Lindsley 8, Heritage 7, Keogh 6.

No. 7, 10 bluerocks. Sigler 9, Ivins 8, Lindsley 7, Keogh 6.

No. 8, 10 bluerocks. Ivins 10, Sigler 8, Lindsley 7, Heritage 6.

No. 9, 10 bluerocks. Ivins and Courtney 8, Sigler 7, Keogh 6, Lindsley 5.

No. 10, 10 bluerocks. Sigler 10, Ivins 9, Courtney 8, Pope 7.

No. 11, 10 bluerocks. Heritage 8, Courtney and Sigler 7, Ivins and Lindsley 6, Pope 5.

No. 12, 10 bluerocks. Hobart 10, Whitehead 9, Sigler and Roberts 8, Morfey, Courtney, Woodruff and Geoffrey 7.

No. 13, 25 bluerocks: Hebbard 25, Sigler 24, Geoffrey 23, Terry, Heritage and Morfey 22, Van Dyke 21.

No. 14, 20 bluerocks. Sigler 19, Morfey and Courtney 18, Geoffrey and Thomas 17, Van Dyke, Ivins and Darby 16.

## West Ewing Gun Club.

TRENTON, N. J., Dec. 3.—Below are the scores made at the West Ewing Gun Club's shoot on Nov. 29:

No. 1, 25 bluerocks, known angles, 3 traps:

| | |
|---|---|
| E E Bainbridge | 0111111011110110101011111—18 |
| W Bond | 0000000101010101010001100— 8 |
| T F Rose | 1110111110111101111010110—19 |

No. 2, same:

| | |
|---|---|
| Bainbridge | 1111111101111111111101110—22 |
| Bond | 1100111111010100111101001—16 |
| Rose | 0111011111111101110000110—17 |
| Fine | 0001101111111010010w —12 |
| W Harold | 1001110111010010010001w —11 |

No. 3, 7 bluerocks:

| | | | |
|---|---|---|---|
| Bainbridge | 1111111—7 | W Roche | 11010 —3 |
| Rose | 001111 —4 | Colgun | 100 —1 |

No. 4, 10 live birds:

| | | | |
|---|---|---|---|
| Bainbridge | 1011111101—8 | Rose | 0111101111—8 |

Bainbridge: Francotte gun, 42grs. Schultze, 1⅛oz. No. 7. Rose: L. C. Smith gun, 10-gauge, 3⅛drs. E. C., 1¼oz. No. 7½. Referee, W. P. Bainbridge. Scorer, Dr. Geo. L. Pearson. H. A. N.

## Scores of the John F. Weilers.

ALLENTOWN, Pa., Dec. 6.—The John F. Weiler Gun Club held its monthly shoot at Manhattan Park on Dec. 4. In the medal race at 25 targets, Brey won the gold medal with 21 breaks, Mohr taking the silver medal with a score of 19. The scores made by the 11 contestants in this race were as follows: Brey 21, Mohr 19, Benning, Acker and Ulmer 18, Zellner, Grim, Schantz and Boyer 17, Hohe and Klingler 16.

Three live bird sweeps resulted as follows: No. 1. Smith 5, Klingler 3, Mohr 3, Benning and Ulmer 2. No. 2. Benning, Smith and Hupport 5, Weiler and Klingler 4, Acker 1. No. 3. Smith, Benning, Mohr and Weiler 3, Klingler 0. ALEX. W. BEATTY, Capt.

## "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## The Effect of the Wadding Material Upon the Performance of Shotguns.

BY ARMIN TENNER.

Superintendent American Testing Institution.

(Concluded from Page 482.)

[We give the conclusions made by Mr. Tenner from his extended tests.]

Two points have. I think, been settled pretty conclusively by this time. The figures obtained thus far demonstrate that it is not advisable to use a larger wad of any kind of material in a 12-bore gun than the regular 12ga. Guns with a close bore seem to do much better service with the latter size than with either 10 or 11ga. wads. The second fact established is this: While the cork composition wads are very uniform, leave the gun barrel perfectly sound, and would thus warrant the expectation that they ought to prove superior to the various kinds of felt wads, the tests have not shown this to be the case. Cork wads may be preferable to poor felt wadding, but they do not seem to give better or even as good results as the superior qualities of felt wads.

The same wadding material and powder and shot charges produce different results in the various shells. From the results thus far obtained it would seem that the primer plays even a more important factor toward the behavior of the nitro powders than the wadding material. It is clearly shown that all smokeless powders give the best service with the U. M. C. No. 3 primer, as used in the smokeless, lightning and trap shells, and this both in regard to penetration and pattern. As a rule it produces the most uniform results; it gives the highest penetration throughout. It secures quick ignition and a pretty thorough combustion of the various nitros. It is not equaled in this respect by any other American primer, and is unsurpassed by any foreign igniting agent.

A thorough combustion not only assures the best possible penetration, it also diminishes greatly the tendency of nitro powders to corrode the gun barrel, which is largely due to the gases resulting from only partially burnt powders.

The smokeless shell has, in the course of the test, shown another valuable feature: It is far less affected by moisture than other paper shells. While I do not, in principle, believe in and advocate the doctrine that our sportsmen should use American articles of manufacture simply because they are home productions, I do think and believe, on the other hand, that we should always then prefer American goods to foreign, whenever the former compare favorably with the latter. This is the case with the smokeless shell. Many of the imported shells are inferior to it, and none of them excel it.

From the values thus far quoted it appears that the black powder did not compare favorably with some of the nitro powder loads. The latter proved superior in point of penetration and pattern. This is certainly contrary to all expectations, and in order to meet the objection that I should not have confined myself to one particular make of black powder, I concluded to try next, also, some other popular black powders.

---

While the several black powder loads produced fair averages of both pattern and penetration, the results are far from being remarkably good. The values obtained do not compare with the best values secured from the various nitro powder loads. I still have to find a black powder in this country which is superior in pattern, penetration and regularity to the better nitro powders, loaded in suitable shells and properly wadded. It is a general belief that the best average patterns are obtained with the service charges of the propelling agents, and that every increase of the powder charge is followed with a less satisfactory pattern. This rule does not seem to apply to every case, and low velocities do not, by any means, always mean comparative high patterns.

Greener says in his Modern Shotguns, "Velocity is the test of shooting. Velocity generally means a good pattern, and a good pattern at long range is convertible with velocity; penetration is velocity." I cannot agree with Mr. Greener in the full sense of the paragraph quoted. Whenever a certain limit of velocity is overreached, every increase of velocity beyond such a limit is generally followed by a reduced pattern. But it would appear from the results of the test as previously recorded and those to follow that with many powders the limit of the best pattern has not been approached with the service charge, and this particularly when chokebore barrels are employed. It will be noticed that the velocities of all nitro powders obtained with the U. M. C. No. 3. primer are higher than those produced with the other primers, and the same loads of powder and the same wadding and shot charges. Yet, as a rule, the pattern of the No. 3 primer are higher than those of the other shells.

Black powder, too, gives good pattern with increased charges.

---

In some cases the cardboard wad, employed instead of the nitro cardboard wad, did even better than the latter. In rainy weather or when the air is richly saturated with humidity, or in cold weather, nitro powders develop diminished velocities; some only to a small, others to a larger extent, according to their respective susceptibility to moisture. Black powder is less affected by these agents than any of the nitros.

Reference has been made to a claim presented by the Winchester Co. in regard to its blue cardboard wad. It is alleged that this wad, owing, I presume, to its high degree of cohesive quality, will prevent the other wads employed in the same shell from being blown to pieces by the gases generated by the powder charge. This claim is founded, it seems, upon an utterly erroneous premise. The gases generated by the powder charge are not developed suddenly; if they were, we would not be reckoning with an explosion, but with a detonation. The gases were developed gradually, although in a very minute time.

It can fairly be presumed that the powder gases are the sole cause for damaged wads. Any material such as cardboard, leather, or tarboard or tar-paper, less porous than felt will protect the felt wad sufficiently against the effect of the powder gases if inserted between the powder charge and the felt wadding.

### Effect of Suction on Wads.

The wad may come to grief also from other causes. Thus, for instance, the shot charge appears to act as a suction when traveling through the barrel. Although it appears contrary to theory, there can be little doubt that a sort of a vacuum is created in the barrel; first by the shot column and secondly by the latter and the wadding. If it were correct that the powder gases must be regarded as the only cause for damaged wads, it would hardly be possible for any material to resist this very powerful force, no matter how good the cohesive quality of the wad might be. Now, as a matter of fact, those wads are generally stretched or blown to pieces which are made out of a material wanting in cohesive qualities—such wads as one can pull in two between the thumbs and forefingers of both hands. Among the wads experimented with were several of this kind. The V. L & D. elastic brown felt wad, their paper filler wad, the Winchester nitro gun wad, and, to a smaller extent, the U. M. C. salmon cushion and the second quality of V. L. & D. express wads. A large percentage of the three first kinds were gathered in a more or less damaged condition; a smaller percentage of the two latter showed also traces of damage. The majority of these wads were stretched to twice their normal length and more. If the gases had caused this, it would be difficult to explain how it was brought about. But it was probably the suction of the shot charge that did it. I am not aware that this theory has been offered by any one else, and before this.

I, too, hesitated quite a while before I concluded to make the assertion in question. To determine if my belief rested upon a sound basis, I made various tests on that line. They all proved that I have good warrant that in this instance, like in many others, theory does not agree with practice. The shrinking of fired paper shells in the cartridge chamber is another proof for my assertion, but not the most conclusive one. I consider my experience with the base wad, as employed in the Walsrode shell, for instance, the best and most unimpeachable evidence in support of my claim. These base wads are put into the shell for the purpose of reducing the latter's volume. In several instances manufacturers of shells neglected to secure these hard base wads sufficiently fast to the shell's base. Now, what was the result? In many cases these base wads follow the shot charge up in the barrel. More than this, various gun barrels were actually bulged by these base wads at the choke. The base wads were drawn after the load with such force that they approached the choke of the barrel with sufficient power to cause a bulge in soft Damascus barrels. Now, these wads have their place behind or beneath the powder charge. By what other agent could they have been forced out of the shell and driven into the choke with sufficient power to do damage to the barrel? It is chiefly the suction that causes wads to stretch or to be in two, the effect of the powder gases are not responsible for it if they do not come in direct contact with the felt. This very fact has prompted shell manufacturers to secure these base wads well to the base. Justice commands me to say here that I never experienced this phenomena with the U. M. C. Walsrode shell nor the German Walsrode shell. I think I have thus shown that the shot charge very likely acts as a suction. Therefore, no kind of wad placed over the powder charge can or will prevent inferior wadding material from being disfigured through the agency of suction. It is the suction that causes wads to leave the gun barrel in a damaged condition; the effect of the powder gases appears to have nothing to do with it.

### Wads and Leading.

Various wads again are labeled to prevent the leading of gun barrels. This is another deception. I fail to see how a wad can prevent the leading of gun barrels. Shooters should not permit themselves to be deceived in such a way. The lead deposited in the gun barrel can very readily be removed. Blue ointment applied with a rag will do it effectually. Do not use any sort of wire brushes for removing the lead deposited in gun barrels. They are all liable to scratch the barrel. I caution against the use of all such brushes; they do more harm than good. I tried several kinds of these wire brushes and invariably scratched the bore sooner or later.

The mercury contained in the blue ointment will dissolve the lead. In case the salve proves too weak use pure mercury. Place a cork in the muzzle of the barrel, then pour into the barrel, from the breech end, about two ounces of mercury; cork up the breech and let the quicksilver travel slowly up and down the barrel, turning the latter around at the same time. Gather the mercury and keep it for future similar purposes. It can be used over and over again. It will do its work as well in the rifle as in the shotgun. After the lead has been dissolved clean the barrel with a clean, dry rag.

Hang fires have been common with the Victor, Blue Rival, Climax and Nitro Club shells in connection with Schultze, E C and American Wood powders, and the service charges of powder. These defects are less marked when heavier charges of powder are employed, but the velocities are always below the values obtained with the Smokeless shell and the same load otherwise. The same shells, of course, develop a similar result with Walsrode powder, and even the Rapid does not appear to suit the latter. Heavy hang fires were experienced with it and Walsrode powder, and in several instances the base of the shell showed, after firing, traces of damage. Attention has previously been called to the fact that all weak primers display a marked tendency to corrode the gun barrel and breech of the gun. The reason for this may be explained as follows: Whenever the combustion of a nitro powder charge in a gun barrel is imperfect—and such is generally the case with weak primers—the powder charge will develop a comparative low pressure. Low pressurs or imperfect combustion create peroxide of nitrogen, and when the latter combines with the oxygen of the air, or moisture, nitric acid is formed, which must be looked upon as a very strong acid, and as one liable to corrode iron or steel very readily and badly. When, on the other hand, a thorough combustion of the powder charge is brought about, such as secured with the U.M.C. No. 3 primer for instance, ammonia is developed instead of peroxide.

It may seem strange to the reader that in many cases nearly or the same loads are repeated. This was necessitated by the various conditions under which the several loads were fired. The test was made during warm, dry, rainy and cooler weather. Every climatic change is followed by a different behavior of the powders. In order to do all powders justice, to treat them all alike, in various cases the same load had to be fired again to serve as a standard of comparison for the others under similar conditions. This explains again why the same load shows variations in velocity and pressure. They are natural and cannot be overcome.

Load 131—33gr. Wals. pwd. in U.M.C. Wals. shell, 1 V. L. & D. Hurlingham express, 1¼oz. shot; v. 1027ft. sec., great. diff, 47ft. sec., gpr. 8830lbs., great. diff. 360lbs.

| Pat. | | | Pellets. | Pat. | | | Pellets. |
|---|---|---|---|---|---|---|---|
| 1 | (11) | 242—great. diff. | 43 | 4 | (6) | 224—great. diff. | 49 |
| 2 | (9) | 265 " " | 24 | 5 | (8) | 236 " " | 44 |
| 3 | (8) | 238 " " | 42 | | | | |

To demonstrate to the reader how largely propelling agents are affected by climatic influences, I beg to ask him to look up the velocities obtained under normal temperature and a normal percentage of humidity in the air. Here is only one illustration: 3 drams E.C. powder developed under normal conditions, an average velocity of 970ft. sec. Let us compare these values with those obtained when the atmosphere showed 90 per cent. humidity.

Load 132—3 drms. E.C. pwd, in smokl. shell, 1 trap, 1 U.M.C. ¼in. pink edge, 1 blk. edge wads (Nov. 5, therm. 50 degrees, barom. 29.45, humid. 90 per cent.); v. 870ft. sec., or a loss of 100ft. sec.

On the same day 3 drams of E.C. powder, with 1⅛oz. of shot, developed a velocity of 915ft. sec., and with 3¼ drams of E C. powder and 1¼oz. of shot an average velocity of 961ft. sec. was secured.

### Length of Shell.

The smokeless shell actually measures 2 9-16in., while the Rapid 2⅝in. shell is actually 2 21-32in. long. The English standard shell length is 2 9-16in.; the standard German shell 65 millimeters, or about 2 9-16in.; Some German shells measure only 2½in. It is very seldom that longer shells than the standards are used in England or Germany. A 2¾in. shell is considered in both of these countries still a suitable shell, but when it comes to 3in. shells they are looked upon as the hobby of cranks, and I must confess that I have never found an excuse for going so far in the length of a shotgun shell. Quite a number of our best known trap shots employ a 3in. shell, some even a 3¼in. shell. Their object is to secure thereby a greater killing force. Is this really the case? Unless the chronograph is unreliable, unless twice two make more than four, it is certainly not the case. I have still to find a 3in. shell which will give a better pattern and a higher penetration than a 2¾in. shell with the same powder and shot charges. Greener, with whom I differ on many points advanced by him in relation to ballistic laws, is coming very near the truth when he says: "The 12-bore gun is not made a more powerful weapon by lengthening the chambers and using a cartridge case more than 2¾in. in length. Even with the 2⅝in. case a charge of 50grs. of Schultze or E C powder may be pressed in, and with the full complement of wads and 1¼oz. of shot will be found to give as good results as any obtainable with larger charges of this gauge. Cases 3in. in length have nothing to recommend them, and guns constructed for them require great attention or they will not shoot at all regularly."

I have arrived at the same conclusion, and I am by no means basing my opinion on theory alone. My three-barrel gun is chambered, for instance, for a 2⅝in. shell, although I have used it, and it was originally intended, for large game shooting. I have never found it to fail me when I used it on big game at a reasonable distance.

My friend Elliott uses, as I am informed, a 3¼in. case. I am further informed that he shoots 3½drs. E.C. in a 3¼in. Leader shell. The Leader has the same primer as the Blue Rival. The velocity he obtains with 3½drs. E.C. powder and 1¼oz. of shot is not greater than I can secure with 3¼drs. powder in a 2⅝in. shell. Yet Mr. Elliott has scored 100 pigeons straight. This proves that pigeons can be killed with a fair velocity. But I do not wish to destroy Mr. Elliott's or any one else's delusion on this point; nor do I intend or hope to convince them that they can accomplish the same result with a shorter shell, for I know too well that "a man convinced against his will will be of the same opinion still." A certain class of our trap-shooters are, to use a common expression, stuck on preposterously heavy powder charges. Some of them use 3¾drs. E.C., Schultze or Wood powder, and some even 4drs. and more. Most of them are very familiar with the method of loading these powders so as to guard against excessive pressures and danger. They employ especially soft wadding, which naturally diminishes the tension in a gun barrel. But their example is, nevertheless, a bad one. Many shooters who are less skilled in loading shells may imitate these heavy loads, they may use less substantially built guns, and then a source of danger is certainly created.

If all the energy stored in such a heavy powder charge is really developed, an exceedingly high pressure follows; the recoil will be disagreeably heavy, the pattern wild. But it frequently occurs that with such heavy powder charges the velocity is lower than that produced by a lighter charge. Why is such possible? A larger powder charge produces an increased pressure in the rear part of the shell, whereby the foremost part of the charge is pressed together, or rather pressed against the wadding in the shape of a pin (see Prof. Hebler, "The Minimum Caliber, or the Infantry Weapon of the Future, 2d vol., p. 102), and leaves the gun barrel unconsumed, or is burned at the moment of leaving the muzzle and coming in contact with the atmospheric air. In other words a large portion of the powder charge is in such a case not utilized. It is not transformed into gases in the barrel at the proper place and time.

This phenomenon is not only confined to the shotgun; it is also experienced in the rifle, although here the time between pulling the trigger and the moment the shot quits the muzzle is longer than with the shotgun.

For similar reason I do not agree with those who recommend the powder charge of being pressed down into the shell with ordinary force. With some powders the velocity can be reduced considerably by compressing the powder charge too much. A good propelling agent should and will give the best result if the wad is simply brought home with a moderate pressure on the powder charge. It is a faulty feature of the powder if excessive pressure is required or every pressure is to be avoided.

### Balling of Shot.

I think that to a great extent the balling of shot is created in consequence of an unusual quick combustion of the powder charge. The gases are developed so rapidly that the shot column is pushed forward very violently, and that in spite of the best wadding the rear portion of the shot charge is wedged into the foremost part. The heat has hardly anything to do with the balling.

### Climatic Influences.

The several powders and loads developed different velocities and gas pressures on one day and occasion than another. This is, as previously said, principally due to climatic influences. To place all powders on an equal footing, it is necessary that at certain intervals they should be tested under precisely alike conditions. Although such has been the policy throughout the trial, I have, nevertheless, considered it advisable to test powders and shells for velocity and pressure only whenever the temperature showed abnormal conditions. Such was the case on Nov. 5. On that day the thermometer registered 50°, the barometer 29.5, the hygrometer 90 per cent. humidity. A few of the values obtained on that day have previously been recorded, and are found under load 132. But to make the list complete, they will be here repeated:

| | |
|---|---|
| 3 drms. E.C. pwd.. smokl. shell, 1 trap, 1¼in. pink-edge wad, 1 blk. edge wad, 1⅛ oz. shot | 870 ft. sec. |
| 3¼ drms. E.C. pwd , 1¼ oz. shot, same shell | 961 " |
| 3¼ drms. E.C. pwd , 1 oz. shot | 1010 " |
| 3⅛ drms. E.C. pwd., 1⅛ oz. shot | 1026 " |
| 3⅛ drms. E.C. pwd., 1¼ oz. shot | 1015 " |
| 60 grs. E.C. pwd., 1¼ oz. shot | 1065 " |
| 60 grs. Schultze pwd., 1¼ oz. shot | 1090 " |
| 3⅛ drms Schultze pwd., 1¼ oz. shot | 1018 " |
| 3⅛ drms. Am. Wood pwd., 1¼ oz. shot | 1020 " |
| 60 grs. Am. Wood pwd., 1¼ oz. shot | 1154 " |
| (In the last case the gas pressure was very high—11420 lbs.) | |
| 3¼ drms. DP. smokl. pwd., 1¼ oz. shot | 1012 " |
| 33 grs. Wals. pwd., 1¼ oz. shot | 1018 " |
| 50 grs. E.C. pwd., trap shell, Fulford's l., 1¼ oz. shot | 1090 " |

The Fulford load is contained in a 2⅞ in. shell.

### Normal Wadding vs. Soft Wadding.

The experiments have demonstrated the fact that some propelling agents are less susceptible to the wadding material than others, and that the various powders are differently affected by soft and dry wadding. In order to enable the reader to make a more precise comparison than he can on the large numbers of figures quoted on this very point, and to show at the same time how the several powders react toward increased charges, I conducted a special test on Nov. 15, when the thermometer registered 51° F., the barometer 30.30, the hygrometer 68 per cent. humidity, for the purpose referred to.

To my knowledge, similar tests have never been carried out on the same line and scale anywhere, and I do not care to repeat them at an early day. My target has been partially ruined through balling of the shot, which was especially marked with the double charge of E. C. powder, although this powder very rarely balls the shot; and my pressure gun came very nearly to grief with the double charge of American wood powder. It may be presumed that neither the double charge of E. C. or Schultze powder were fully tranformed into gases. A portion of the charge of these two powders evidently left the muzzle unburned. The American wood powder was the last of a 5-pound cannister, mostly fine grained; hence the excessive pressure.

Von Förster and Plastomenite powders proved also less violent than black powder. Plastomenite showed a very low degree of violence. It is safe to assume that no gun will be damaged with this powder under normal conditions. I doubted it, even a year ago only, that a nitro powder could ever be produced which would be less susceptible to increased charges than the old reliable black. The experiments show that I was wrong. There is less danger from overcharges also with the other powders than generally supposed. It is quite a task, for instance, to load a shell with E. C. powder to a dangerous extent. But I must caution against the common shells—such as Climax, Blue Rival and Nitro Club—in connection with Walsrode or Leonard powder, as overloading is easily accomplished. If cheap shells are to be employed, the shooter should buy them loaded. The ammunition manufacturers and large dealers are equipped with good loading apparatus and machines. They guard against overcharges, and can avoid them successfully. The individual shooter cannot. Do not rely on your most trusted servant to load your high grade ammunition. They are human and liable to err. There is very little danger, if you procure your loaded ammunition from a reliable manufacturer of ammunition or large dealer. They load all smokeless powders well; better than they can be procured anywhere in the world. It will be seen that some powders give a higher velocity with soft, dry wadding than with normal wadding. As a rule, however, the regular wadding gives the best results. In very rare instances does the velocity keep step with the increase of bursting strain, when heavy charges of powders are employed. It is quite satisfactory to note that nitro powders can be made which may be considered safe.

With the remarks about the use of cheap shells for high-grade powders, I do not wish to convey the impression that such powders are particularly dangerous They are not more dangerous than some others, if properly loaded and employed. But the individual sportsman should for safety sake and to guard against severe charges, use for them the special shell, *i. e.*, a shell provided with a base wad, which serves to bring the bulk of the charge in the shell of the level of the charge of other powders, such as can be loaded bulk for bulk with black powders. We have already seen how the several lengths of shells influence the performance of shotguns.

### The Top Wad.

Top wads should be light and composed of soft, preferably brittle material. They should either break before quitting the muzzle or fly to the side or drop to the ground not far distant from the muzzle. In England experiments have recently been made with different kinds of top wads. It has been asserted there that the best results are obtained when the cardboard top wad is cut diagonal in two. This claim has also been made in this country, and I concluded therefore to carry out some experiments also on that line, and with this test to finish my work. The result of my experiments have not substantiated the assertion alluded to. The U. M. C. top wad is very light, thin and brittle. As a rule the wads slit in two when leaving the gun. It is evident that the cutting of the top wad has no beneficial effect upon the shooting qualities of shotguns.

### What Appears to Have Been Proven by the Test.

The report has been so framed as to enable every intelligent reader to draw his own conclusions from it.

In my opinion, it has been shown that black powder is less susceptible to inferior wadding than the nitros, that it generates its gases more gradually than the latter, and that it will practically make little difference whether a cardboard wad is used next to the powder, or a trap or similar soft wad. It even appears that a rigid wad is desirable. The principal requirement for black powder wadding is sufficient thickness—from ¼ to ⅜ of an inch—elasticity, density, and cohesive quality of the felt or its substitute. Whether one or more wads are employed, does not appear to be of any great consequence; neither does it differ much whether the wadding is dry or lubricated, as far as the performance is concerned. Considering velocity, pattern, and pressure in every case combined, we find that the best results were obtained with the service charges (3drs. powder, 1⅛oz. shot) when 1 cb., 1 U. M. C. 12-ga. white felt, 1 cb. were used, and with the 3¼drs. powder and 1⅛oz. shot, with one express wad, although it is not conclusively proved that the former wadding might not equal the latter. The 1⅛oz. shot charge produced the best velocity and pattern, values compared with the 1¼oz. load, and in the last record not only comparatively, but absolutely. Only one size shell (2⅝in.) was employed. Neither in point of pattern nor velocity did black powder show any superiority over the nitros; it only made a good showing in respect to pressure—comparative safety.

DuPont's smokeless powder (2¾drs., 1⅛oz. shot) service load, did best with 1 U. M. C. trap and 2 regular black edge wads, and next with 1 cb., 1 Eley white felt, 1 cb. wad. The 3drs. powder, 1⅛oz. load gave the best results with one express, 1 paper filler wad; next with 1 cb., 1 U. M. C. white felt 12-ga., 1 cb. wad, and considering the corresponding pressure, the last load performed best. With the 2⅞in. shell and 3¼drs. powder and 1¼oz. shot, 1 trap and one black edge ¼in. gave the best results, but this is still, in point of pattern, below the value obtained with load 48 and gun No. 4.

Schultze powder, service charge, produced the best results with load 9, 1 U.M.C. regular black edge; and next with 1 cb., 1 Anderson cork compound wad, 10-ga., 1 cb.

The best and a remarkably good result was obtained with load 253 (b), 2⅝in. trap shell, 1¼in. black edge, 1¼oz. shot. With 3¼drs. powder, load 133 makes the best showing; wadding 1, 12-ga. U.M.C. ⅜in. black edge, 1¼oz. shot. Relatively, the best values were obtained with 1⅛oz. shot (load 181).

E.C. powder, service charge, did best with 1 V. L. & D. Hurlingham express wad; next with 1 Hurlingham felt and 2 cb. wads (see loads 56 and 47). The best values were obtained with the 2¾in. shell and 1¼oz. shot (load 275). Relatively the best results were obtained with load 156.

American Wood powder, service charge, best results with load 46; 3¼drs., 1¼oz. shot, best result with load 252. The highest pattern gave load 257. Relatively, by far the best result was obtained with load 251.

Walsrode powder, service charge, best results with load 74; 27grs. highest values with load 80. Relative and absolute highest values were obtained with load 281.

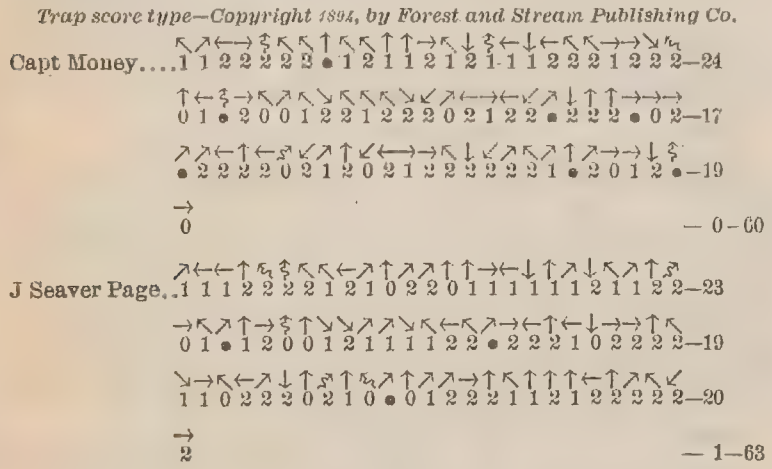
I think the tests demonstrate the fact that there is hardly any occasion to employ a longer than a 2¾in. shell in a 12 bore shotgun; 3in. shells occasionally give a high pattern, but they perform, as a rule, less regularly than a 2¾ or 2⅝in. shell. For ordinary shooting and nitro powders, a 2⅝in. shell will do about as well as any longer shell. I have not found that, beyond the 2¾in. shell, the velocity can be improved by a longer shell.

E.C. powder did best, of all powders now in the market in this country, in point of low gas pressure. DuPont., Schultze and Walsrode exceeded somewhat the bursting strain average of the E.C., but did not develop any hazardous figures.

The problem at issue has not been solved conclusively, but I could not continue the test further. The expenses incurred amounted to $894 50. A former opponent of the institution contributed $100, other parties $150, toward defraying the expenses. Deducting the $250 from the $894.50, leaves a deficit of $644.50 for the Testing Institution. But if the work performed proves of benefit to the American sportsman, the American Testing Institution will then consider itself amply compensated for the small sum sacrificed for the general good.

## Rain Stops the Money-Page Match.

On Saturday, Dec. 8, J. Seaver Page and Capt. Money came together again in a 100-bird race at the Carteret Club's grounds, Bergen Point, N. J. In the match between these two shots which was decided on the previous Wednesday, details of which are given elsewhere, Capt. Money won by two birds with the score of 86 to 85. The birds in that race were said to be a great lot of flyers, Phil Lumbeyer, the club's groundsman, having arranged a patent scare business at each trap which drove the birds from the traps like shot out of a gun. How the apparatus works and what it is made of is something Phil doesn't want mentioned until he has got it in full working order. It is sufficient to say that it has radically changed the quality of the Carteret birds; 98 to 97 scores will be scarce when Phil and his "scare-ups" are getting in their work. During the second match, the score of which is given below, the joint score of 47 made by Money and Page out of the first 50 birds was little less than phenomenal, when the way in which the birds left the traps, in addition to the wretched light which prevailed, is taken into consideration.



Capt. Money was first on the ground and shot about ten birds for practice; at least half of them got away, the Captain being apparently clean off his form. This, perhaps, was hardly to be wondered at as he had spent the whole of the previous day tramping up, down and over some of the toughest mountains in New Jersey in pursuit of ruffed grouse. The result of such violent exertion, added to a heavy cold, is hardly calculated to insure accuracy and quickness at the traps the succeeding day. Mr. Page, accompanied by the referee, John S. Hoey, arrived just as the Captain shot his last bye bird. Before Mr. Page went out to shoot a few pigeons for practice the referee and the two shooters got together and made the following arrangements: If the rain came down so hard that, in the opinion of the referee, it was not fit weather to shoot pigeons, it was in the power of the referee to call the shoot off for that day; if the match was more than half over when called off, it was to be shot out at some future date to be mutually agreed upon; if it was not half over it was to be called off entirely and to be shot *de novo* on a day that would be mutually agreeable.

In his practice birds Page showed but little improvement over Capt. Money's form, two or three birds getting away from him. Then the match began. Each killed 7 straight before a miss was recorded; Capt. Money's 8th bird, a dark blue driver from No. 2 trap carrying his load of lead over the left field fence. Page missed his 11th and 14th birds in this series, the scores at the end of the first 25 standing 24 to 23 in favor of Capt. Money. The 30th round saw them level, the Captain dropping his 26th, 28th and 30th birds (28th dead out of bounds), and Page letting his 26th and 28th (the latter also dead out of bounds) get away from him. On the 31st round an incident occurred which showed how important it is to appoint an official scorer for any match at live birds or targets. Phil, of course, was keeping the club's score while he also performed double duty as trap-puller; this is what Phil always does, so that he was not hampered by any extra work. Forest and Stream's representative was also keeping tab of everything, traps pulled, flight of birds and first and second barrel kills. As the match progressed from the 30th up to the 50th round both contestants were frequently informed on inquiry how they stood. At the end of the 50th round Forest and Stream's score, as it then stood, showed Money 41, Page 42. Phil's made them even up with 42 apiece. An examination of the scores proved that Phil had credited Capt. Money with a single barrel kill for his 31st bird, whereas Forest and Stream's score showed a cipher. Which was the official score? It was decided to shoot on and finish the match, leaving the question of that miss or kill to be decided later.

In the next 25 Page killed 20 to Money's 19, the bad light, fast falling rain and wonderful quality of the birds making those scores really far better than they appear on paper. Money missed his 76th, while Page killed, making the latter three ahead by Forest and Stream's score, but one less according to the club's score, 24 birds remaining to be shot at. As Capt. Money had come totally unprepared for such a downpour, and had a long ride home in wet clothes before him, Referee Hoey called the match off for the day, Page finishing with a run of 14 straight kills. It was agreed that the match should be shot out on the morning of Dec. 19, prior to the second contest for the President's cup on the same grounds. Scores in detail:

Match, Money vs. Page, 100 live birds per man, 29yds. rise, 50yds. boundary, Carteret Club rules to govern:

*Trap score type—Copyright 1894, by Forest and Stream Publishing Co.*

The traps drawn by each party were as follows:

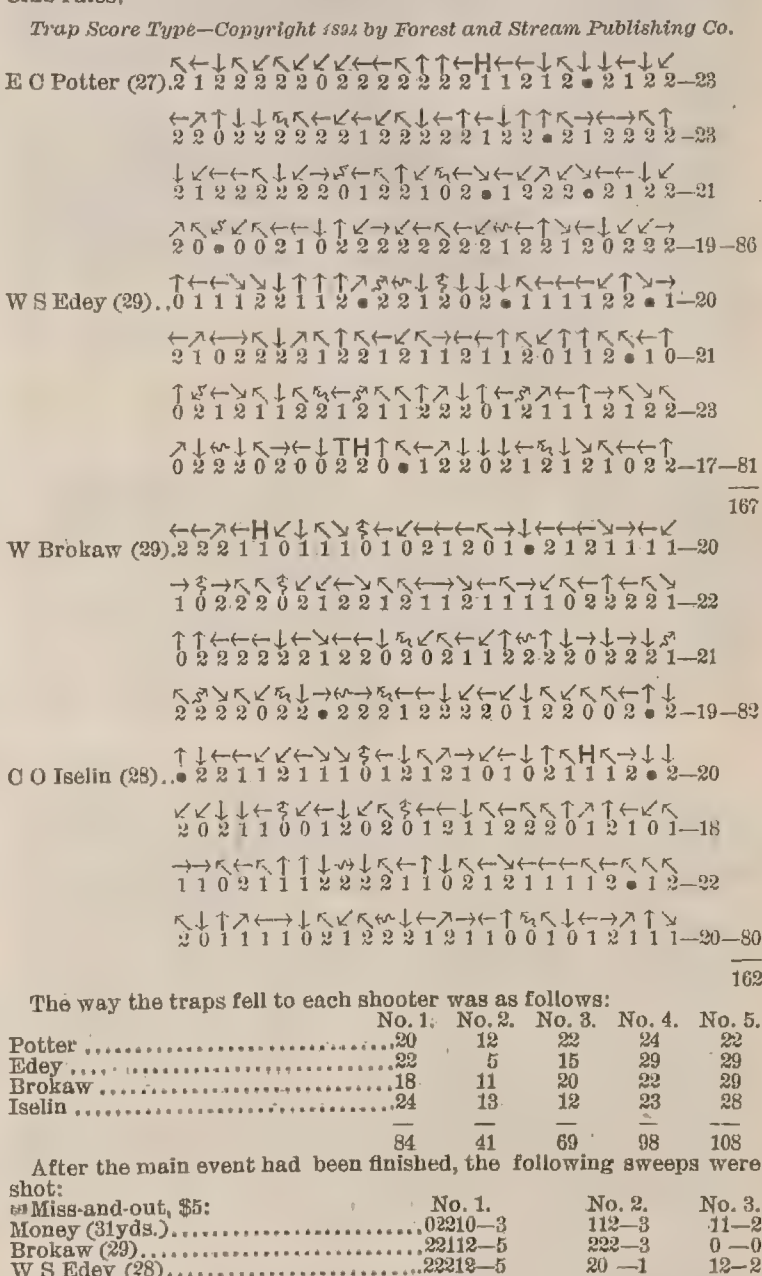
| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. |
|---|---|---|---|---|---|
| Capt. Money | 15 | 15 | 14 | 13 | 19 |
| J Seaver Page | 10 | 12 | 17 | 13 | 24 |

Capt Money misssed 6 from No. 5, 4 from No. 2, 3 from No. 1, 2 from No. 4 and 1 from No. 3; Mr. Page missed 4 from No. 3, 3 each from Nos. 1 and 2, 2 from No 5 and 1 from No. 4.

## Good Race at the Country Club.

E. C. Potter and W. S. Edey shot a match on Thursday, Dec. 6, with W. J. Brokaw and C. Oliver Iselin, at Westchester, N. Y., and won by 5 birds. Such would be one way of telling the story of a really interesting shoot, but the race itself deserves a good deal more. Matches for a good round sum are a rarity nowadays, and when it is certain that both sides are shooting a square up and-up race, the fact that there is a little money on the result gives an additional spice to the excitement. At one time, it is true, the race was a regular procession, but things changed rapidly toward the end. An offer of 10 to 1 on Potter's side would not have been looked at when the 70th round was complete; Edey and Potter were then leading by 7 birds, and it looked a perfect gastight cinch for them. When 91 birds had been shot at the scores were even with but 18 more birds a side to be shot at. Anybody's race and a tight finish. Brokaw's side, however, then fell away badly, losing 7 birds to their opponents' 2, and the match in consequence by 5 birds. It must be said in extenuation that, though both Brokaw and Iselin each missed 2 birds that they ought certainly to have gotten, the luck of the birds in that last 18 lay with Potter and Edey. How the race varied during each series of 10 is shown by the following figures: At the end of the 10th round, Potter's side led by 1 bird; 20th by 4, 30th by 3, 40th by 8, 50th by 7, 60th by 8, 70th by 7, 80th by 4, 90th by 1, 100th by 5 birds. At no one stage of the match was Brokaw's side in the lead.

Potter's shooting was a revelation to his friends. On a recent occasion he scored 86 on the same grounds, being one below the record for the Country Club, 87 having been made but once, Capt. A. W. Money holding the record. Potter started well on his two first strings, scoring 46 out of 50. In his next 25 he lost four birds, two of them dead just out of bounds. This gave him 67 out of 75, almost a 90 per cent. gait. At the commencement of his next 25 he opened a new box of shells and missed 4 straight; changing to another box he missed but 2 out of the next 20, finishing again with 86. He laid the blame for his four misses on those shells, and it must be said that a more wretched-looking crimp was never put on any shell; some had practically no crimp at all. Whether they were at fault or not, the startling reversal of form was remarkable. All through the match he did some wonderful work with his second barrel, particularly early in the race. Time after time he completely threw away his first shell, but his handicap of 27yds. enabled him to plant his second shell with deadly effect. His partner, W. S. Edey, shot a good race, but drew a remarkable number of outside traps; No. 4, a hard trap for a right-handed man, also fell to him nine more times than an average would warrant. His run on Nos. 4 and 5 in in his first 30 birds was extraordinary. No. 5 went 16 times, and No. 4 was pulled 9 times out of those 30 birds, *i. e.*, a total of 25 out of 30 for two traps alone, and those admittedly the most difficult for a right hand man to swing on to. The fact that during the whole match Nos. 4 and 5 were pulled no less than 206 times out of a possible 400 makes it look as if there was something out of gear in the pulling apparatus. No. 2 was pulled but 41 times during the whole match.



Messrs. Brokaw and Iselin may lay their defeat to incomers which were shot behind time after time; Brokaw let 7 get past him, while Iselin scored 11 ciphers on incoming birds; they thus handicapped themselves too heavily with the result as above stated. At times both Brokaw and his partner, who were the favorites undoubtedly at the start, shot brilliantly, but both appeared to change their time too often. Iselin shot the best in the last half of the match, scoring 42 to the 40 made by each of the other shooters. Capt. Money handled Brokaw, while Mr. Camacho looked after Iselin; the winners looked after their own interests. John S. Hoey, of course, was the referee, and that his decisions went without a kick needs no remark. There was, however, but one point with any degree of knottiness for him to decide and that was on Brokaw's 83d bird; it fell inside the wire fence that marks the boundary, but managed to flop over through poor work of the setter that was doing the retrieving; a good sharp dog would undoubtedly have gathered the bird, but this dog, through over-anxiety, it may be, fell all over the bird and himself two or three times. Referee Hoey decided that the bird had not been at any time in the dog's mouth. His decision was apparently a proper one and very fortunately did not alter the final result.

The weather was almost all that could be desired, needing nothing to make it perfect save a little more breeze from the northwest. At the early hour at which the match started the glare of the sun on the waters of the Sound made birds from Nos. 4 and 5 traps extra hard to kill. There is a great similarity between the grounds at the Country Club and those at Monaco, where the waters of the Mediterranean practically form the boundary; at Monaco there is more of a bluff than there is at the Country Club's ground on Long Island Sound, otherwise the resemblance is remarkable. As for the birds trapped during the match, they varied very much, but on the whole they were an extra good lot.

The most interesting feature of the whole match is one that should be an encouragement to every shooter never to say "die." Twice were Brokaw and Iselin 9 birds behind, yet when each side had shot at 182 birds, the score was a tie! The time occupied by the match was just four hours and five minutes. It commenced at 9:45, the first hundred being trapped in 63 minutes; the second hundred in 58 minutes; third hundred in 64 minutes, and the fourth hundred in exactly 60 minutes, the match being over by 1:50. Those figures show how promptly each man stepped to the score and how well and quickly trappers and dogs did their work. The traps, of course, worked to perfection, and only five no-birds were called, while scarcely a dozen out of the whole 400 lingered an instant after the traps were pulled. Scores in detail:

Match, 200 birds a side, handicap rise, 50yds. boundary, Country Club rules:

*Trap Score Type—Copyright 1894 by Forest and Stream Publishing Co.*

The way the traps fell to each shooter was as follows:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. |
|---|---|---|---|---|---|
| Potter | 20 | 12 | 22 | 24 | 22 |
| Edey | 22 | 5 | 15 | 29 | 29 |
| Brokaw | 18 | 11 | 20 | 22 | 29 |
| Iselin | 24 | 13 | 12 | 23 | 28 |
| | 84 | 41 | 69 | 98 | 108 |

After the main event had been finished, the following sweeps were shot:

| Miss-and-out, $5: | No. 1. | No. 2. | No. 3. |
|---|---|---|---|
| Money (31yds.) | 02210—3 | 112—3 | 11—2 |
| Brokaw (29) | 22112—5 | 222—3 | 0 —0 |
| W S Edey (28) | 22212—5 | 20 —1 | 12—2 |
| Potter (27) | 0211w— | 20 —1 | |

## The Riverton Plate.

The sixteenth contest for the Riverton Plate came off on Thursday, Dec. 6, T. S. Dando, of Philadelphia, being the challenger. Welch won his last victory with consummate ease, although he shot a gait that would not qualify him as a third-rater. As a matter of fact, there are no amateurs of the present day who could look on Welch as any sort of a cinch; on fast birds he is probably as good as any of them. Dando also is reckoned as a dangerous man on medium birds, but on this day he was clear off his form. At the commencement of the 23d round his score showed but 16 killed out of 22 shot at; a score low enough in all conscience. But Dando was apparently out for a record of some kind in these Riverton Plate matches. Missing his 23d bird, he followed it up by losing his 25th, 26th, 27th, 28th, 30th, 31st, 32d, 35th, 36th, 37th, 39th, 42d and 49th birds, finishing his first 50 with a score of 29! At one time he missed 10 out of 13 birds. Welch made one run of 22 straight and then immediately dropped four straight. It was a strange match, but at no time could it be called an interesting one, Welch winning in the end by 16 birds, with the score of 79 to 63. What makes these low scores still more remarkable is the fact that it is stated that the birds were by no means an extraordinary lot. F. Leonard was referee. Scores:

Welch vs. Dando, 100 live birds each, 30yds. rise, 50yds. boundary:

| | |
|---|---|
| R A Welch | 1100220222222202210001122—18 |

| | 0001202210212222022202222—18—63 |

Welch had 6 birds dead out of bounds, Dando 5.

## Coney Island Rod and Gun Club.

Dexter Park, L. I., Dec. 6.—The Coney Island Rod and Gun Club held its regular shoot yesterday afternoon, the main event being the contest for the Pfaender Badge. C. Plate, who stood at 26yds., won the badge by killing 10 straight; Lair, the runner up, killed 9 out of 10. John C. De Fraine was referee. Scores:

Pfaender Badge contest, 7 live birds, optional sweep, three moneys, class shooting, ties miss-and-out:

| | | | |
|---|---|---|---|
| *Dr Wynn (30yds.) | 2221212—7 | *Henry Miller (23) | 0211111—6 |
| William Lair (25) | 1211211—7 | Dr Littlefield (26) | 1012012—5 |
| C Plate (26) | 1121122—7 | A Rockefeller (25) | 0101112—5 |
| Wm Hughes (26) | 1111011—6 | D J Lynch (23) | 0221110—5 |
| Dr Van Ord (26) | 0221111—6 | C Engelbrecht (25) | 1000121—4 |
| James Voorhis (25) | 111111*—6 | | |

*Not members.

Plate won badge and first money on shoot off by killing 3 straight; second money was won by Hughes with 3 straight; third money was divided between Rockefeller and Lynch 9 straight, Littlefield dropping his 9th bird in the tie. Other sweeps were as follows:

No. 1, 3 birds, class shooting, ties miss-and-out:

| | | | | | |
|---|---|---|---|---|---|
| Plate | 222 | 12—7 | Voorhis | 110 | —2 |
| Lair | 211 | 11—7 | Lynch | 100 | 1 —2 |
| Engelbrecht | 112 | 10—6 | Van Ord | 200 | 0 —1 |
| Littlefield | 212 | 10—6 | Hughes | | |
| Wynn | 110 | —2 | | | |

A sweep at 6 birds with 4 entries was also shot; the winner being William Hughes who killed his 5 birds; the others, Lair and Rockefeller, each killed 4.

## Live Birds at Loudonville.

Loudonville, N. Y., Dec. 5.—The following are the scores made at the all-day shoot held here on Dec. 2, a brief mention of which was made in last week's issue of Forest and Stream:

| | No. 1, 5 birds, $2, 2 moneys. | No. 2, same. |
|---|---|---|

## Dropping for Place.

Weir City, Kan., Dec. 7.—*Editor Forest and Stream:* I had been wondering for some time why Mr. Hough's letter was allowed to go unchallenged, and was tempted at more than one time to express the same sentiments which were voiced by a communication in your issue of Nov. 24. On second thought, however, I concluded that the shooting territory of Kansas, Missouri and Arkansas, on which my knowledge of trap-shooting was founded, might not be the proper sphere in which to educate an amateur, and in which to put the *au revoir* touches to his knowledge of this most pleasing pastime.

My own observation and experience has taught me that hard times and lack of the almighty dollar on the part of the lovers of this sport, together with the large necessary expenses to be incurred by any one who visits as a shooter at any tournament, are the primary and pervading causes of trap-shooting not offering greater inducements to the average man as a means of recreation and enjoyment. Certainly there have been, and may yet be, practiced methods of chicanery by some unscrupulous shooters, which are detrimental to the sport, but in what line of outdoor amusements, all of which have so strong a hold on the American people, cannot the same be said? To brand trap-shooting as the "rottenest" outdoor amusement a man can indulge in is to defeat the very object which one would naturally suppose it is the desire of Mr. Hough to accomplish.

Such measures as those proposed by you will make it next to impossible for any shooter, whether professional or amateur, to get more than his just deserts from the purse in any event; and the object will have been accomplished without making every shooter in the land think that he is no longer a gentleman, but is rather the associate and patron of a set of thugs and thieves. The proper spirit of improvement is that taken by you. Correct the faults in the present system of trap-shooting by pointing them out in such a manner that shooters will be drawn to the support of one of our grandest amusements, rather than driven from it under the impression that gentlemen cannot afford to mingle with a crowd so devoid of honor and fairness.

The sport is expensive—necessarily so—but it is not degrading, as Mr. Hough's letter would lead a moralizer to believe; and for those who can afford it, the pastime is one which ranks second to none for clean sport and healthful results. Mamaluke.

J. E. A.—We never heard of an electric search light for jack-hunting.

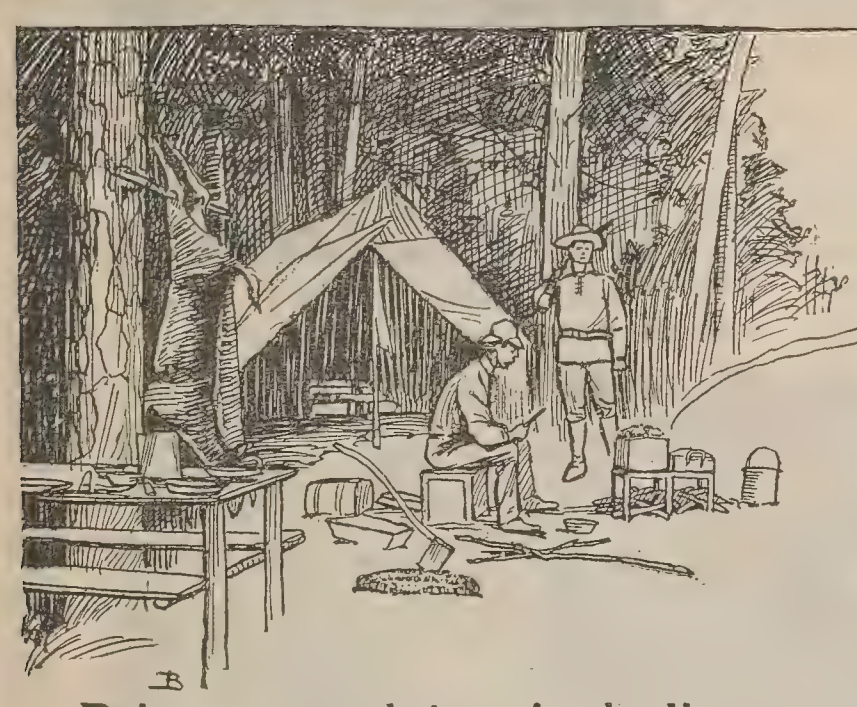
J. A. R., Philadelphia, Pa. Ans.—The company about which you write no longer exists.

J. E. B., St. Lambert, Me.—I have some canvas decoys that are oily and hard to dry from being in stock for some time. Will you tell me how to get them in shape again and how to paint them afresh? Ans. If sticky on the outside coat the decoys with shellac. If sticky on the inside pour through the valve a solution of paraffine dissolved in gasoline. The manufacturers will repaint, if necessary, for a small sum. The decoys should never be left in a hot place when packed.

J. C. C., New York.—1. Can a canoe 16×30 (cedar cruiser) be run by a small electric motor; also is such a canoe strong enough to be used as a rowboat by fitting adjustable outriggers to it, and how would it row? 2. Is there any place in Brooklyn or New York for testing the shooting qualities of new rifles, where the rifle can be placed in a vise and tested at different ranges, from 100ft. to 200yds.? Ans. 1. Such a canoe can be fitted with oars and rowed. Attempts have been made to run small boats by electric power, but they are as yet only experimental. 2. Yes; the American Testing Institution at Dexter Park, Brooklyn.

F. S. M., Brookline, Mass.—1. Are the smokeless powders as safe to use as the old black powders? 2. Have any accidents been due clearly and wholly to their use? 3. Can a gun be made by the average gunsmith in which these new explosives can be used with absolute safety? 4. Do or will the leading makers of guns in this country or in Europe guarantee their guns to shoot these new explosives safely? Ans. 1. Relatively speaking, no. Nitros are more violent in their action and require stronger guns than black powder. 2. Yes, but generally through some error in loading. 3. Yes. 4. Yes; all the leading gunmakers guarantee their guns for nitros.

Subscriber, Vernon, Texas.—1. Is it damaging to a rifle to shoot shot cartridges from it? 2. My shotgun cannot be unbreeched until after the locks are cocked. In putting away my gun for a week, or for the summer, should I leave it cocked in the case, or should the locks be "snapped" down, thus relieving the tension on the main spring. It seems to me that snapping it with nothing to stay the strikers would be damaging. Ans. 1. The rifle will be leaded and injured for shooting with ball. No rifle will shoot shot well as the rifling operates to scatter the charge. Rifles intended for such shooting should be bored smooth. 2. When putting your gun away for any length of time the tension on the main spring should be relieved. It would not probably hurt the gun to snap the hammer; or you might put in shells that have already been shot.



Enquirer, Fort Sherman, Idaho.—1. Is it safe to shoot buckshot from a choke-bore gun, the shells loaded with 3½drs. black powder and nine shot, disposed in three layers, three shot to the layer, the pellets being of such size as to chamber in the choked muzzle, the whole charge being imbedded in cosmoline, the point of liquefaction of which is about 120° F.; no wad over the shot; is being retained in position by the congealed cosmoline? 2. If the above be unsafe would placing a cardboard wad between each layer of shot, the loading remaining the same in other respects, render it safe? 3. Would you consider it safe to use Schultze or other standard nitro powder with shells loaded as to shot as above indicated? 4. To secure an open pattern with a choke-bore gun, using nitro powders, are the methods recommended by Greener for use with black powder, safe? The methods alluded to are (a) dividing the charge of shot into sections by means of cardboard wads; (b) using light wadding over the powder and heavy over the shot. 5. Are nitro powders safe to use with ball in shotguns, admitting that ball may be safely so used with black powder? 6. Where can I get Armin Tenner's reports on powder tests? Ans. 1. Yes. 2. Placing cardboard wads between each layer of shot would only have the effect of opening the pattern. 3. It is frequently done. 4. Yes. 5. It is done. 6. The articles were published in the numbers of Forest and Stream for Dec. 2, 9, 16 and 23, 1893.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

A magnificently illustrated volume descriptive of fly-fishing for trout and salmon. By Edward A. Samuels. Cloth. Price, $5.00.
FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.

# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

## AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** *6 months and any two pictures*, **$3.**

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

## Lancaster's Famous Book,

# THE ART OF SHOOTING.

**By CHARLES LANCASTER.**

**AUTHOR'S PREFACE.**

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

### *NEW JERSEY AND PENNSYLVANIA GAME ASSOCIATIONS.*

THE sportsmen of New Jersey, under the leadership of the New Brunswick Gun Club, have apparently awakened to the necessity of concerted and united action on their part if game birds and animals, scarce even now in many parts of the State, are to be preserved for the next generation. The organization of a permanent association under the title of the New Jersey Game and Fish Association is one step in the right direction. It should be remembered, however, that it is but one step, and that whole flights of stairs have yet to be climbed before the association, as a representative body, can begin to claim the attention of the State Legislature at Trenton.

New Jersey's sister State, Pennsylvania, offered four years ago a similar spectacle to that now afforded by New Jersey. Two years ago the efforts of the Pennsylvania State Sportsmen's Association, on behalf the better protection of the game of that State, failed, through lack of time, to obtain the desired legislation. Pennsylvania's legislators were many of them totally ignorant of the difference between a woodcock and a woodchuck; they were easily led in consequence, and lobbying being resorted to, some amendments were tacked on to the bill recommended by the legislative committee of the State Association that made it advisable to pigeonhole that document which once promised so well, rather than have it turned loose on a suffering commonwealth in the mutilated condition in which it left the House of Representatives. That was nearly two years ago.

Since then the State Association has strengthened its hands materially by adding many clubs and kindred organizations to its ranks. It has taken time by the forelock and has prepared a bill to be presented for the consideration of the next Legislature. This bill, which represents the wishes of the majority of the sportsmen of the Keystone State, will it is hoped, become a law before many months have passed. The legislative committee appointed at the Reading convention in '92; continued at the Harrisburg convention on Sept. 26, 1893; continued again and strengthened by the addition of new material, at the Altoona convention on August 21 of this year, has now in its hands something which should be accepted in the same spirit in which it is offered.

As in New Jersey, so in Pennsylvania, the open season for woodcock is the rock on which North and South have split. The arguments used at the New Brunswick convention on Saturday last were almost identical with those which have been used at every convention of the Pennsylvania Association since its inception. It is a good sign, however, when both sections begin to come together in regard to summer shooting. North Jersey is apparently willing to compromise on Oct. 15, as the date on which woodcock shooting should commence, not a day later. She argues, and it must be owned that she ought to know what she is talking about, that the November woodcock shooting in her counties is scarcely worth anything nine years out of ten.

The committee appointed by the New Brunswick convention to wait upon the Game and Fish Commissioners at their meeting in Trenton on Jan. 5 next, has no easy task before it. Whether it fail, if fail it should, in getting its wishes incorporated in the State laws this year, or whether it succeed, the need of concerted action on the part of New Jersey sportsmen is imperative. And such action can only be had from a State association organized on the lines of the New Jersey Game and Fish Association.

There is one point, and an important one, wherein the condition of New Jersey sportsmen is far better than that of their fellows in Pennsylvania. New Jersey has a game commission and her Legislature appropriates certain moneys to provide for the prosecution of those who break her game laws; Pennsylvania has none, and if her State Association can obtain merely that at Harrisburg during the coming session it will have made a great stride in the direction of the ultimate preservation and protection of the game of her fields and forests.

### *THE NEW YORK COMMISSION.*

OUR suggestions respecting the reorganization of the New York Fish Commission, by abolishiug the present board of politicians, jokers, frolic makers and incompetents, and putting in their place, a single, intelligent, capable commissioner, have been copied extensively by the press of the State. This indicates that the subject is one of interest to the public. It should be. The public pays tens of thousands of dollars annually for the maintenance of the work of the Commission. It has a right to demand and should demand that for the funds expended the largest possible returns should be insured. No matter how scrupulously honest and economical in intent may be the administration of the finances of the Commission, it stands to reason that they cannot be spent to good advantage if the Commissioners themselves are too ignorant or too indifferent to know what is to be done and how it should be accomplished.

---

The very first action that should be taken at Albany by the incoming Legislature in the interest of fishculture in New York is the adoption of a measure to provide a single-headed Commission. The next thing is the appointment to that office of an intelligent man, thoroughly versed in fishculture, interested in the work, and in every way equipped for the capable and efficient performance of his duties.

An admirable appointment would be that of Mr. A. N. Cheney, of Glens Falls. Mr. Cheney has made a lifelong study of fish, fishing and fishculture. In these fields he is the best informed man in this State, if not in this country outside of Washington. His information is varied, comprehensive, thorough and practical. It is information that might profitably be enlisted in the public service of the State of New York. To the duties of the office he would bring an enthusiasm for the cause, a large-minded grasp of its opportunities, and an intelligent and capable administration of the interests connected with it. With Mr. Cheney as the incumbent of the office, the New York Fish Commission might well have the unquestioning confidence and support of the people of the State, as it most certainly would have those of the National and the other State commissions.

### *THE PASSING OF THE ADIRONDACK GUIDE.*

EXCEPT for two isolated localities, the available supply of deer in New York State is in the Adirondack region. In Sullivan and Ulster counties a few deer exist; and a still smaller number on Long Island, but the average man does not care to visit this locality, and risk his life in a pursuit which promises no sport and a great deal of danger. It is to the Adirondacks that we must look for our local supply of deer to-day and in the near future. A time may come when by protection the deer in Sullivan and Ulster counties shall have so increased that their numbers may be worth considering, but that time does not seem near at hand.

It appears evident that, for the general public, the Adirondack deer supply cannot hold out much longer, unless more efficient protection is afforded them. They would long ago have been exterminated, if it were not for the large areas of private parks, where they do receive protection. The area available for hunting is constantly contracting, and the number of visiting hunters constantly increasing. The hunting is concentrated over the free territory. Deer are tracked, dogged and water-killed almost unceasingly all through the open season, and even at other times.

---

The private parks have preserved the deer, and the existence of these preserves makes hunting by the public more successful to-day than it was ten or fifteen years ago, but this formation of private parks, which increases the supply of deer, presages also the end of free hunting in the Adirondacks. With the end of free hunting, the guides who now make their living from hunters will lose their occupation, and as a class will disappear. Those still employed will become appendages to hotels, clubs and permanent camps, and will be much less numerous than they used to be. As time goes on and the subject of game protection is more and more agitated, other large areas of the Adirondacks will pass into the hands of clubs and associations, and there will be less and less opportunity for hunting by those who are not club members. Already vast tracts are closed to the public, who are not only forbidden to hunt on these lands but even to pass over them. As this state of things increases—as increase it must—the liberty of the public will be still further abridged, and with this curtailment of liberty we shall see the passing away of the old-time Adirondack guide.

It is evident that if there were a law for the Adirondacks that furnished protection to the deer, if the public believed that these animals were not in danger of extermination, the formation of the private parks would go on more slowly. Nowadays, men often join the associations as a matter of self-defense, so that they may be insured some hunting in the future, no matter what may happen in the free portion of the woods.

---

Among those best acquainted with the needs of the Adirondacks, and who look furthest into the future, there is a strong sentiment against the deer law as it stands to-day. A majority of the guides say that the present law is framed in the interest of the hotel keepers, who imagine that because the open season begins in August, many summer visitors, who would otherwise leave early in that month, will remain two or three weeks longer in the hope of killing a deer. The guides believe that the truth is that if the hunting began a month later, when the deer are in better condition, an entirely new class of visitors would come to the woods for hunting and that so the total number of visitors would be increased, with a corresponding profit to all who earn their livelihood by supplying the wants of the visitors. Sportsmen, as a rule, condemn the practice of water-killing deer, and would welcome a change in the law. Only the summer visitors and the hotel keepers are satisfied with the existing statute.

That a change is needed seems clear, and those who are interested are likely to move in the matter before long. The subject will probably be brought before the next Legislature for action.

### *THE REFORM OF TRAP-SHOOTING.*

THE letters, which we publish from week to week, advocating concerted action to control trap-shooting, show how very general is the interest in this subject. Any action taken must originate with the trap-shooters—that is with the men who are most interested in keeping the sport up to a level where all can take part in it—but it should not be confined to them. Every man who uses a gun, whether he shoots at the trap or not, ought to feel an interest in keeping all departments of this sport free from taint or stain, and ought to use his influence in behalf of honest shooting.

Besides this, the various trades are interested and will desire to do their part to purify the sport. The principal manufacturers of shooters' supplies have traveling representatives at tournaments, to show their goods to shooters and to prove their excellence by taking part in the contests at the trap. Such representatives are the most faithful attendants at all shoots; they are usually men of agreeable personality, and among them are some of the very best shots in the land. For these and other reasons they are of great influence in the trap-shooting world. Their words and actions carry weight.

Most of them, no doubt, are honest shooters, but some are open to the suspicion of now and then dropping for place. The truth is that the whole atmosphere of trap-shooting tournaments has become so vitiated that the moral sense of the most honest man may become hardened, and he may now view with indifference acts that a few years ago he would have roundly condemned.

The shooting of these traveling men can readily enough be regulated by their employers, and if it were an understood thing that they would shoot honestly, their conduct, backed by public opinion, would no doubt put an end to the crooked practices so much deplored. If the manufacturers will give strict orders to their representatives that they must shoot honestly—doing the best they can—and that anything in the nature of dropping for place, if proved against the representative, will be followed by instant discharge, the results to shooting will be very good, and the influence of such an order will be seen at once.

Such action would be much more far-reaching than its influence on individual representatives of each concern. It would distinctly show the trap-shooting public that the manufacturers stand, as unquestionably they do stand, in favor of decent, manly sport. With the trade and the general public in favor of honest shooting, the crooked men will have to move to the rear.

# For Christmas Reading.

## CHARADE.

My first and last together make
The ribboned steel that binds the world,
My first alone your thirst can slake
From hissing urn with steam upcurled.
My second is a little bird
That flutters from the reeds and grass.
My whole compressed in one short word,
Can climb the dizziest mountain pass.

H. G. Dulog

## KELSY AND THE SHERIFF.

Uncle Jerry and I were pushing through the yellow branches and white stems of second growth bushes in the supposed line of flight of three partridges that had gone booming away unseen toward the rocky steeps of Shellhouse Mountain.

Presently we came upon a gnarled and decayed old apple tree, its hollow trunk knee-deep in yellow and brown ferns that filled the space which the shade of the dense branches had kept clear of woody undergrowth, while they held off at arm's length the intruding ranks of birches. Evidently it was not originally a wild apple tree, chance sown by bird or beast, for there were hollow stumps of great limbs that though overgrown with lichened bark, around the black cavity still showed that they had been cut close and square by the pruner's saw, and among the diminutive, pale yellow fruit that lightly burdened the crowded, interwoven sprouts matted with dead leaves and twigs, one half-decayed branch struggled upward to display a few fair, red apples to prove the skill of some forgotten grafter.

If further evidence was needed that this was the survivor of an orchard or perhaps one cherished fruit-bearer of a home that it far outlived, it was given by an adjacent cellar, a mere shallow pit, with grass-grown sides brimful of rank golden rods and asters.

The sodded dry bank offered a pleasand seat, for it lay in the full sunshine, while there was a creeping autumnal chill in the shade not inviting one to long rest therein.

"I guess them pa'tridges has gone clean on t' the hill," said Uncle Jerry, speaking aloud for the first time since we began our quest, "an' I believe we'd orter seddaown here an' hev a smwuk."

Taking a step down, he seated himself on the bank, and laying his single-barreled gun conveniently across his knees, began filling his pipe from a heart-case of long-cut tobacco.

I had not outgrown the youthful desire of the race to taste the fruit of every strange tree, and my lips were puckered over my latest acquisition of useful knowledge, so that I did not open them to ask for more, till I was seated beside my old friend and a whiff of smoke had loosened my tongue.

"Who ever lived here, Uncle Jerry?"

He picked up a broken brick and turned it slowly beneath his meditative eyes as if its blackened surface might give some clue to the moldered hands that kindled fires on a hearth long since cold and forgotten. After much thoughtful contemplation, he laid the brick beside him and answered:

"I ruther guess it must ha' been ol' Kelsy."

"Do you remember him?"

"Good land, no. He was gone furder'n the smoke of his own chimbly 'fore my day. But I've hearn my father tell on him an' haow he got treed."

"How was it?" I asked, pricking my ears for a thrilling tale of wild beasts.

Uncle Jerry took up the brick again, as if its touch might aid his recollection, passing it from hand to hand, with his elbows resting on his knees, like a shuttle that wove the thread of his story.

---

"Wal, ye see, the way on't was, ol' Kelsy bargained for a piece o' land here, an' put him up a lawg haouse, right here where we're settin', proberbly."

He dug away the thin soil with a corner of the brick and disclosed the red dust of the dead and buried house.

"He an' his ol' womern lived here quite a spell, long 'nough for him to git in debt to ev'ybody within a mild o' here. I do' know what possessed anybody to make a pitch here; the sile ain't much to brag on, an' it was a lunsome place even for them days—no neighbor nigher 'n Shellhaouse, a mile off, but there was lots an' sacks o' game all raoun', an' traout in the brook over there, so I've hearn tell, an' I've seen minnies in 't myself, not thirty year ago. Wal, bimeby, some o' them 'at he owed got sick o' waitin' an' made up the' minds 'at he wa'n't makin' no cal'lation on payin' nobody, so they hed the papers made aout to jail him; they useter jail folks for debt them times, ye know, an' they started the sheriff off arter him. Ol' Kelsy sot eatin' his breakfus, an' happenin' to look aouten the winder, he seen the sheriff clust on't the haouse. He knowed what was up the minute he seen him, an' he jumped up an' grabbed a hunk o' col' johnnycake off 'm the table an' cut aou' door, pocketin' it as he run, an' int' the woods quicker 'n scat, an' the sheriff arter him, an' it was nip an' tuck fer a few minutes, but Kelsy was tew spry fer him, fer he was a leetle, cat-hammed, wiry feller, an' the sheriff was a re'lar lummux 'at weighed tew hunded an' a quarter, so when Kelsy got start enough he jest shinned up a tollable-sized hemlock tree an' hid in the branches, thinkin' the sheriff hadn't seen him gwup. But he hed, an' pooty soon he come saounderin' up to the foot on't a-smilin' up at Kelsy like a basket o' chips.

"'Good mornin', Mr. Kelsy,' says he.

"'The top o' the mornin' tu ye, Mr. Tucker, an' that's what I've got up here,' says Kelsy.

"'Won't you jest step daown here a minute, Mr. Kelsy, I wanter see ye?'

"'If you wanter see me wuss 'n I du you, you c'n step up here,' says Kelsy.

"'O, come naow, what's the use o' foolin'?' says the Sheriff. 'I got papers tu sarve on ye.'

"'What's the use o your foolin'? Sarve 'em, why don't ye?' says Kelsy.

"'Wal, I will when you come daown, an' I'm goin' tu stay till you du,' says Tucker.

"'When I du, you sarve 'em,' says Kelsy; an' he lit his pipe wi' a flint an' steel an' some punk, an' begun smokin' as comf'table as you please, an' Tucker, he looked up a good spot an' daown he sot.

"'I guess I c'n stan' it tu set here as long as you can up there,' says he; an' he took aout his pipe an' he begin tu smoke, tu.

"'Mebby,' says Kelsy; an' he fixed himself comf'table on a big limb, with his back again the body of the tree, an' then thinkin' he might 's well improve the time bein' socierable, says he, 'Haow's yer fwolks, Mister Tucker?'

"'They're tollable well. Yourn is, I s'pose? I didn't seem to hev time to stop an' inquire abaout Mis' Kelsy's health when I was passin' the haouse.'

"'No, you didn't sca'cely seem to,' says Kelsy, laughin'. 'Yes, she's consid'able kinder middlin' 'ceptin' rheumatiz.'

"'She got rheumatiz?' says the sheriff. 'Wal, naow I'll tell ye what she wants tu take fer them. You take an' dig a good ha'f'l o' bloodrut an' put it intu a pint o' rum, an' hev her take a spoonful on 't three times a day. It'll knock the rheumatiz higher 'n Gilderoy's kite.'

"'You don't say. But seems 'ough so much bloodrut 'ould spile a pint o' good rum. Haow 'ould it du tu eat the bloodrut an' drink the rum 'long between bites, er haow 'ould it du for the ol' woman tu chaw the bloodrut an' me drink the rum?'

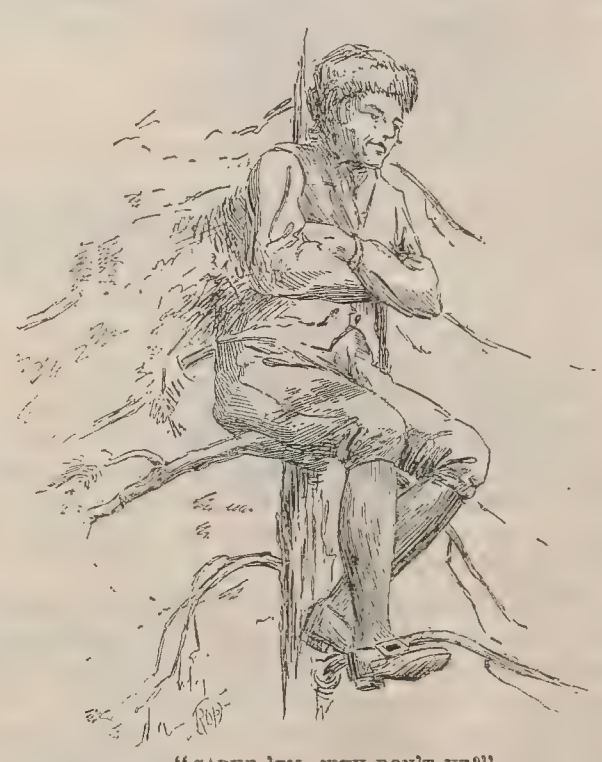
"'Jest as you an' her c'n agree,' says Tucker. Says he,

"SEATED BY MY OLD FRIEND."

'It was a High Jarmany Indian darcter tol' Amasy Baker on 't, an' it cured his rheumatiz, an' he tol' me. You've got it as cheap as I did.'

"'Any news wuth tellin'?' Kelsy ast, changin' the subjeck; for he begin tu git dry talkin' o' spirits.

"'I do' know as the' is, nothin' pertic'lar,' says Tucker, considerin' an' chawin' a goold thread rut; for he was beginnin' tu spit cotton, tu.



"'Be you goin' tu run fer sheriff agin this fall?' Kelsy ast, an' Tucker pricked up his ears an' sot up, considerable interested an' says,' 'I be if the folks is satisfied with the way I've done business an' wantu keep me in the office. I hope you haint layin' up nothin' agin me fer a-duin' of my duty, Mr. Kelsy, but 'll vote fer me just the same as if I hedn't ben 'bliged tu take ye?'

"'Not if I'm in jail I shan't vote fer you'

"'O, sho, you'll be out 'fore 'lection er anyways you'll be on the limits!'

"'Wal,' says Kelsy, 'I haint in yit an' I haint no notiern o' bein' hove in, not 'fore 'lection. If you'll go off int' woods an' stay an hour, I'll vote fer ye.'

"'Do you s'pose I'd shirk my duty that sorter way?' said the sheriff stan'in' up an' speakin' turrible indignant, 'no sir, but I'll tell you what I'm goin' tu du. I'm comin'

"SARVE 'EM, WHY DON'T YE?"

right up there an' pull you daown by the laigs', an' he begin to pull off his cut an' spit on his han's.

"'If you come here, I 'spect I'll be 'bleeged tu kick a hole in the top o' yonr head,' says Kelsey, 's cool as a caowcumber ,an' Tucker put on his cut an' sot daown agin.

"'Wal, I'll git yer axe an' chop ye daown,' says he arter a spell.

"'Wal, yes, you go an' git the axe,' says Kelsy, snickerin' right aout.

"'You'll hafter come daown sometime an' git somethin' to eat. It's gittin' towards noon an' I'm hungry myself. Come, what's the use o' foolin'? Come along daown an' we'll gwup tu the haouse an' git us suthin tu eat an' go 'long peaceable an' friendly.'

"'Thank you', says Kelsy, 'I've got suthin' tu eat', an' he hauled aout his johnnycake an' begin eatin'. You orter fetched a bite in your pocket. There haint a thing t' eat in the haouse but taters an' I was jest a goin' off arter some necessaries when you come an' upset all my cal'lations.'

"'Wal,' says the sheriff, 'ef you feel any 's I do you mus' be a-gittin' some dry. Come daown an' go 'long wi' me an' when we git tu Tupper's we'll have us suthin' tu take. Come naow.'

"'You talk temptin',' says Kelsy, 'but I know where there's a quart o' good rum nigher 'n Tupper's, an' if you're a min' tu be reasonable we c'n ha' some.'

"Tucker looked up kinder wishful and Kelsy went on explainin'. 'If you'll promise me, honor bright, to drink fair an' pass it up to me in a way I'll pervide I'll hev us a bottle 'o rum in less 'n no time!'

"'I will,' says Tucker, 'Hope to die if I don't, fer I'm drier 'n a graven image.'

"An' then Kelsy begin tu holler like a loon. 'Lyddee, Lyddee,' tu his ol' womern, an' she answered, an' he tol' her tu fetch the bottle o' rum, an' she did, an' he tol' the sheriff tu take a drink, which he did, an' meanwhile Kelsy was onwindin' a fishline 't he hed in his pocket, he most allers hed one, an' lettin' on 't daown through the branches, an' then he tol' his ol' womern tu hitch the bottle ontu it, which she did, an' he hauled it up an' took a snort that was turrible comfortin', fer he'd got pretty dry a-roostin' up in a tree, goin' on three hours. Pretty soon he took another tu make sure on 't an' then he let daown the bottle tu the sheriff an' says:

"'Drink hearty, for you haint got nothin' 't eat.' An' he did, for he was a thirsty crutter, an' not havin' nothin' tu eat since airly in the mornin' it took rank hol' on him an' it wa'n't long afore he was happy as a king. He tol' Kelsy stories and sung him songs an' says he, 'I never has sho mush fun takin' prishners sin' I hel' er offish. Shing shong, an' I'll taker ten stepsh.'

"An' Kelsy begin tu sing 'Hey Betty Martin, tip-toe fine,' an' Tucker flopped around a-takin' his ten steps like a frozen-footed ruster, till bimeby he stubbed his toe er tangled up his laigs an' daown he went kerflop, an' Kelsy sung aout 'You 've took 'em an' more tu!'

"Kelsy's womern kinder hung raound a spell till she seen haow the ol' man's medicine was a workin' an' then she suddenly scuttled off tu the haouse wi' the corner of her apron stuffed intu her mouth tu smudder her laughin.'

"'Tucker hung ont' the weeds an' grass tu keep from fallin' up, an' Kelsy was cocksure he was gettin' a leetle over the dam, when he went off saound asleep as a lawg, a snorin' like a blacksmith's bulluses. Kelsy hove daown a sliver o' bark an' it hit him right in the face, but he never stirred; an' so Kelsy come shinnin' daown, an' satisfied himself 'at Mr. Officer hed outlived his usef'lness fur a spell, an' he picked up the bottle 'at was wuth savin' for what was left in it, an' puther fer the haouse, an' there was lively times fer about an haour wi' him an' his ol' womern a pickin' up the' duds.

"When Tucker 'd slep' off the liquor, it was gettin' consid'able darkish in the woods an' the August pipers was tunin' up an' a hoot aowl a-hootin' up on the maountain, an' he couldn't think fer a minute where he was, er haow he come there. Then he sot up an' suthin' slid offem his breast ontu his lap. It was a gret hunk o' col' johnnycake 'at ol' Kelsy 'd put there the last thing, an' then it come tu him where he was an' what fetched him there, an' he got up an' went slyin' up tu the haouse.

"But there wa'n't no danger o' his 'larmin' nobody, fer when he shoved open the door the place was as empty as a contribution box 'cept the fillin' o' a straw bed scattered abaout on the floor, an' there wa'n't a sound in 't but a maouse a-squddlin' 'mongst the straw, an' the las' dyin' snappin' of the burnt aout fire on the hearth.

"'By gosh,' says Tucker arter gawpin' an' hearkin' abaout five minutes 'thout takin' a breath, 'He's gone, hook an' line, bob an' sinker! An' I'd orter hev a guardeen!' An' he didn't git the 'lection that fall."

As Uncle Jerry finished his story, he pitched the broken brick in the bushes in front of us beyond the cellar, having no further use for it.

There was a startled *kerrrr-quit, quit*, and a ruffed grouse shot up like a rocket through the tangled briers and almost as soon as seen vanished among the yellow birch leaves that swayed and tossed in the wind of his impetuous flight.

An abashed smile began stealing over the blankness of the old man's gaping face as he turned it slowly toward me, and said, "Wal, he fooled us, an' went julluk ol' Kelsy!"

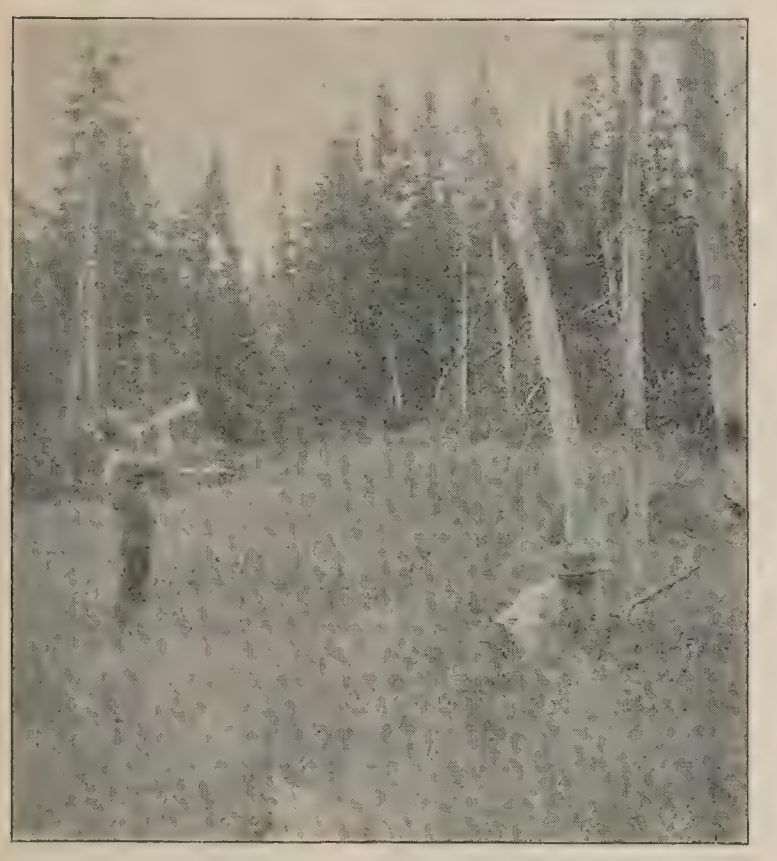
Rowland E. Robinson.

## MOOSE AND CARIBOU.

Fifty miles almost due north of Boisetown is Little Sou'west Miramichi Lake, in which locality are the best moose and caribou grounds in New Brunswick. Within a radius of twenty miles of the lake are hundreds of other lakes, big and little, many of them nameless and not traced upon any map of the country. It is a great timber region, but there are parts of it in which the sound of the chopper's axe has never yet been heard. On every side are hills and mountains of considerable height, which form the watershed of the Little Sou'west, Dungarvon, Renous, Clearwater and Rocky Brook to the south and east, and to the west of the waters of the Tobique.

The reigning monarch of this game paradise is Henry Braithwaite, the finest all-round guide and woodsman that ever wore a moose shank. For a quarter of a century he has trapped and hunted over it for bear, moose, caribou and all the small fur-bearing animals. He has a line of traps stretching over about seventy miles of ground, along which his camps or cabins are located at convenient intervals. His trapping is done chiefly in the winter when all this region is a silent waste of snow. Of recent years he has in the autumn taken several moose-hunting parties in upon these grounds, and has never failed to show them the living target. As a moose-caller he has no rival. Unlike the Indian guides he calls only in the daytime, when the game is plainly to be seen, and no one who has had the good fortune to see the consummate skill and patience with which he coaxes a wary old bull to his doom will ever forget the experience. When the marksman is the victim of buck fever, it is only by calling the game within very close range that the death-shot can be given.

The woods of Maine, New Brunswick and Nova Scotia are full of guides (so-called) who make a bluff at calling moose. The genuine artist who can really fool the old fellow into the notion that he hears the voice of his lady love is a very rare bird indeed. In the mating season a bull moose is readily excited by unusual scents or sounds and he is liable to investigate. He is intolerant of the presence of man but not much afraid of him. He will follow upon the trail of the hunter, or he will come to the camp to see what all the racket is about anyhow, and now and then he will plant himself in the road and dispute the right of way. Old Peter Gray, an Indian caller of the usual sort, expressed the whole thing in a nutshell. Being asked if he could call moose he replied, "Sartin, me call moose. Call um all m' lifetime. Sartin never come yet. Sposen a lot come when do come."



To shoot a bull moose, even in this favored region, and with Braithwaite as your guide, is a job of some magnitude. A deal of time is required to get there and get out again. A deal of calling is going to be done at the wrong time and the wrong place. There will be rainy days and windy days. There will be the moose that is too young to come to the horn and the moose that is too old to come to the horn. There will be the cow moose to which you and your horn are a matter of supreme indifference, and which you are not allowed to shoot anyway. Then again, there is no animal in all the wide world that displays such a positive genius for turning up at the identical spot where he is not wanted as a bull moose. Lastly, when he is shot he will lug off an amazing lot of lead. It will take three bullets to stop him in October where one will do it in March.

We boarded the accommodation at Fredericton, Mr. Fred. Irland, of Washington, and myself, and at Cross Creek were joined by Braithwaite, the guide, and Jack Best, the cook. We lost no time in pledging the health of the Little Sou'west Dead Meat Co. (Limited). At Boiestown we left the train and had our luggage and ourselves hauled about eight miles over to Pleasant Ridge. It was then late in the afternoon, and as for some good reason of his own, our host had failed to notify the "portasher" of our coming, it was impossible to make a start before morning, whereupon we quoted a few familiar scraps of Hebrew and tumbled into bed.

Bright and early in the morning came our "portasher" with his team. Henry called him Laziboo. He was an old and apparently feeble man, but was reckoned the best "portasher" in the settlement. For half a century at least Laziboo had been battling with the roots, rocks, blowdowns and quagmires of the "portash." Day or night, rain or shine, he would drive her through somehow, even if he had to swear her through.

"Come hyar, Madge, you dod-rot, flammergasted ole galvanized bear." This was one of Laziboo's very mildest.

At 7 o'clock Laziboo swore the harness on the horses and we started for the woods. After a haul of two miles we reached the last clearing, and Laziboo exchanged his hayrack wagon for a sled with wooden shoes. Fred named it the bull moose express.

"WOULD THAT I COULD DESCRIBE THAT CALL."

I will not consume the valuable space of FOREST AND STREAM nor the credulity of its readers in trying to describe what a "portash" road through the Canadian lumber woods in the fall of the year is really like. At times the bull moose express appeared to be heading for the sky; at times it was diving for the lower regions. It would slide upon one runner for a spell, and then it would lurch over and come down with a crash and bang that could be heard a mile away. Over stumps and roots and rocks it would grind and groan, and then it would sail serenely on an even keel through a sea of inky muck. And all the while Laziboo plodding behind with his gad and swearing her through till all was blue.

Now and then a blowdown had to be cut out of the road, and to see the white chips flying in volleys from the axes of Henry and Jack was a sight to be remembered. Fred and I walked ahead of the team as a rule, much to the detriment of *Tetrao umbellus*. We saw no large flocks—in fact this was our experience on the entire trip—but those we saw were very tame and we always had enough to flavor the pan.

Only fifteen miles were made that day as the load was a heavy one. Our tent was pitched at the Indian Village, so-called from the black stumps that stand there like ghosts in the moonlight. A cold, drenching rain greeted us at daybreak but we pushed steadily on, crossing two branches of the Dungarvon and also a caribou barren which bade fair at every step to swallow up the horses. Over two hours were taken to traverse the last two miles of the journey, owing to the bog-holes around which a road had to be swamped and the numerous fallen trees which had to be chopped out. The weather soon cleared off perfectly, and while the team was slowly working its way up the hill, Fred and I caught some excellent trout at the big Dungarvon Dam. They took our fish-bait readily, but would not touch the fly. A little before dark we reached an old lumber shanty called Pond's Camp, the terminal station of the bull-moose express. Honest old Laziboo left us in the morning for the outer world, agreeing to return in four weeks' time to help us out.

Everything had now to be carried forward on the backs of the men. The loads they carried neatly packed in a blanket and strapped across their shoulders would have staggered a sumpter mule. Often as we journeyed north it became necessary for Henry and Jack to go back over the trail and bring up a load, while Fred and I loafed around the camp or fished for trout in the lakes. We did not care to use our shotguns on the ducks and partridges we saw, as we were in a country where the signs of big game were numerous.

Two miles from the terminal station aforesaid was a pond hole, where the fresh tracks of a moose were seen. Braithwaite made a horn of birch bark and gave him a call. Would that I could describe that call—its low, sweet, musical opening note; its rise and swell into a loud,

"WHISKY JACK."

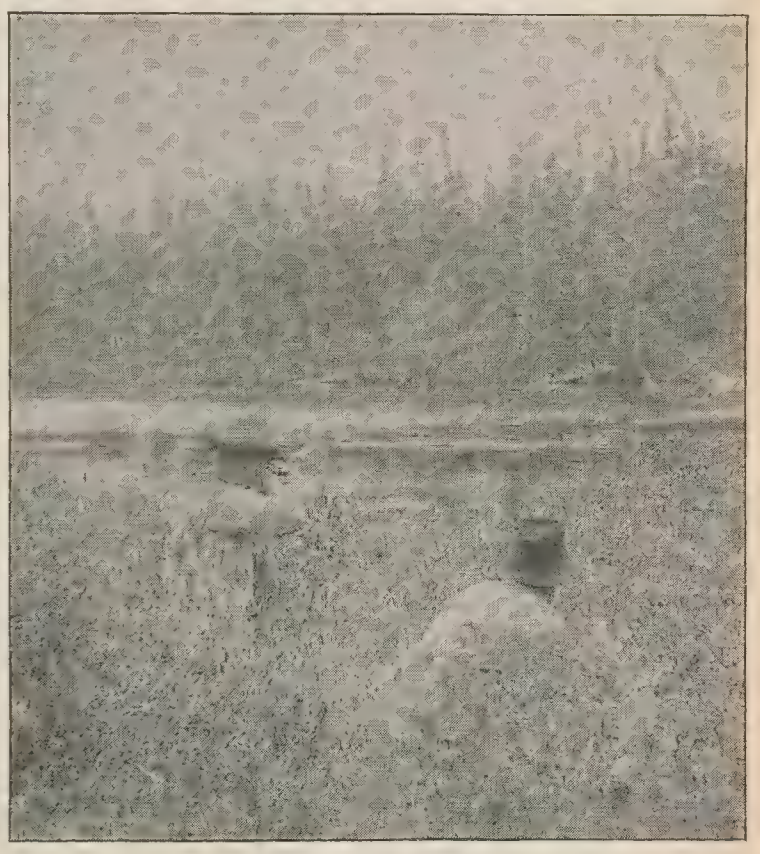
deep roll of melody that filled the valleys and surged like a tidal wave up the mountain side. I marveled not that many a man had grown gray and died in despair at being unable to compass it. Nor can I describe the weird, unnatural stillness that followed, when every murmur of the wanton wind, or ripple of the distant brook, or bo'm of the passing swamp-fly—yea, when the very beating of our hearts seemed like an answer to the summons. From the sublime to the absurd is but a moment's pause. At the second call an owl near at hand responded with his mournful cry, whereupon Braithwaite burst out laughing and shouldered his pack for the onward march. Henry said that last year when he was calling at the pond hole he was answered by a bear which came up through the brush almost within range of his rifle. He set a steel trap for him and next morning had the pleasure of knocking him in the head.

A three-mile tramp brought us to one of Henry's temporary camps, made of birch bark, near Burton Lake. We toiled onward, however, four miles further to Louis Lake, a lovely sheet of water, clear as crystal and glistening like a gem in its autumn setting. The lake, which is nearly two miles long and about half as wide, is right on the top of the mountain. A three-legged fox gazed at us as we approached the lake, and then scampered off in the brush. He had evidently at some former period been the victim of misplaced confidence in one of Henry's traps.

At Louis Lake was a permanent camp large enough to hold our party with comfort. It was a veritable museum, in which the relics of former hunting parties had accumulated, as well as the multitudinous bric-a-brac peculiar to the trapper's calling. Henry is fond of good reading, and we noticed several ancient files of FOREST AND STREAM in his library. We were not long in finding out that Louis Lake afforded superb trout fishing. Right at the landing in front of the camp Fred stood next morning, while Jack was "biling the kittle," and yanked out beautiful lake trout, averaging a pound in weight, faster than I could

AT THE BARK CAMP.

take them from the hook and kill them. There seemed to be no end to the supply; no limit to their appetite. Pork, fish or fly, it was all the same to them; and when we stopped fishing they crowded up to the landing and eyed us reproachfully. After that it made no difference when we fished—they were always there waiting patiently for us. Fred even caught them with a scrap of tissue paper on the naked hook. Henry told us of a lake not far away where the trout were 5lbs. in weight, and of other lakes to the west where tuladi or landlocked salmon could be found weighing 30lbs.



Within a short distance of the camp were Half-Moon Lake and Two Lakes, where Henry called several times without result. He showed us the spot on the shore of Two Lakes where last year a big moose swam across in answer to his call, and stood so close to the hunter that he shook the water from his mane over him before Henry fired. Not over a hundred yards from this spot, Mr. Rogers, a New York sportsman who had spent seven seasons in Maine and elsewhere without bagging his moose, killed a fine old bull in the fall of 1892.

Our next station on the northward march was Renous Deadwater, where Henry had another bark camp. On two occasions while there we heard the crashing leaps of caribou in the brush near us but failed to catch sight of them. One afternoon at dusk we saw a small cow moose traveling head down across the barren, but as it is illegal to shoot the female we allowed her to pass unscathed. We then pushed on for Little Sou-West Miramichi Lake. The trail for the greater part of the way led across caribou plains over which we walked as on a carpet of velvet pile. We passed a water hole where Mr. McAndrews, another New York sportsman, bagged his moose last fall.

It was early in the afternoon when we reached the southern shore of the lake. It is a most imposing stretch of water, four miles long and a mile wide, and dotted with many beautiful islets. At the landing was an old bark canoe, in which, after necessary repairs, we embarked upon the broad bosom of the lake, and poled to the camp three miles away. We routed myriads of black duck and were sorely tempted to unlimber the shotgun.

The camp was snugly situated in a sheltered cove and here I think Fred will agree with me that two of the happiest weeks of our lives were spent. We snared partridges, spruce and birch, with a wire on the end of a pole; we caught 2lb. trout in the lake and 4lb. trout over at the forks of the Little Sou-West stream; we photographed Whiskey Jack (the Canada jay) as he disputed with us the possession of our table; we explored beaver dams and houses in the streams near at hand; we caught a big black bear in a trap and took his picture, (which alas! proved to be a rank failure); we gathered wild cranberries on the shore of the lake, and we consumed more pork and beans than I would dare to mention. And at eventide when the sun had gone and the wind was hushed and the smoke of the camp-fire rose straight to the sky, we would sometimes go down to the shore of the lake and think of the absent ones over the hills and under the stars.

Nearly every day when the weather was reasonable, we

"WAIT TILL HE COMES OUT."

explored the surrounding lakes and plains for moose and caribou. Fred and Henry and I one morning embarked in the canoe intending to go to the barrens for caribou, when on the opposite of the lake half a mile away we saw a moose calmly walking along the bank. We paddled desperately to get within range of him, but the rushes in the shallow water delayed us, and before we could effect a landing he disappeared forever. We went ashore and looked at his tracks, and consoled ourselves with the thought that he wasn't a very big moose anyway. We then pursued our original plan, paddling to the foot of the lake, and thence on foot to Jack's Lake. The country through which we passed was chiefly a dry caribou barren on which the reindeer moss (*Cladonia rangiferina*) was abundant. We found a number of horns which the animals had shed, bleached by the weather as white as snow. Both dark and white caribou are to be found in this region and they mingle freely in droves. The latter are the larger variety, and their beautiful white "shirt-fronts" give them a very dignified appearance. For some reason which I have never heard explained not more than one-half of the cows breed in a single year. About one female in ten has horns but they do not compare with those of the male for size and beauty, and owing to their slight formation are apt to be broken by contact with trees and other objects. The bulls fight furiously in the fall of the year and often receive serious wounds. By the first of December nearly all the old bulls have shed their horns. Young bulls usually carry theirs until February, while the cows do not often lose theirs till March. In the mating season the neck of the bull caribou swells up to a great size, and he is then, like the bull moose, possessed of great vitality. His meat has at this time a strong, musky flavor, and is only to be relished by gentlemen of a severely practical turn of mind.

Caribou are getting more numerous in the Miramichi region every year. On Christmas Day last year seven herds were in sight at once on the ice of Little Sou'west Lake. A party of local sportsmen who were out with Arthur Pringle on Nor'west waters this fall saw forty-three caribou in one drove, and over one hundred animals in the space of two days. After snow falls it is very easy to track and hunt them down.

The moment we reached Jack's Lake we saw on the opposite shore and walking rapidly around the turn, a cow caribou and calf. Henry hustled us at a killing pace through the hard-hacks down the bank to meet her when she got around the turn, but we had hardly run a rod when

we were almost paralyzed at the sight of a grand old bull caribou close behind the cow and followed by two other fine cows. They were all, after the manner of caribou, in a rush to get somewhere. How we ever got through the hard-hacks and over the bog holes in time to intercept the drove is a mystery to us all. We had just reached a small opening in the firs, when the first cow caribou appeared in front of us, about 75yds. away, and wheeled to the right. "Wait for the bull!" was all Henry had time to say, when the royal animal came in view. Fred's favorite Marlin (.45-85) and the old Martini (.45-95) woke the echoes together, and the buck leaned up against the bank as though hit hard. Fred has a great habit of keeping the air full of lead as long as anything is standing. He fired three times in rapid succession and then I let the Martini loose once more for good measure. The caribou took two steps toward us, but his tide of life was ebbing fast and he fell forward and into the brook, driving one of his horns 3ft. down in the boggy bottom with the force of his fall. Four bullets had pierced his breast, any one of which should have been fatal. While the fusilade was going on the cows jumped away through the bush and we saw no more of them.

A drizzling rain set in one morning as we prepared to take a cruise up Pocket Lake, and I was greatly minded to surrender my chance for glory to Henry and Fred and remain in camp with Jack. However, at the last minute I decided to go, and the three of us put in a long, wet and profitless day. On returning to the camp Jack showed us where a big moose had, during our absence, come within 40yds. of the camp and stood for several minutes watching him. Jack had made frantic efforts to find a ball cartridge for the shotgun, but during the operation the animal calmly walked away. I kicked Fred, Fred kicked Henry, Henry kicked me, and then we all kicked Jack.

"I cal'late he was the most terriblest big moose with the most tremenjus pair of horns I ever did see," was the comforting assurance we received from Jack. Sufficient unto the episode is the cussedness thereof.

One evening when the uncanny laughter of the loons on the lake had died away, and we had snuggled ourselves down nicely in the blankets before a fire that sent the sparks in myriads up into the frosty air, we heard the low, deep, subterranean grunt of a moose apparently within a rod or two of the camp. There was an upheaval of blankets, arms, legs and guns and an avalanche of *dramatis personæ* poured through the doorway into the outer gloom. A silence so dense that it seemed to weigh a ton set in as we stood there peering into the shadows. We walked softly around the camp and down the path that led to Pocket Lake, but nothing could we see. We returned to our beds, when again we heard the grunt, and again we tumbled through the door. This time there were several grunts, and a sound as if our visitor was pawing up the ground, but the night was black as ink, and we could not locate him. Henry rigged up a birch bark torch, but all our efforts were in vain. In the morning we made a thorough investigation and found (so delusive as to distance is the grunt of a bull moose), that, instead of being close to the camp, he had been digging up the barren fully a quarter of a mile away.

On another occasion when we had been cruising all day without result, we returned to the canoe and found that a big moose had been there and mussed the place all up. "It all belongs to hunting," was Henry's comment when episodes like these occurred.

There came a day at last that will never fade from our memories. Henry and Fred launched the dug-out, landed at the head of the lake and then climbed a mountain *en route* for a little lake where the guide thought they stood a chance for moose. Jack and I paddled off in the opposite direction on our own hook. When the little lake was reached Henry gave a call, and was at once answered by a hoarse grunt from the woods on the opposite shore. There was no mistake about it this time. Other grunts followed and they heard the antlers colliding with the trees. They rushed down the shore so as to be opposite the spot where they thought the moose would appear. Before they reached it, a big set of antlers loomed up, pushing their way through the firs and hard-hacks. "Wait till he comes out!" said Henry. As Fred took the kneeling position, the noble animal stepped out in full view about a hundred yards away. He looked straight across the water at them, and with every hair in his mane standing on end, said as plain as language could speak: "What in the devil are you doing there?" As Fred fired at his breast he started off among the alders and firs that lined the shore. At every jump he took Fred let go at him with the Marlin. He disappeared from view in the firs, and they ran around the head of the lake after him. Fred came on him suddenly, broadside on, not 20ft. away, as defiant and kingly as ever, but breathing his last. As Fred gave him the finisher he came down all in a heap. While they were at lunch, after the animal had been skinned and dressed, and four bullets dug out of his carcass as mementoes of Freddy's deadly aim, they heard away down the lake, five or six miles off, a few remarks from the old Martini and rightly judged that something had happened to the Prowler.

After Jack and I landed at the foot of the lake we went back over the trail for some distance, but beyond chasing a moose calf which we never could get our eyes upon, met with no incident worthy of mention. Returning to the canoe, we had our lunch and started to paddle our way home leisurely by the northern shore. As we approached a rocky point we suddenly saw a small cow caribou, with limbs as delicate as those of a deer, and behind her a fine old bull, stepping daintily and softly around the turn. Our canoe at the time was heading straight for them, and the wind was blowing precisely in their direction. They were about 150yds. away, but the wind drifted us toward them quite rapidly. From the motion of the canoe it was impossible to get a steady aim. My first shot at the bull took effect, however, the bullet passing through his neck. He turned a trifle and faced out into the lake, as though somewhat confused. Neither of the animals seemed to pay the least attention to the crash of the rifle. My second shot went through the bull behind the shoulder, and he dropped in the water without a kick. The cow turned her head placidly around and took a casual glance at the dear departed, but showed no sign of concern. I fired then at the widow, but I think only inflicted a slight flesh wound, for she jumped over the bank like a flash and disappeared in the woods. I do not suppose there is a man on earth in these degenerate days more saturated with sanctity than my friend Jack Best; yet I am fain to confess that the remarks he made when trying to skin that tough old bull, knee-deep in the water, with a dull knife, would have reflected credit even on the unrepentant Laziboo.

During the remainder of our stay at the lake we tried to atone for our neglect of the black duck but they were very coy and shy. We found the broadbills and many other varieties of sea duck plentiful in Half Moon Lake and bagged a large number. At Two Lakes Fred and I were lucky enough to knock over a cow caribou in the thoroughfare at a range of about 400yds. Just at the foot of Louis Lake, while lugging a load of horns down the trail, Henry saw a large cow moose swimming across one of the inlets, evidently bent upon escaping from her male companion. We saw an exciting race at daybreak between a blue hawk and a partridge, in which, much to our delight, the hawk came out second best.

On Oct. 15 Laziboo and the bull moose arrived on schedule time at Pond's Camp. He and I went out to the settlement with the trophies of the trip, making thirty miles over the "portash" that day. Fred decided to remain in the woods a fortnight longer. It was five weeks before the party emerged, Henry having built a log canoe and brought them down the Clearwater. When the snow fell early in November they tracked a herd of five caribou and Fred bagged three of them before they could run 40yds. Along the Crooked Deadwater and at the head of Clearwater they saw many signs of moose but failed to connect. Fred was much pleased with his cruise and we were all much pleased with Fred. We have planned another trip for next season, which I am not without hopes will be set forth in the comely pages of FOREST AND STREAM by a much more facile pen than mine.

FREDERICTON, N. B. PROWLER.

## DUCKING IN DECEMBER.

THE season had opened well, and black duck and sheldrake had been plentiful, while one flight of geese had struck in and been fairly accounted for by one or two fortunate beings. Our luck had been good into November, and the score on the Skipper's boat-house door showed a goodly record. December opened cold, and the harbor was frozen over for the first time during the season. This made getting out to the reefs well nigh impossible, and we rather languished for a chance at our favorite sport until the middle of December, when a thaw set in, and the ice, assisted by a blow, broke up and left the harbor open. The weather was so much warmer that the Skipper proposed a trip along shore for a day or two of duck shooting. I jumped at the proposal and inside of three hours was at the creek where lay the Gypsy, a cabin catboat, 22ft. long, an able boat and no laggard. I found the Skipper busily engaged in stowing dunnage and provisions in the Gypsy, while his man was bending on the small mainsail, which was made for our use during the fall season. I turned in and helped to stow the bedding, provisions, oil-skins, etc.

Three hands made quick work and by three o'clock the Gypsy lay out in the channel, with everything aboard but the guns. Some time was occupied in filling shells and by four o'clock we were aboard, clad in corduroys, reefers and hip-boots, and the Gypsy went tearing down the harbor with a stiff leading breeze, and doing splendidly. The weather was not unpleasantly cold and heavy clothing kept us comforable, while we were in high spirits regarding the prospect of a good time.

By five o'clock we were among the islands, after a quick run to the westward, and determined to lay up and get some decoy shooting, and run further on the next day. The breeze had freshened considerably, but we were up under the shore and in smooth water, and very soon ran into a snug bay, horse-shoe shaped, and dropped our hook. Here the Gypsy lay easily, with a good shelter, and splendid holding ground. We stopped only long enough to snug down, and then, jumping into the sneak-box towing astern, we pulled into the shore. Here a heavy line of sedge and marsh promised a good chance for a few shots from the decoys. These we anchored in short order, and running the sneak-box into the sedge covered her deck with grass and put a handful on our hats.

The night proved a good one, the heavy wind bringing the ducks in, and we bagged five in the hour we lay there. The Skipper had a very lively chase after a bird that he had winged and which fell into the sedge. If that duck was winged he made slashing time through the shallow water and sedge, and the Skipper fairly earned him when he caught him and wrung his neck.

The darkness made further shooting impossible, so hauling in the decoys we pulled aboard the Gypsy and proceeded to boil a "caulker" of coffee. How good that aroma, and how much better the taste of that decoction of the fragrant berry! After being cramped in a sneak-box for an hour on a winter's night, with every nerve on the *qui vive*, the warmth of the Gypsy's little cabin, with its kerosene stove heating a big pot of strong coffee, was something to be remembered. We ate a hearty supper, pulled out our briers, and between puffs planned the morrow's campaign.

During the night I awoke and thought I heard some one walking on the beach, his footsteps crunching loudly on the frozen sand. We lay near the west shore, about two rods from the beach, and I thought some duck hunter might be staying in the old house on the island, and seeing the Gypsy had walked along shore to see who we were. Under this belief I poked my head out of the cabin and stared ashore, but could see nothing on account of the darkness. Ugh, how cold it was! I hailed, but got no response, and dodged back into the warm cabin. I thought it was not worth while to freeze for the sake of finding another duck crank walking along shore. I found the Skipper awake, and his salutation as I tumbled under the blankets was, "Who in thunder is that walking along the shingle?" I observed that if he was anxious to discover he could go out and try to. As for myself, the cabin was more congenial than the temperature outside at present. The Skipper's curiosity was aroused and out he went, and I heard his ejaculation as the cold wind struck him. He also hailed the beach, and got no reply. Then I heard him moving about on deck, and presently he crawled into the cabin, all in a shiver with the cold, and disgustedly remarked that "he didn't see how any one could be such a blamed fool as to take the scraping of the sail on deck for the footsteps of any one on the beach." I didn't say anything, but I fervently kicked myself. Next morning we found that a fold in the sail had worked loose, and the wind, scraping the stiff canvas across the cabin top had made the illusive crunching sound. Neither of us mention that matter much. The Skipper said he wouldn't if I wouldn't.

The next day it blew heavily from the westward and the Skipper decided that the Gypsy would be full as comfortable by lying in the bay as by staggering under two reefs outside, and I agreed with him. We lay around in the little cabin all day, cleaning the guns and indulging in an occasional game of California. The ducks killed the preceding night proved very fat and large, notably the one which led the Skipper so lively a chase through the marsh. This was the largest black duck I have ever seen killed. Before dusk we pulled the sneak-box into a line of sedge, set the stool, and managed to get three birds during the time there. I also managed to get a boot-leg full of icy water by stepping into a small pond hole in the darkness, just as we left the marsh. That night passed quietly enough, and we heard no more "footsteps."

The following morning we got under way at 9:30 and ran to the eastward ten miles, getting several old squaws and two coots, running down on them and knocking them over as they rose. We had quite a brush with a large oyster sloop, having on board a party of duck shooters, but the Gypsy had the heels of him, and he could not hold us. We thrashed back to the old berth by four, and shot from the same marsh that night, with no luck; misses were in order, and I was disgusted with myself at my wild shooting.

The next day broke mild, and we jogged up and down off shore with a light air from the westward, getting a number of old squaws, one sheldrake and a tough old coot. This same coot I shot at three times before he would let go his grip on life and allow his worthless body to be picked up. I chased him in the sneak-box and got him, more out of spite than because I wanted a coot.

We changed our anchorage that afternoon, dropping the hook in a creek that made into the shore. Here we had better luck; set the stool in a marsh that was full of pond holes and was an excellent feeding ground. The score was increased by seven, and we agreed that to-morrow we would start the Gypsy on the run home, for the next night was Christmas Eve, and the 25th must find us around the festal board, where the time-honored turkey should surely be flanked by fat duck with brown gravy.

During the night the wind hauled into the northeast, and the morning was stormy and dark when we roused out. Frequent squalls of wind, bringing rain and sleet with it, promised an unpleasant run home. The Skipper tied in a reef, while I broke out the hook, and the Gypsy's head was put toward home. We were close-hauled on the easterly breeze, and before we were clear of the islands the reef proved none too little, for we had to ease her continually as the heavy puffs struck us. With a single reef tied in the Gypsy surged ahead bravely, but it was wet, cold work. About an hour after leaving the islands the boat towing astern parted her painter and got away, and we had to come up in the wind, drop the peak and square away after her. It was no small job to pick up that sneak-box in the weather we were having, with a heavy seaway rolling in from the eastward; but we managed it, and bent a new line to her pretty expeditiously.

The cold, raw wind and spits of rain made handling the Gypsy a very tedious and trying job, but we were getting on in good time. By 2 o'clock we were off the harbor, and ran by the breakwater, over which the sea was tumbling gloriously. Here the Skipper got wildly excited as he pointed out a dog-seal which had risen abot sixty feet to leeward of us. It was a splendid chance, but my Scott was in the cabin with the Skipper's, and the seal dove in an instant.

These hair seals are not uncommon through the sound and may be seen on the reefs at low water, their hair shining like polished steel as the sun's rays fall on them. They are of no value, however.

We found just water enough to cross the flats and avoid a crooked channel, and in a short time the Gypsy lay off the boat house and we pulled ashore with the dunnage and birds.

Christmas Eve! The bells were just ringing out as I reached home, tired, hungry, but at peace with all the world. The rain had changed to snow, and already the ground was white. But I thought of the boat house door, where the Skipper chalked up for the trip fifteen black duck, three coots, one sheldrake and several old squaws, and I didn't care if it snowed the whole harbor up.

I have been out in November and February of the present year, but have found the birds exceptionally wild and hard to bag. TACOMET.

### Foxes as Tree Climbers.

VELASCO, Tex., Dec. 3.—*Editor Forest and Stream:* I notice some discussion of late in the FOREST AND STREAM relative to the ctimbing qualities of the fox. It seems odd to a Texan, to hear of any one doubting the fact that they climb about as well as a cat.

Fox hunting is a favorite pastime in the timbered country of east Texas. Most of the planters keep packs of half a dozen, or in many cases a score of hounds. They usually meet at some trysting place on bright moonlight nights, and combining their dogs in one grand pack make the welkin ring until early dawn after the cunning little fellows.

It requires some skill in the art of horsemanship to follow a pack of hounds through the dark woods, over logs and trees, and through brier patches, but the sport is glorious. If any one cares to learn more of the habits of the fox and its skill as a tree climber when close pressed by the hounds, let him write to that veteran of the chase and sportsman, Judge L. B. Hightower, of Huntsville, Tex., or to Capt. Dick Lewis, of Waverly, Tex., and they may hear a great deal of fox lore. O'BRIAN SHEA.

### Let Him Speak Now.

*Editor Forest and Stream:*

In traveling between Newark and New York by the C. R. R. of N. J., I never—that is, hardly ever—see that long point which makes out into Newark Bay just south of the bridge without saying to myself, "What a perfectly elegant point that must have been to stool ducks from in old times!" or words to that effect, be the same more or less. Is there not among your Hudson or Essex county readers one at least who used to put out his decoys there once upon a time in the auld lang syne, and can tell us of his luck? If so, I prythee let him have parlance in these columns. J. L. KEARNEY.

## A WEEK WITH THE GRAYLING.

### In Two Parts—Part Two.

I DID not sleep much that first night in camp. My bed was comfortable; the mosquitoes, kept back by the netting across the entrance to the tent, could not get at me; but I had not slept in a tent for years, and the novelty of the situation kept me awake for some hours. I lay and listened to the voices of the night, most prominent and least musical of which were those certain sounds produced by sleeping man when lying upon his back with his mouth open. More pleasing was the gentle murmur of the creek, the ceaseless chirp of the crickets and the mournful call of the whippoorwills I heard the horses munching their hay, the hoot of a distant owl, the hoarse croaking of a frog and the splash that he made as he sprang into the water. A louder splashing was made, no doubt, by a mink, engaged at his old trick of poaching the grayling. Once I heard the blood-curdling cry of a lynx in the thick woods on the top of the hill, opposite, as he pounced down upon some unwary rabbit or dozing partridge. That crashing in the bushes was made by a prowling bear, or a deer on his way to the creek to drink. At last I fell asleep.

When I opened my eyes it was broad daylight, but my companions were still sleeping soundly and I stole out of the tent without disturbing them. The horses got up from the ground and shook themselves, and I threw them an armful of hay, then slipped on my mackintosh wading boots and went down to the creek. The sun was just showing itself above the bluff back of the grove, and the birds were hailing its appearance with their wildest songs. Rigging a cast of flies, professor for stretcher, cowdung for first dropper, and coachman for the second, I soaked my fly until it was pliable and then waded into the creek until the water was waist deep, and made my first cast into the pool at the foot of the rollway. The flies had hardly touched the water when there was a rise to the professor. I struck, but too late. Again and again the flies went out, every second or third cast provoking a rise, now to one fly, now to another; but the result was always the same. I could not hook the lively fish that seized and rejected the lure before I knew it.

This may appear strange to the angler who has never cast a fly for grayling, but not to the old grayling fisher. The grayling takes the fly differently from the trout. The trout rushes for it, often leaping out of the water in his eagerness to seize it, thus giving the eye a chance to inform the brain and the brain to direct the wrist to strike; while the grayling rises swiftly and silently, straight upward from the bottom, rather sucking the fly in than seizing it bodily, and seldom showing any part of itself above the water. The smaller fish, however, will often leap entirely over the fly without attempting to touch it, seemingly in a spirit of play. After a time they began to show that trick to me, acting for all the world as though they were playing leap-frog. No sooner did my leader strike the water than two or three of them would turn a somersault over it, one after another, but never seizing the flies, though they sometimes fell upon the leader and fooled me for an instant into thinking that I had had a strike.

Now, I profess to be a patient man, patient in angling at any rate, but I must confess that I became irritated after a few minutes' experience of their monkeyshines. I tried several different flies, with no success, yet the fish continued to flip out of the water all around me, even breaking almost under my nose. It really began to look as though their saltatory performances were intended to show their contempt for me. There were plenty of May flies floating on the surface which they would snap right alongside my imitation fly, but they paid not the least attention to them. It was exasperating, and I was silly enough to lose my temper, casting with much unnecessary vigor and striking viciously whenever a tail, striking the leader, deluded me into the belief that I had a rise.

At last I snapped off a fly, and just then I heard a suppressed snicker on the shore behind me. Whirling quickly about, there stood my three friends at a safe distance from the flies in their backward flight, laughing at me. "Mighty poor marksmen, those grayling, eh?" snickered Ryan. "I think the trouble is that you don't use force enough!" jeered Wesson. "If you would only lash the water into a foam and show the fish that there was something there for breakfast, they might bite."

Assuming an air of dignity, I faced the creek and made another cast. Shades of Walton! A strike! I struck, and instantly a small silvery object went sailing over the heads of my tormentors and landed in some bushes far back in the grove. My leader went with it. The roar that went up from those three silenced the birds and so frightened my other tormentors in the water that they ceased their flipping. A moment I stood gazing stupidly after the poor grayling, then the absurdity of the situation burst upon me, and I joined in the laugh at my own expense. Instead of grayling for breakfast that morning, as I had fondly hoped, we had dried brief; but there was plenty of fun in which I joined as best I could.

I think that I mentioned last week that my acquaintance with the grayling had been limited, up to that time. That this experience of mine is no fancy sketch any old grayling fisher will know at once, and understand the whys and wherefores. He has probably been through an experience similar himself. In passing I will say that, later in the season, I took with me to that same stream an old trout fisherman, an expert fly-caster, who had never tried his hand for grayling. I started to give him some "pointers," but he seemed so self-satisfied that I desisted and let him learn for himself. I had a good deal of quiet fun in watching him fish the same pool I had fished. He put on the same flies I had put on. I told him so much as that—and there are none better so far as my experience goes—but, like mine, they were too large on a No. 6 hook, when they should have been No. 12. He kept his line taut and his flies on the top of the water, skittering them constantly, as I had done. He got rises, and did not know it until too late. The little jumpers played leap-frog over his leader. He got "warm under the collar," the perspiration rolled down his face, but no fish rewarded his frantic efforts. Finally he turned and remarked to me in sarcastic tones, "I thought you told me that grayling were savage biters. I think they are the poorest marksmen I ever saw." Those were Ryan's own words to me a month before. I let him "gang his own gait" for half a day. At noon I returned to camp with a basket full of nice fish, having taken it easy, while he had a few miserable little things that he ought to have been ashamed to keep, and was thoroughly tired out and disheartened. His chagrin when he saw my catch was exceedingly gratifying to me, remembering his patronizing airs of the early morning, when I had attempted to tell him the little I knew of the grayling's ways. After dinner he was perfectly willing to go to school and proved so apt a pupil that he nearly eclipsed his teacher. But to return.

When breakfast was over Arnold said, "Now, boys, bring the old man of the party. I shall take an old man's privilege and go down stream. Our tenderfoot visitor had better go with me, and I will give him a few points."

I was glad to hear this, for I had begun to realize that I needed a few lessons in grayling fishing. Wesson and Ryan started off at once up stream, and we were left to ourselves. Producing his fly book, Arnold took from it several papers of new flies and handed them to me.

"There," said he, "those are the proper thing; your flies are all too big for grayling."

They were beautiful little midgets, tied on No. 12 Sproat hooks, with reversed wings.

"Now," he continued, "small flies require a fine leader and a fine leader requires a fine line; let's see what you have."

I found the requisite articles, and while I was rigging up my new outfit Arnold jointed up a long and rather stiff rod and produced from the wagon a wooden box in which there was a goodly supply of angle worms. "I am sorry to say," said he, "that I am almost reduced to the necessity of becoming a 'bait fisherman,' one of those contemptible fellows that the writers on angling regard with such disfavor. I am very near-sighted and cannot use the fly-rod unless the day be dark and the water free from glare." He sighed and looked pensive for a moment. "Now, then, are you ready? Just step right in there where you were this morning. You fished that pool then as you have been accustomed to fish for trout, casting into the swift water at its head where you will find that only the small grayling lies. The big ones are at the lower end where the current slackens and eddies, bringing their food right into their mouths. The big grayling are lazy fellows. Cast your flies just beyond that patch of circling foam and I think you will get a good one. Let the stretcher fly sink a little, but be sure to keep your line taut. The big grayling never miss their mark, like those little fellows; when they go for anything, it is their meat."

I did as he directed, dropping my flies just above the patch of foam indicated and allowing the eddy to carry them beneath it. Instantly there came a solid tug on the line and I struck gently, knowing well that the fish must have hooked himself. Out of the water he came, once, twice, three times, then down to the bottom. The flight was sharp but short. The grayling makes a grand struggle for a minute or two, but he loses his courage quickly and is the easiest of game fishes to land when once he has given up. But his mouth is exceedingly delicate, and he must be played gingerly to prevent the hook from tearing out. I soon had the head of my prize above the surface and towed him gently to the shore; his great dorsal fin held erect and offering such resistance to the current that he came in with a weaving motion peculiar to the grayling, owing to the curvature of the dorsal. Arnold at once weighed him on his pocket scale. "Pound and a quarter, strong," he announced; "Now, my boy, step up and admire your first grayling." And my admiration was genuine and found expression in terms that appeared to satisfy my mentor.

While not as brilliant in hue as the brook trout nor showing such contrasting colors, the grayling is a more shapely fish, and is very handsome when fresh from the water. It is a scale fish and its colors are as evanescent as they are delicately beautiful. Its body is a silvery gray along the sides, darker toward the back bone, lighter toward the belly, the lower portion of the sides faintly tinged with delicate shades of pink and green, which quickly fade away. The great dorsal is prismatic, and is dotted with small black spots. The same spots appear back of the gill covers. The ventrals are beautifully striped, and the caudal is iridescent. It has the adipose fin, characteristic of the salmon family. Its head is smaller than that of the trout, and more elegantly shaped. The eyes are of a golden color, large and prominent, and the whole expression of the head is singularly attractive.

Thaddeus Norris once said: "When I look into a grayling's eye, I am sorry I killed it; but that feeling never prevents me from making another cast, just to see if another will rise."

I took two more nice fish from beneath the circling foam, and after that I could not get another rise. Arnold waded out and took one with his baited hook, which weighed nearly a pound and a half. The largest fish are invariably taken with bait.

What is more enjoyable than fishing a pretty stream on a pleasant day, with an unselfish companion close by to rejoice with one in his successes and condole with one in his misfortunes. Wading down the middle of that clear stream, often keeping my feet with difficulty in the strong current; casting my flies right and left, now on dancing rips sparkling in the sun, and again on some deep and quiet pool shaded by arching trees overhead, assisted by much information and advice from my friend, who was always near me, beaming benignantly through his glasses while he talked. I constantly rejoiced over my good fortune in being there. The dreams of my "fireside angling" were at last realized, and there was no disappointment in the realization. For once, anticipation did not prove better than the reality.

The creek averaged about 10yds. in width, broadening and shallowing in the stretches, narrowing and deepening around the bends. The bottom was yellow sand and very free from obstructions, all fallen trees and brush being removed by the annual log drive in the spring. In places the clay substratum was washed bare and was as hard and slippery as a piece of wet castile soap, making the footing exceedingly precarious; but, warned in time by Arnold, who knew the locations of such spots, I escaped a ducking. My wading boots come well up over my chest, and it would be no joke to fall down and get them full of water.

It would have been impossible to fish that stream from the banks, which were heavily clothed with water elms, swamp maples and white cedars in the swamps. There was a thick and almost impenetrable undergrowth of bushes and running vines which we had to cut our way through with our knives when we were forced to take to the shore by a pool too deep to wade.

The grayling were in a biting mood and we had good sport. In the rips I sometimes reeled in two and three at a time, but very many of them were under a quarter pound in weight—that was our self-imposed minimum—and were returned to the water. The pools at the bends, however, yielded fine fish, the bait always beating the fly in the size caught. Arnold used a heavy sinker and ran his hook close by the sides of sunken logs and into

MICHIGAN GRAYLING.

Amateur photo by F. A. Mitchell.

the recesses of the holes where the large fish lay in wait for their food to come to them. The grayling does not rush out and seize the bait greedily, like the trout, but quietly sucks it in. You see your line stop, wait an instant, then strike and pull in a fish. Not much fun about that kind of fishing, and I soon understood why Arnold sighed when he said that he had become reduced to the necessity of bait-fishing. My friend made no attempt to play his fish, his stout rod enabling him to lead them directly ashore in spite of their struggles. Neither of us used a landing net, for the reason that its use is almost impossible on such a stream; at best, it is very inconvenient. When the fish has been safely netted both hands are needed to detach the hook and transfer it to the creel. While doing this one is in danger of being swept off his feet by the strong current, and should the rod be dropped it would be whirled away and perhaps lost. Since, then, it is necessary to go ashore to remove the fish from the net, why bother with the thing at all? We always managed to find some place near the bank where we could lead the fish upon the sand, and seldom lost one. The water was very cold, so cold that I was glad to seek a sunny spot very often, and turning down my wading pants sit there until my chilled limbs became warm again. One day later on I saw a couple of fellows wading the creek with nothing on but their boots and overalls, and I came to the conclusion that they must have constitutions like that of a polar bear.

Once, on rounding a bend, Arnold held up his hand to me as a signal for caution. On reaching his side I saw a family of deer standing in the water a short distance below. We watched the pretty creatures for some minutes—there were three, a buck, doe and fawn—when a sudden puff of wind carried our scent to them and they fled into the woods, uttering snorts of alarm as they went.

After fishing three hours we had filled our baskets and reluctantly returned to camp. Ryan and Wisson came in an hour later, when we counted and weighed our several catches, the results being as follows:

| | |
|---|---|
| Arnold, 18 fish, weight 16¼lbs. | Ryan, 5 fish, weight 3lbs. |
| Wesson, 15 fish, weight 12½lbs. | The writer, 24 fish, weight 16lbs. |

I was the only one who had used the fly and my fish averaged considerably less than those taken with bait, as the figures show. I think that I returned to the water more fish than I kept. Ryan's comparatively poor showing was explained by Wesson, who said that he was chasing butterflies and hunting for bugs most of the time. The good sport enjoyed that first morning having satisfied the keen edge of our desire for fishing, it was decided that thereafter only two should go out at one time, the other two to take charge of camp affairs for the day.

I afterward found that it was not always an easy matter to fill my basket. There were days when the grayling would not take the fly at all, or would play leap frog over it all day long. There were other days when Arnold's choicest worms had no attractions for them, and at times neither bait nor fly had any success. One might fill his basket in an hour or work hard all day for a scanty mess. The reason for their caprices was entirely beyond our comprehension.

Ryan thought that it was pure cussedness, and it did look like it. Arnold sat on a log one morning and took from a big pool just below the bridge nine fish which weighed 11lbs., with bait. Coming in with them and telling me about it, I went down and took out eight more, which weighed a little over 6lbs., with the fly.

I seldom failed to get fish about sundown, using at that time a little larger fly than during the day. The grayling is the Quaker among fishes, and his taste runs to quiet colors. Gaudy flies are useless with him. On very bright days when no breeze ruffled the water I found a very small dark fly to be the best, the blue-bottle being particularly killing.

The best fish taken during our stay yielded to Arnold's bait and weighed a trifle over 1½lbs. This, he said, was the largest one that he had ever taken in years of grayling fishing, and he characterized as highly improbable all stories of grayling being caught that weighed 2lbs. and over. My first fish was my best, not counting as first the little one which I threw over my head.

The time flew by, with never a dull minute to mark its flight, and the day of departure was at hand almost before we knew it. With feelings of regret we broke camp, reloaded our wagon and took the homeward track, carrying with us a goodly store of fish safely packed in ice. Refreshed by their week of rest, Rarus and Maud S. went along at a much better clip than they had shown on the going trip. The day was cloudy and we suffered from no other discomfort than the dust, reaching our destination without incident. The next morning I bade my friends farewell and departed for home, sped on my way with many hearty wishes for my speedy return for another fishing bout.

In conclusion, let me say to the angler who has not as yet cast his maiden fly for grayling, *carpe diem!* The close of the present century will find it practically extinct in all the more accessible streams.

Frank Asa Mitchell.

### A Strange Breed of Cats.

The tall, lank form of "Uncle Caleb" on a sand spit "throwing" for bluefish surrounded by a half score of his favorite tabbies, was and may be still for aught we know, one of the features of Barnegat Point. "Uncle Caleb's" one weakness was a passion for cats. He had, when the writer had the privilege of visiting him, thirteen beautiful tabbies, white, black, spotted and maltese, and all peculiar in one respect—they had no tails. In a few the caudal appendage was only foreshortened, but the majority were absolutely tailless. "Uncle Caleb" gave a very simple explanation of this peculiarity.

In the Isle of Man, as is well known, the cats have no tails. One stormy night several years ago, it chanced that an English vessel having a Manx cat on board went to pieces off Barnegat. Most of her crew were drowned, but this cat with his nine lives made his way through the breakers and then dragged himself to "Uncle Caleb's" cottage, where he was comforted with warm milk and a plate of raw fish. The old patriarch was living at the time of our visit and ruled over a family of twelve tabbies, very much like their father in the matter of tails.

"Uncle Caleb" is very fond of exhibiting his pets to visitors and of showing off their tricks and manners. They followed him about, came to his call, leaped through a hoop made of his curved arms, and performed a variety of strange tricks and antics when commanded.

Uncle John.

## CANADIAN FISHING.

### Past and Present.

The "old stager" period in any profession affords subject for serious reflection. In "looking backward," however, to one's first salmon, one's largest trout, vistas of summer holidays in Acadian forest, or on Canadian river or lake, serve to brighten the gloomiest autumnal day. It is such a "looking backward" that I now propose.

The distance of time is so great and the change of surroundings so marked, I care not to enter too minutely into detail as to time. The place selected as a happy hunting ground is the banks of the Restigouche River, New Brunswick, Canada, a Micmac canoe the means of transit on that river and on the St. Johns River from the Gulf of St. Lawrence to the Bay of Fundy.

As regards means of locomotion in this part of Canada, the contrast between past and present is most striking. Then (in my early day) the stage wagon, over rough and hastily constructed roads, or small and inefficient steamboats, along the coast line or on the principal rivers—the St. John and Miramichi—were the only means of transit. Now the country is a network of railways, and a well-equipped Pullman car conveys the luxurious traveler to every man's door. The I. C. R. and Grand Trunk railways from Halifax to Quebec westward and the C. P. R. from the Atlantic to the Pacific, vie with each other in efficiency.

Alas! the contrast between past and present, as regards sport, is not so pleasant a picture. Then you fished for salmon and trout or stalked the wily caribou without leave or license, at your own sweet will, your only mentor and guide being the Micmac or Milecete Indian. Now a combine or syndicate of Canadian or United States merchant princes has almost the monopoly of river, lake and stream. At each picturesque spot or at each turn of river, lake and stream, a club house, with its "modern improvements"—so-called—is to be found, until salmon and trout have been improved out of the waters, or placed out of reach of the "poor and proud"—so that men with money—luxury with lucre—have, as a rule, taken the place of fish and fishing.

Happily there still remain certain parts of this favored land, where rod and gun have seldom found their way, and where few but the red man's feet have trod. The watershed of New Brunswick, the best hunting grounds of the maritime provinces of Canada, geographically, though on small scale, is not unlike the Great Divide of the United States. Geographically from a sportsman's point of view it is of intense interest.

Here, from some inland lake or highland spring the great rivers of this well watered province, Restigouche, Nepiseguit, Tobique and Miramichi, find their source. Here, moose and caribou reign supreme. Here, in cool springs on many a summer day, monster trout find seclusion and refreshment; and here, removed from

> "The dreary sounds of crowded earth,
> The cries of camp or town,"

the antidote for the "fever called living" is found.

To the source of one of these grand rivers, the Restigouche, two old soldiers and a recruit proceeded on a summer holiday in the now distant past. We secured six Micmac Indians, with three canoes. Their canoes differ from the Milecete canoes in being larger and stronger and heavier, and rounded at bow and stern, instead of being pointed as are the Milecete canoes.

In those days you had but to lift your finger and the whole tribe of Indians of the Campbellton wigwam encampment were at your disposal as guides for an expedition such as this, and a trifle per diem sufficed for payment. Now an over-civilized half-breed, whose "education" has not been neglected in the common school or the village grog shop, will only serve you with pole or paddle at an exorbitant amount per day.

At last our canoes, well filled with supplies for the voyage, await us at that most picturesque spot, where the Metapedia joins the Restigouche River. Good-bye is said to civilization and to our friends, the Frasers at the then "last house," where we had received genuine hospitality from the "lord of the soil." We start! Who can adequately describe the birch bark canoe as a mode of progression? The Earl of Dunraven has eloquently and well attempted it in the following words: "Among all the modes of progression hitherto invented by restless men, there is not one that can compare in respect to comfort and luxury with traveling in a birch bark cane. It is the poetry of progression. Along the bottom of the boat are laid blankets and bedding, a piece of wood is sloped against the middle thwart, affording a delicious support to the back; and indolently you sit or lie on the most delicious of couches, and are propelled at a rapid rate over the smooth surface of the lake, or down the swift current of some stream.

"Dreamingly you lie, lazily looking at the pine-covered shores, you wander into dreamland, to awake presently and find yourself sweeping round the curve of some majestic river whose shores are blazing with the rich crimson, brown and gold of the maple and other hardwood trees in autumn dress.

"Presently the current quickens; the canoe shakes and quivers through all its fibres, leaping at every stroke of crew. Before you is a seething mass of foam, its whiteness broken in by horrid black rocks, one touch against whose ragged sides would rip the canoe into tatters, and hurl you into eternity. Your ears are full of the roars of the water; waves leap up in all directions as the river, maddened at obstruction, hurls itself through some narrow gorge. The canoe seems to pitch headlong into space. After the first plunge you are in a bewildering whirl of water—the shore seems to fly past you—crash! you are right on the rock and (I don't care who you are) you will feel your heart jump into your mouth; another stroke or two, another plunge forward, and you pitch headlong down the final leap."

We had but to use our own judgment as to the salmon pools to fish or let alone; where to camp or where to secure the easily caught splendid trout was a mere matter of choice.

We had proceeded but a few miles, each white man of the party reclining midships in his canoe, as already described, while his two red men at bow and stern, with unfailing skill, poled up rapids, or through long stretches of still water—when my steersman was taken suddenly ill. There was no "medicine man" among us. We could but resort to the tactics of the barber in southern Spain—bleed freely—or to the more agreeable treatment, administer the cup that cheers. All in vain. By sign only or by feeble whisper to his comrade we found that the sick man wished to be placed on a "catamaran" or raft, and with the minimum of rations, launched on the stream, allowed to drift to his wigwam on the river bank. With some misgivings we thus left him to his fate, and long afterward, were glad to learn of his safe arrival at his home, and his recovery from illness.

It was thus brought about that I had to take the steersman's place with pole and paddle—I a novice in the steerman's art. No longer could I lie dreamingly in the canoe. No longer could I find time for poetry. I must resort to prosaic action. I must "work my passage." Soon, however, I became fairly proficient in the art, and thoroughly enjoyed the health-giving exercise.

To point out the number and weight of salmon and trout caught on any particular day, or to refer to color and size of fly, or length or weight of rod, skill or want of skill of angler, would give but a faint idea of the pleasures of such a trip as this; each turn of the river affords fresh and varied material for the artist, the geologist, the lover of the flora and fauna; and at each halt for the midday meal or at the evening camp ground we had fishing to our heart's content, and the artists of the party too soon found their sketch books filled with tid-bits from the ever-changing landscape, mountain and river, hill and dale and forest; and whatever our individual tastes, we had abundant opportunity to gratify them.

The following may be mentioned as among the best fishing and camping grounds: Mouths of Metapedia, Upsalquitch, Patapedia and Kegwick. There is good salmon fishing on all these rivers, while at the outlet of every brook, with its cool water, large trout are found.

The hours in camp each night passed all too quickly, with story from many a camp and many a hunting field in more than one quarter of the globe, the novice of the party, like the redskins, being a good listener, till one by one we sought the spruce bough couch.

We are, all this while, passing pleasantly and profitably up the Grand Restigouche River. We had not met man, woman nor child *en route*. The time was early in September when autumnal leaves were in their brightest colors. A flock of flappers had for several days been driven on in our front, as we passed up the river, and this flock had been daily increasing in number of birds. One morning we were having our swim in the river, when the peculiar noise of a canoeman's pole was heard up stream; soon the voyager had disturbed the flock of flappers, and in an instant we were surrounded by countless frightened birds. We had but time to seize our guns, and in our lightest "marching order," a battue commenced such as was never seen or heard in a "hot corner" in pleasant shooting season. When the astonished canoeman appeared on the scene (he naturally imagined that he had suddenly come upon a wild tribe of white-skins), we had laid out a long string of fine fat flappers on the river bank. I need only add that on that day our dinner was not limited to the usual fare of trout and salmon, pork and partridge.

The advantages of a round trip such as this we are taking become more apparent as we approach the source of some great river. The life of luxury in a club house, to which we have already referred, at no great distance from the river mouth, with perhaps one or two salmon pools only at your disposal, which can only be fished in the early morning or in the evening, is a life of comparative idleness, and can scarcely be called "having a good time" in the best sense.

On the other hand, when on a round trip, changing camp daily, there is varied sport, varied picturesqueness, and each day brings fresh enjoyment. This was our experience, and all too soon we arrived at "the portage."

It must be said that the approach to the portage, after you leave the main Restigouche River and enter the Wagan stream, is by no means easy and attractive; the stream is narrow and overhung with alder bushes; we had frequently to resort to the ax to chop out bushes to allow the canoes to pass up stream. The longest journey, however, comes to an end, and there was a shout from the leading bowman, "Here we are! The portage!" Here fresh difficulties met the novice. He found that it was not sufficient to become proficient in the art of wielding pole and paddle. Here he had to "take up his boat and walk"—walk for three miles—a tortuous passage from source of Wagan to that of Wagancis, there to embark *en route* for Grand and St. John rivers to Bay of Fundy, a round trip of some hundred miles.

That three-mile portage has yet to be done. A Micmac canoe is no light weight. I lift the thing on my shoulders; I move on a few paces, oh, how slowly! I stop; I place it gently on the ground, oh, how gently! I sit down only to admire its structure, its proportions—its weight is none the less—and this weight has to be borne on unwilling shoulders, over three miles of road, so-called. Roads indeed! We only say "rocks, knolls and mounds confusedly hurled," with slush and mud and dismal swamps.

Would that I could reduce the weight of this graceful Micmac canoe! Would that I could balance it on my shoulders without regard to the picturesque, only thinking of physical endurance.

My pride at acquiring skill as a canoeist has fled to the winds. I am a mere beast of burden.

But the "longest lane"—can this be one?—has its turning. Toward evening of a long and weary day the "glad waters" of the Wagancis are in view. The burden is laid down for the last time. There is neither song nor story on that night to "welcome the coming guest," nor spruce bough couch—nor sheltering tent. Wearily we sought "nature's sweet restorer" 'neath hemlock tree—nor sought we it in vain.

The beauties of the St. John River—the Canadian Rhine—have been referred to by me in previous notes. But just as you cannot see the glories of the European Rhine at such a place as Bonn or on lower Rhine generally, and have to ascend to the Seven Mountains, St. Goar, or Bingen, so you must proceed up the Canadian Rhine to see its beauties—on the principle pointed out by Ruskin—"The spirit of the hills is action, that of the lowlands repose, and between these there is to be found every variety of motion and of rest."

As you ply pole or paddle down this grand St. John River, when you have left behind "wilderness and solitary place," and as you pass picturesque village and smiling farm it is your never-ceasing thought, "here is the place for the emigrant and sportsman; here he can lead a life of comfort and usefulness, and use rod and gun to his heart's content."

Micmac.

## HOW WE WENT DUCKING.

IT was just about this time four years ago that my chum, Tom Miller, and I were enjoying a few days duck shooting at Markell's Cove, a small indentation in the west shore of Lake Cayuga, twenty-five miles north of Ithaca, N. Y. There were so few ducks flying, that we were compelled to go home comparatively empty-handed, but before leaving we had an experience which was novel in the extreme.

We had put up with Mr. Barkell, a jovial old farmer, who seemed to think it his imperial duty to entertain us in the evenings. One night while sitting by the stove cleaning our guns he suddenly said, "How would you fellers like to go coonin' ?"

In the afternoon we called our dogs and tramped through the woods. Though rather late in the season we bagged five plump partridges and two rabbits. And had it not been for a farmer getting after us with a gun, we might have had some quail.

That evening while cleaning our guns, Farmer Barkell entertained us with marvellous stories of coon hunting, concluding by saying, "If you young fellers want'r go 'n' ketch one, I know who'll take yer; en maybe yer kin go t'night."

Ted and I, ever ready for a new experience, jumped at this proposition, and promptly replied that we would like nothing better than to go then and there.

"Wal," continued Mr. Barkell, "ev you'll be git'n' yerselfs ready, I'll go hitch up th' old mare; en we'll then go 'long up th' road a piece 'n' git Possum Joe. He allars knows war th' coons uses 'n' he's got a couple of good dogs that'll find 'em every time."

Within half an hour we were behind the "old mare," and on our way to Possum Joe's. The ride seemed short; beguiled as it was with amusing tales of local gossip. "In that house over yonder by ther cross road," said the farmer, pointing with the end of his whip, "a sweetheart o' mine lives. She's an old maid because o' loven me; and she loves me now as much as she did forty years ago when I was a-court'n her," this last, with a wink and slap on the knee. "When I fust began to cast my eye 'round fer a gal I didn't know which t' take; her or the old woman to-hum, and I ain't altogether made up my mind yit, nuther. I like em both now as much as ever 'n' when my old woman don't want to go ter meeting, I allers stops and takes this air one. When ther both want t' go I takes em—one on either side; I've got two arms, and with the reins throwed over the dash there, I kin put an arm round each. Yer needn't think I don't know how to enjoy a bit o' fun. We're go'n t' have a 'social, t'morrer night; 'n' ev yer'll come 'long with me I'll show yer that I kin kiss a gal or two as quick as eny o' you youngsters."

"What do you do at these 'socials'?" I asked.

"The young folks play 'Wink-en-catch em' mostly; 'n' the old ones, too, for that matter."

"What is 'Wink and catch them' "? Ted asked, as much puzzled as myself.

Farmer Barkell threw back his head with a hearty laugh and said: "You city folks don't play no sech games, but jest yer come along with me t'morrer night 'n I'll show yer what 'Wink-en-catch-em' is. You," turning to Ted, "kin hev the little Dutch gal that lives near, 'n' we'll give our friend here the schoolmarm."

"The schoolmarm?" I exclaimed, "I don't want a schoolmarm; give me a young girl that can dance."

"The school marm ain't old; she's only eighteen and as pretty as a pictur'."

"I'll match you for her," put in Ted.

"Why," continued our driver, "she's called the 'Village Beauty,' 'n' yer'll fall dead in love with her as soon as you set eyes on 'er. But there won't be no dancing, though; we're all Methody's round here. The folks don't dance, play cards, nor ev'n drink hard cider; but, oh, how th' gals kin kiss; thet's what 'Wink-en-catch-'em' is; yer kin kiss all th' gals yer kin ketch. I'll show yer how ter play it t'morrer night ef yer'll come."

Promising we would go with him the following night, we arrived at Possum Joe's cabin. Possum Joe, seated in the chimney corner with feet cocked high above the stove, was fiddling away on a three-string violin. His son, a shock-headed boy of twelve, sat on a box on the other side, vigorously playing a mouth organ. The wife and mother, with arms bared to elbows, stood at the table kneading bread, punctuating her shrill admonitions to the children who were playing on the floor with an assortment of dogs, cats and chickens, with emphatic thuds in the dough.

"How air yer, Joe," said our friend Barkell, "here's a couple o' fellers from C'rnell that wants yer to take 'em coon'n'; kin yer take 'em out fer a run?"

"What! yer don't want'er go t'night, gentl'men? Ruther bright fer coon'n'," replied Joe, as he unlimbered himself from his position at the stove. "These moonlight nights is bad fer hunt'n' coons; the rabbits cross-tag 'em 'n' throw ther dogs off th' scent. But sence yer cum from the city, gentl'men, I 'spose yer want t' go 'n' I ain't go'n' to disapp'int yer. We'll see what we can do gentl'men; we kin hev a try anyway," pulling on his boots while speaking. "Here, Sam, you git th' ax from th' woodpile while I'm lightin' th' lant'n."

Possum Joe ready, we returned to the wagon, and taking the dogs in with us, were driven to the upper end of a gorge, about two miles distant. There Mr. Barkell turned us over to Joe, who, bidding Ted carry the ax and me the gun, took the lantern and led the way into the woods.

Filling our pipes, we sat down on a log to wait until we should hear from the dogs. Twenty minutes later, the long-drawn bay of one of them reached our ears. "Listen, gentl'men, listen," said our guide, "thet's ole Megs a-talkin'; ther'll be some fun now, gentl'men, I bet; she don't never say a word 'cep'n' when she's on ter somethen. Now, gentl'men, jist keep clost ter me, 'n' we'll foller th' dogs es fast es we kin."

With arms before our faces as a protection against the switching of the twigs, stumbling over logs, running into trees, and now and again pitching headlong into beds of leaves, we followed. At last, breathless and panting from our run, we came to a standstill at the brink of a gorge. "Thar ain't no way o' git'n' acrost thar, gentl'men," said Joe, "so we might es well build a fire here ter keep warm til' th' dogs bring th' coon roun'." So saying, he collected an armful of leaves, and in a few minutes we were stretched out at full length by the side of a roaring fire.

"I hope," continued Joe, filling his pipe, "that yer won't be disapp'inted t'night, gentl'men. I've been coon'n' roun' here fer n'y on ten years now, 'n' I 'most allers gits somethen when a-hunt'n' 'em. One night 'bout a year ago, I follered th' dogs n'y all night 'n' last foun' they hed holed a blamed skunk, which made me so 'tarnal mad that I dug th' varment out 'n' shot 'im dead. 'N' ef I hedn't taken a club 'n' battered 'im all up, I might 'av' got some'n' fer his pelt."

"But why did you club after he was dead?" asked Ted.

"Because I wanted thet partic'lar skunk ter know thet ther war retribution arter death fer sech as him."

Entertained thus by Possum Joe's yarns, we had almost forgotten the dogs till we heard their deep-mouthed music in the distance. Catching up gun, ax and lantern, we plunged into the darkness, when, upon running through the underbrush in the direction of the sounds, we found them yelping with baffled rage at the base of a half dead tree.

"I know thet tree, gentl'men," said Joe, hanging his lantern on a neighboring bough, "thet's th' very same tree ez I shot a coon out of winter fore last; now we've got 'im sure. Ef you gentl'men k'lect some wood we'll start a fire so's ter see ter shoot."

The fire built, we peered expectantly into the branches of the tree, but could see nothing but a hole, in which the coon must have taken refuge. "Big job ter fell thet tree, gentl'men, but ev we want'er git 'im out, she's got'er come," said Joe, taking the ax and wielding it like the experienced woodsman that he was.

The tree tottered and fell. With the crash came a cry of savage joy from old Megs as she rolled over and over on the ground holding a large coon in her death grip. In the midst of the confusion came an agonizing howl from Meg's mate. Rushing to the spot, Joe found the hound vainly endeavoring to free himself from the vise-like jaws of another coon. With a blow of the ax the coon was dispatched. Ted, seeing the glittering eyes of still another coon peeping out of the hole at him, ran and clapped his cap over the opening. Then, calling to me, "Come here, old man, and help me 'wink-en-catch-'em." "Hold on, gentl'men," cried Joe, "I'll show yer how ter git 'im; just mind th' hole a minute while I git a gimlet."

Cutting a switch as large around as a man's thumb, and making a series of slashes on either side of one end, he inserted it into the hole. By twisting it continuously in one direction like a gimlet, he entangled the long fur of the coon in the slits of the stick, and pulled out one of the largest we had ever seen.

The next day a severe snow storm kept us within doors. Though disappointed in the weather, we were glad of the rest, and amused ourselves by writing letters and spinning yarns. By night the storm had worn itself out. And the time for starting to the social having come, Farmer Barkell went to hitch up. Ere long we heard his sonorous voice at the door, "geeing" and "whoaing" to the horses. Donning our great coats, and still wearing top boots and hunting jackets, we went out to view our conveyance.

Imagine an ordinary four-wheeled wagon similar to those used for hauling sand or cobble stones, on the bottom of which was a sprinkling of straw and a half dozen robes and blankets of various kinds; at the front end, in place of the board that is generally used for the driver's seat, an old, closely-curtained buggy top, with ropes stretching from each of the upper corners to poles of equal height nailed to the tailboard, over which, and hanging down the sides to keep out the cold, an old sail—and you see the picture that met our eyes.

Farmer Bump lived in a larger house than any of his neighbors. It was there that we were bound. Rattling along over the frozen snow, the springless wagon, aided by the intense cold, turned our teeth into castanets. After stopping at several houses on the road to pick up demure-looking, rosy-cheeked, well-bundled-up maidens, among whom was the schoolmarm, we came at last to Farmer Bump's, where Ted and I were to be initiated into the mysteries of "Wink-en-catch-'em."

Entering the house and getting out of our coats, we were ushered into a large improvised supper room, where, on depositing five cents each at the doorway as our contribution to the feast, we sat down at a long, narrow, board table, and were shortly served with guinea potpie, store cakes and black coffee.

As we were walking out of the room Barkell said, "Ef yer'll cum with me I'll make yer 'quainted with some o' th' folks." Leading the way to a bevy of bashful maidens, he duly presented us to those that we had not met on our way over. "These young fellers is friends o' mine," continued he with a broad grin, his eyes sparkling with merriment, "'n' they want er know how ter play 'Wink-en-catch-'em;' let's all o' us go up stairs 'n' learn 'em."

Adjourning to a bare room over the kitchen whose sloping ceiling was festooned with hams, ropes of onions, seed corn and cobwebs, and lighted at either end by odd looking lamps, the game began. Farmer Barkell, fairly brimming over with anticipations of fun to come, led one of the girls to the middle of the room. Having placed their hands on each other's arms just below the shoulder he called to the pretty schoolmarm to find a partner.

Walking up to me the "Village Beauty" said, "Will you catch me, sir?" As I stepped forward to comply she ran and took refuge behind Barkell. Instinctively feeling that I was to run after her, I started in pursuit. Around and around we circled, using the farmer's coat-tails and his partner's slim waist to aid our efforts. By a quick reverse I had her in my arms, when to my surprise in the most matter of fact way possible she turned her face to mine for a kiss. She then took the position vacated by Barkell's partner, while I went to ask the little "Dutch girl" to catch me. After going through the same gyrations as before, I let her catch me and took "another." It was then my turn to relieve Barkell, while the "Dutch girl" invited Ted to have a chase.

Thus the game continued for an hour. Every chance I had I asked the schoolmarm to catch me, she returning the compliment. While standing alone for a minute, Farmer Barkell came up to me and said: "Say, yer wanter leave a lettle sweetness in that gal o' yourn. Don't yer see that every blamed feller in th' room is jel'us if yer?"

"Well! perhaps I am monopolizing her; am I kissing her more than is my share?" I replied with a smile.

"It ain't cuss yer kiss her so offen, but it's th' way yer kinder linger over them. I s'pose yer git so few in ther city, that yer like to eat 'em when yer have the chance. I guess I'll have ter start anuther game, whar yer'll have ter take the girls es th' cum."

Bidding the girls join hands and form a circle, he called to the men to do the same around them. Passing beneath two archways, made by the hands and arms of men and girls standing at opposite sides of the double ring, the circles revolved in either direction, the players singing the following words to the tune of "Forty-nine Blue Bottles a-Hanging on the Wall:"

Sailing on the ocean, when the tide rolls high,
Sailing on the ocean, when the tide rolls high,
Waiting for a pretty girl to come by-and-bye,
Waiting for a pretty girl to come by-and-bye.

Choose your partner, stay till day,
Choose your partner, stay till day,
For we don't care a rap what the old folks say,
For we don't care a rap what the old folks say.

The oars in the boat and they won't go round,
The oars in the boat and they won't go round,
Till you kiss the pretty girl that you have found,
Then the oars in the boat they will go round.

At the words: "Till you kiss the pretty girl that you have found," both rings stopped. The couples that found themselves nearest under the arched arms, kissed; while the others sang the last line of the song.

Barkell spoke truly when he said that I would have to take the girls as they came. The fact is, I had but few opportunities to take them at all. One time, however, when over a kissing spot, I found myself facing a girl whom I had not met. Ted, seeing me hesitate, sang out: "Take another, dear boy, it won't hurt you." Thus encouraged, I kissed her.

When the game was ended, Ted came to me with a piece of court-plaster over his mouth, and said: "Let's go home; I'm shut down for repairs."

Taking leave of our hospitable host, and several "others" without leave, we found Barkell and left.

* * * *

Among my mail this morning was a letter postmarked Hayt's Corners—cards to the wedding of the Village School Mistress. My face must have worn a tell-tale expression, as my wife asked—"Sweetheart, why that retrospective smile?"

Then I told her the tale you have just been reading.

H. M. NORRIS.

## THE VOYAGE OF THE SKIPPER.

### After Large Sea Bass.

THE same glorious weather continuing, it was too much for the Skipper to sit still and see it go by, and not get out into the open and enjoy it. Although a cold wave was over the land, and some reports were current about a thin film of ice seen on small pieces of water in the neighborhood, still the sun in the cloudless sky tempered the sharp air soon after 9 o'clock in the morning, and made things very pleasant out of doors. The sailboat was accordingly hauled in on the sand, and certain changes and improvements made, and on a glorious Tuesday preparations were completed for a trip down the bay after sea bass.

On the previous Saturday evening men and brethren had appeared at the back door of the house with a noble fish. He must have weighed fully 20lbs. and was still alive. Held aloft and displayed in all his noble proportions, he was a grand sight, and a section of him boiled for the Sunday dinner, and served with drawn butter and egg sauce, fell apart in juicy flakes under the fish knife, and caused enthusiasm in the digestive organs, and made the sense of taste a feeling of joy. Now it is all very fine to see a great fish brought in, and it is an exquisite pleasure to feast on him, with a bottle of good claret in evidence, but the joy of having one struggling at the end of a strong line on a sufficient hook, playing him until he is tired, and just as his nose breaks water gaff him into the boat safely, is something to create ardent enthusiasm, and to be long remembered. And this reminds me of the first time that "Piseco" visited the Skipper at his home on Cape Cod. The morning after his arrival was cold, windy and cloudy, with a fresh east wind. After breakfast over the pipes "Piseco" asked the Skipper if there was anything worth seeing about the place. They walked to the shore and there met Hiram Watts of happy memory, as many of the FOREST AND STREAM readers know, and the party thus augmented trudged through the sand to an old fish house. Throwing open the door there reposed nine beauties of the water, caught the night before in a net, the nine aggregating 650lbs. Noble sea bass every one. But this is not the Skipper's fishing trip.

The boat being sufficiently completed to be navigable, she was dropped down to the landing, and the lading commenced. Elliott and Lawrence, two reputable colored members of the staff, went along to do the work, and navigate the forward end of the craft, and aft was the Skipper, the Clerk who went after birds with the mule in the first narrative, and the housekeeping daughter. The latter with a vivid recollection of many trips on the water, and the great appetites there engendered, had prepared a mighty lunch. There was galore of grub, and the gentle fizz of Appollinaris and ginger ale. The Skipper and the Clerk, aware of the deadly nature of kangaroo bites, had each provided a small flask of antidote in case of being attacked. Lawrence had provided small mullet for bass bait, and shrimp for smaller fish. Lines and sinkers, hooks, large and small, were passed in, and all was in readiness. The gentle daughter was first stowed in a safe place, then the Clerk embarked, and at last the Skipper trimmed the boat fearfully by the stern, as he took his place at the tiller. It was a dead calm with a strong ebb tide. The destination was a point between Hilton Head and Bay Point, where once a great squadron sailed round and round firing on forts on either point as the guns bore, until both were silenced and captured, no more to fire on the Old Flag while the war should last. Here on the last of the ebb the bass was supposed to be, and here the Skipper and his crew hoped to fill the boats to the thwarts with the silvery beauties. As there was no wind there was nothing to be done but to invoke an "ash breeze," so Elliott and Lawrence worked away with the oars, and the tide assisted with its resistless ebb.

Down by the Quarantine Station, and buoys red, black and striped, on down by the beacon lights and all the creeks and banks the tide bore, aud the oars advanced them, until where certain marks and ranges indicated the right spot, the anchor was let go, and a strong salt-water craving demanded lunch. Then pipes and hooks and lines seemed mingled, and the fishing began. Little

bites, little fish, sculpin and a little chap called blackfish, nibbles, and at last the Skipper started a monster from the bottom, pulled him up a fathom or two, and then the hook broke and the fish escaped. The Skipper knew it was a great bass—he knows it now—he would be prepared to aver that it was the largest bass caught this season, but alas! even for a reputation as a teller of fish stories, he cannot lie. G. Washington and the Skipper were cast in the same mould. He just can't lie, so that fish has gone off with a sore jaw, and the Skipper says that he weighed probably several pounds if not more.

The tide began to slack, and nothing but little fish; so leaving the large hooks near the bottom to tempt any stray members of the deep who might come along, small hooks and lines were rigged, and as the balmy see breeze began to come in gentle zephyrs from the south they caught small fish, crabs, small skates, sculpin, etc., until it was time to start for home. So the anchor was raised and the party bade an affectionate farewell to the bass that they had left behind them. They ran into Bay Point, and the Skipper landed on the smooth sand and bagged about a dozen little shore birds, and managed to get stuck in the mud in a soft spot while chasing a wounded bird. Then began a struggle. As the Skipper would pull on one foot it would come out of the boot, and it would be necessary to insert the foot again and pull boot and all out for another step. It was hard work, and the people in the boat afar off were striving to come to the Skipper's assistance. At last he extricated himself and regained the boat, but with no wind left, and it took a large dose of the kangaroo antidote to revive him. N. B.—The bird got away.

After this there was nothing to do but square away for home, which the balmy sea breeze wafted them to before the sun dropped out of sight, tired, sunburned, but delighted with the day's outing and impressed with the belief that the recent Democratic defeat had temporarily depressed the sea bass, and that it was not a very good day for bass anyhow. C. H. Rockwell.

## ADIRONDACK DEER

### And a Maine Camp Hunt.

*Editor Forest and Stream:*

Your correspondent "Matterhorn" complains that he has been called a pot-hunter because he hunts partridges with a rifle. I can fully sympathize with him, being in the same boat, as I, too, hunt partridges with a rifle, but I use the .38cal., for where I hunt there is large game also, and I must be prepared for emergencies. But I only aim for the head or neck. Were I to hunt grouse where there is no chance of seeing larger game, I should use the small-bore rifle. There is no doubt that shooting partridge on the wing is sport if one can do it, but I believe it is equally as much sport and as worthy the art of a true sportsman to hunt up the game and then pick off their heads with the rifle; or if too far away for such fine shooting to plumb them through the body with a small-bore rifle.

I, too, have been dubbed a pot-hunter, because I choose to still-hunt the deer in his own home, and to match intelligence, skill and experience against the quick ear, keen eye and cunning of the wary game; rather than to get into a boat and let the hound do the hunting; and when in obedience to instinct the deer plunges into the water, where at least he thinks he is safe from his enemies, but finds when too late this instinct has been perverted to his destruction; and as he sees my boat approaching his eyes seem starting from their sockets from fright; he plunges frantically this way and that in his efforts to escape, but all of no avail; I am soon on him and at close range send a bullet through his head—why, I would as soon call it sport to go into a sheepfold and butcher an innocent lamb as to murder a deer in this way.

It is true that I can kill twenty deer by hounding where I can kill one by still-hunting, and that, too, without any tramping or skill in woodcraft or shooting. But I do not gauge the sport of hunting by the killing. The securing of game is but a small part of the pleasure I derive from tramping in the woods (nature's temple), following the game with cautious step, and peering into every nook and thicket in anxious hope and expectation.

One hunter openly boasts that he killed eight deer in ten hours last fall. It is just such men as this who would brand the name of pot-hunter on the still-hunter because he does not avail himself of this easy method of killing deer, now sanctioned by law, to the shame of the State of New York. The last hounding season I was made the unwilling witness of the slaughter of deer that made me thoroughly sick and disgusted. Wagon loads were taken out of the woods almost daily. I was told that at one of the Fulton lakes two guides with their hounds drove a deer into the water. One guide stayed with the deer to keep it in the water, while the other went to a hotel near by and very kindly invited an invalid man boarding at the hotel to go out and shoot the deer. But he evidently did not possess the true water-killing instincts, for he declined with expressions of disgust. But what the man lacked in this subtle accomplishment, a woman possessed. A guide rowed her within a few feet of the deer, where with a charge of buckshot she put an end to its struggles for life and thus performed the great sportsman-like act. If this method of hunting is considered the "sportsman-like" way, then I say with "Matterhorn," "Deliver me from the ignominy of the sportsman, and class me with the pot-hunters."

The last ten days of October, 1893, I spent in camp in a back place in the Adirondacks, hoping to enjoy a little quiet. But in this I was disappointed; for although it was the close season for hounding, dogs were running on the ground every day. I was lucky enough to kill two deer, but one of them proved to be unfit to eat, having within a few hours been run by dogs until the venison was black and had a nauseating taste.

Last fall I resolved to try the Maine woods as I have a good winter camp there. I was accompanied by two guides, one engaged by myself, the other by the man who was to be my companion. But at the last moment circumstances prevented his going. This was the greatest drawback of the whole trip; for he was the life of the camp, genial, ever cheerful, enthusiastic over camp life in the woods, looking ever on the bright side of bad luck, and going into ecstacies over a good square meal of broiled venison; but out of the bigness of his soul he sent his guide just the same. These guides were true sportsmen according to my interpretation of the term. No water-butchers, no unfair way of bagging game for them, besides they were noted cooks. One did the pastry and the other the meats.

We arrived at camp about 11 A. M., Oct. 24. A shout of joy went up as we opened the old camp door, looked in and saw everything as we had left it two years ago. We distributed our traps around on the shelves, took a lunch of crackers and butter and started out for meat, myself to hunt partridges and the guides larger game. During the afternoon I decapitated three partridges with my rifle, and flattered myself that I would be the only one, as I had heard no shots. Judge of my surprise when returning to camp, I saw a quarter of nice fat venison hanging on a pole. This was indeed good luck; plenty of venison was assured for the whole time in camp. I saw several deer, but they always got the first shot and were off. I followed a moose into the river but could not find where he came out, although I searched the banks in every direction.

The following day the guides followed two moose into the same stream and followed them up the stream for two miles by their tracks in the bottom and where they would go over heavier dams and driftwood; and they were still in the river when they left. They did not start them. It suggested to me that this may be a habit of the moose. They could not have gone into the river to feed, as there is no food there. The stream had a gravel and rocky bottom all the way; and as neither of those three moose were started, for they were severaly hours ahead of us, I am led to believe that this is a habit peculiar to this animal. Can any one more acquainted with the habits of moose inform me?

We also learned another bit of natural history. At our camp we had two pet Canada jays, or as they are called in the Adirondacks, tallow or venison birds, or meat hawks. They were so tame as to eat out of our hand. They are inveterate workers, and apparently never stop eating so long as they can find anything to eat, and are not very particular about the kind of food. I found that this gluttony was in appearance only. When we threw out a pancake to them, they would attack it at once even if we held it out to them in the hand, biting off several mouthfuls, and storing it away inside somewhere; and with the last bite in their bill they would fly away and deposit it; and in less than one minute would be back for another load. As soon as they reduced the pancake small enough, they would take it in their claws and fly away to deposit it in their storehouse. This they would work from morning until night. This peculiar habit, together with the large amount they stowed away inside their mouth until the neck seemed much distended, suggested to me that they may be provided with a sack opening into the mouth, like the chipmunk and some kinds of mice, as the long-tailed white-bellied woods mouse. Can any one inform me on this point?

We stayed in camp twelve days. The weather was fine, warm and sunny days, although it was unfavorable for hunting big game, as it was dry and noisy under foot, with little or no wind. The guides heard the moose when they started, but could not get near enough to see them. The guides killed three deer, which was all we wanted; and could have killed more, as they were plentiful.

For my business, the weather was all I could wish. I went to the woods to have a quiet rest, to enjoy camp life and the pleasure of tramping in the woods, to shoot off a few partridges' heads, and to have a good time eating venison not hounded to death. I got all I went for, and returned home with renewed strength and mind stored with pleasant recollections, and as well pleased with the trip as if I had killed a dozen deer. Musset.

## "SCANTOGREASE."

*Editor Forest and Stream:*

I believe that many interesting chapters might be written by sportsmen regarding the derivation of names of famous or favorite hunting or fishing grounds. Why can't Forest and Stream take the matter in hand and help history out a little.

In my last "Oregon Notes" I had occasion to mention the "Scantogrease" country. Now it might be of interest to the more intellectual class of sportsmen to know something about the origin of the name by which this now famous country is known to us. Many of our geographical names such as Skamokawa, Seattle, Tacoma, Molalla, etc., are derived from tribes or famous war chiefs of tribes of Indians almost or quite extinct. "Scantogrease" did not derive its name from any such proud source.

In the early days a family settled in that country from Pike county, Mo. The mother soon acquired fame among her few neighbors and the hunters and trappers of that region for the very excellent quality of her pastry. But she was always offering excuses for its not being better, and her favorite excuse was that she was "scant o' grease." Any one familiar with the "hog and hominy" resources of the grand old State of Missouri will naturally sympathize with the good old lady who came from such a land of plenty (of grease) to settle in the wild and woolly West, where hogs were as scarce as hen's teeth, and hominy was an unknown quantity. But be that as it may, the interesting historical fact remains, that from the day when the good housewife left Pike county she was always so scant o' grease that her pastry never did quite suit her, and even the boys that courted her daughters came to speak of their prospective mother-in-law as "mother scant o' grease." As time wore on and the country settled up the peculiar and suggestive appellation stuck to it as a descriptive and distinguishing name. It was the only place along the Columbia that carried the name, no matter how much others might have been entitled to it.

I don't think the name was ever copyrighted, but respect for the good old lady (or the quality of her pastry) protected it.

All the river men knew where it was and no immigrant could miss his destination if he had sense enough to tell the captain that he was bound for "Scantogrease." And that name will stick to that country until time is bald-headed, notwithstanding the efforts now being made by some over-refined, sensitive people to change it.

If it had derived the same name from some greasy old departed chief you couldn't trade them out of it.

S. H. Greene.

Portland, Ore.

# Natural History.

## THE LYRE OF ORPHEUS.

*Editor Forest and Stream:*

Some memoranda in one of my notebooks lead me to ask about a subject on which some of your readers may be able to shed some light, and request them to write you of any observations they may have made on the point.

All big-game hunters know that our wild animals depend for warning of the approach of danger on the senses of sight, hearing and smell. Of these the latter is by far the most important and certain. The animal that catches the hunter's scent never stops to investigate, but makes off at once. On the other hand a deer or an elk may approach quite close to a hunter who is motionless, not recognizing that the man is not some natural object, and sometimes small birds and animals will approach very closely or even run over parts of a person sitting perfectly still. It is evident, as said elsewhere, that these animals recognize danger only in life, and life only in motion. But sometimes large animals, such as deer, elk, antelope and even mountain sheep, to say nothing of buffalo and caribou, decline to recognize danger in moving objects, and it was a common experience in the West a few years ago to have these animals come up quite close to one in the effort to identify him. Much of the primitive hunting of the Indians was based on this well known inquisitiveness.

But this is not the point I have in mind. I wish to inquire about the second of these senses, that of hearing. What effect do strange sounds have upon wild animals? Do they alarm them, or merely arrest their attention, or do they actually attract them?

I have known several cases where men who went out from camp in the early morning to drive in their horses found a bull moose among the horses and close to the bell mare. I know of one case where a small band of mountain sheep were discovered standing huddled together at the edge of the horse herd, all apparently staring at the bell mare and wondering what the strange sound was. In all these cases the observers believed that the animals were attracted by the sound of the bell.

Some years ago a vagrant Scotchman in the Yellowstone Park, who was the possessor of a clarinet, conceived the idea of learning to imitate on that instrument the bugle call of the bull elk. He stationed himself as near as possible to a whistling bull and began to imitate his call. Whether he succeeded in learning the notes or not I do not know; but it was said that all the elk in the neighborhood collected about him to listen to his performance.

I am told of a prospector who was very fond of playing on what is called a harmonica or mouth organ, and who, while traveling through the mountains, stopped to rest and refresh himself with a little music. After he had been playing some time he saw emerge, one after another, from the brush, three white-tail deer, which slowly drew nearer and nearer to him, watching him with an appearance of great interest. They finally approached so close that, as he said, he could "almost touch them," and only went away when he ceased playing. He had no gun and was careful to avoid alarming them.

We all know that it is often possible to stop a running deer or elk by a whistle or by the call of a fawn.

The facts that I have mentioned are isolated and prove nothing, but others may have made observations which may be of interest in connection with them. Can any of your many readers help me? Old Man.

## WILD PIGEONS.

Lockport, N. Y., Dec. 10. *Editor Forest and Stream:* I notice in your issue of Dec. 8, a report of the occurrence of wild pigeons near Rome, N. Y., which reminds me that while stopping at Theresa, N. Y., from Aug. 13 to Oct. 20 last, the local paper reported that parties had seen a large flock of pigeons near Red Lake, which as the crow flies is about four miles from the village. I did not succeed in seeing the parties that saw them, to corroborate the observation. I have but little doubt of the occurrence. The last pigeons I shot was on the east side of Red Lake some twenty years ago, while visiting at Theresa, which was my boyhood home, and well do I remember the immense flocks of these birds fifty years ago, and recall one particular occasion during the spring flight when tens of thousands flew directly over the main street and within ten rods of the center of the village, when hundreds of them were killed with guns, clubs and fishpoles. They flew directly up the river, which at that point is at least seventy-five feet lower than the street. Their flight was so low that they had to rise to clear the street. On the north side of the street were large piles of wood, on which other boys and I climbed armed with fishpoles, and killed many birds. At that time I saw the first single bird shot on the wing by my oldest brother who was armed with the old muzzleloading gun which had been carried through the War of the Revolution and of 1812 and 15, and which had been cut off at least 15in. and changed from flint to percussion cap lock. During a lull in the flight one single bird came up the ravine, which was shot by my brother; and from that day he was considered the best shot of the town.

Since the pigeons that I killed twenty years ago I have seen but one wild pigeon that was shot in this State, and that was taken by Mr. Arthur Lerch about three miles north of this city, May 10, 1883; and was the only one seen at the time. I have it in my collection of mounted birds. There is a small patch of blue on the back and just a tinge on edge of wings, the rest of the plumage is ashy brown. At first I could hardly believe it was a passenger pigeon (*Ectopistes migratorius*).

J. L. Davison.

### New Book on Shore Birds.

Sportsmen as well as naturalists will be interested to learn that there is in preparation a new and completely illustrated volume on the shore birds of North America. Its author is Dr. D. G. Elliott, the ornithologist, whose beautifully illustrated monograph of the Tetraonidæ ought to be in the library of every sportsman in the land, while his volume on the hummingbirds and on other groups have made his name familiar to all students of bird life.

The volume in question is entitled "North American Shore Birds," and will be published by Francis T. Harper

of this city. It gives short life histories of each species of our shore birds, with accounts of their migrations, and will contain keys so plain that any species may be determined even by a novice, and a map of a bird showing every part of its plumage and explanations of the terms used. Full page illustrations drawn by Edwin Shepherd, of Philadelphia, and reproduced in half-tone, will represent each species. The size of the book will be octavo and the price about $2.50. The date of publication has not yet been fixed.

# Game Bag and Gun.

## TEXAS AND THE SOUTHWEST.

### A Responsive Chord.

THE leader in the editorial columns of FOREST AND STREAM of Dec. 1, wherein it proposes to war upon dishonest methods and individuals in trap-shooting has met with general approval as far as the Texas sportsmen are concerned. While trap-shooting is yet in its incipiency in this State, the insinuating microbe of dishonesty has developed and several cases of "skulduggery" if not absolute robbery, disgraces the pages of the shooting history of this State. Not only have individuals proven dishonest in their methods, but entire organizations, presumably organized with honest intent, have been convicted of ways that are dark and tricks that are vain. The sportsmen—the clean sportsmen—in Texas are glad that FOREST AND STREAM has sounded the tocsin. Let no guilty man escape.

### As Bad as a Seine.

The fishing in Elmendorf Lake has been very good this winter. Indeed, the finest string of black bass ever caught in Texas waters was lured from the mossy beds of that fine body of water six weeks ago, and nearly every one who has been fortunate enough to secure the *entrée* into the preserve has had a nice time with the rod. While the discovery that there existed biting bass in the lake has been heralded with delight, and while the fishing has been "dead easy," the pot-huntishness of a certain individual who enjoys the fishing by virtue of his payment of $2.50 toward the "watchman fund" has asserted itself. It may be all right for one to hunt for meat and kill quail on the ground, and it may be all right for one who does not claim a full knowledge of sportsmen's ethics, to drag a seine or otherwise catching fish by methods which are not recognized as fair by followers of Izaak Walton; but that right becomes a wrong when perpetrated by one who is a member of a high-toned gun club and who howls himself hoarse crying for the protection of game.

The facts are as follows: A member of the chosen few who have each paid $2.50 toward a fund with which a watchman has been paid to guard Lake Elmendorf has disgraced himself and his club by "jug-fishing" for bass in the lake aforesaid. He has placed a lot of beer bottles in the lake, to which he had attached a 4ft. line, and has caught a lot of fine black bass through the nefarious device, and has had the audacity to bray about it. Worse than that: the watchman's boy has been doing the same thing and sold the proceeds of his nefarious practice to members of the club at 25 cents per fish.

If the party spoken of was not a member of a gun club, I would not feel quite at liberty to criticise his practice as bitterly as I do, but when a man belongs to an organization that claims to protect game and fish, and employs other than the recognized fair methods for the capture of each, I feel like going for him with a sharp stick. Put him out.

### Geese! Geese!!

From Copano Bay, about eighteen miles from Rockport on the Texas coast comes the word that there is a fine flight of geese, swan and brant twice a day. One man killed twenty-seven one evening over six decoys. The cool weather up north the last few days has driven the canvasback and redheads to their winter quarters, and the shooting on these rare birds is beginning to be good.

### Bluebills on the Nueces.

The heaviest bluebill flight in years is on up the Nueces Bay every morning and evening. The bay water is fresh for about five miles and the birds come off the salt bay where they feed on young oysters to slake their thirst and out again in the evening. The birds are there in thousands but there will be no first-class shooting until very cold weather sets in.

### A Gay Party.

Messrs. Peabody, Burton and Dubois, of Cincinnati, E. Hough, of Chicago and Robt. Merrill, the noted dog man and crack shot of Milwaukee, accompanied by O. C. Guessaz, of San Antonio, have just returned from a two weeks' outing on the Texas coast, where they have been shooting all kinds of game. A full account of the trip will be given in these columns through the facile pen of Mr. Hough, of the Chicago office.

### Quail at Linton.

A personal trip to Linton, 135 miles from San Antonio, on the line of the Aransas Pass Railway, resulted in finding plenty of quail. Five coveys in two and a half hours were found in splendid cover and under the best shooting circumstances. Hotel accommodations and teams galore.

### Deer Hunters.

Messrs. Albert Steves, Otto Wahrmund, Hon. J. L. Slayden and Capt. Ernest August Dosch, all of San Antonio, are enjoying a deer and turkey hunt in the mountain fastnesses of Kerr county. From parties in Kerrville it is learned that the gentlemen are meeting with great success and having a splendid time.

### Javelinas

or better named, the American peccary, has his abode all through the heaviest chapparal of the Southwest. It is a small pig, about the size of a yearling shoat and a mottled gray in color, and a most dangerous animal to hunt. Through Judge McCall of Portland, who has a splendid pack of hounds, it was learned that they are plentiful around Portland on the Texas coast. The Judge has kindly invited the writer on a hunt after the javelinas, and a full account of the experience will be given to the readers of FOREST AND STREAM.

TEXAS FIELD.

## QUAIL HUNTING IN DRY COVER.

BURNSIDE, La., Dec. 12.—Last Saturday afternoon I tore myself away from the factory and spent an hour or two after quail, but with poor success. The weather has been so hot and dry that it is almost impossible for a dog to do any sort of work. There is not a drop of water to be had for the dogs; and if you do not have the luck to find a water-cask out in the field the poor dog soon plays out.

I knew where there ought to be some birds, so I hitched up a gig, and putting the old setter dog into it, started for the field. The first little outing after quail makes a man feel like a school boy receiving an unexpected holiday. I soon reached the field, and over the fence I climbed. Then I put the shells, loaded with E. C. powder, into my old cylinder quail gun. This old gun I scarcely ever use for anything else but quail, and I kill some with it every year. This same old gun will scatter over both sides of a barn at 20yds., and it is just the thing for quail and brush shooting. About the first thing the old dog did was to flush a covey of eight or nine birds, and without caring about me one particle they all safely hid themselves in the windrowed cane. With the next covey I was more lucky. I was standing on the edge of a thicket when I noticed a very large hawk cruising about over the field. Presently he flushed a big covey of quail and straight for the thicket they flew. They lit within about 30yds. of me, and I felt sure of some of them. I talked to the old setter and advised him to be careful. He pointed, up got a quail and down he dropped at the crack of the gun. My dog retrieved him, but did not want to give him up, so nice did the first quail of the season seem to him.

The next bird I missed as he went whirring through the bushes. The next came down when I bid him. Everything was so dry that the poor old dog could not make much out of the scent, so I called my driver, made him cut a good big stick, and put him into the cover, and very soon he had the quail flying in every direction. First he put up four quail, and I got one with each barrel. Then the next quail that got out of the grass I missed with both barrels, although it was a fair, straightaway shot in the open. The next was snapped down almost before he was well under way. After a while the old dog recovered somewhat from the heat and pointed a quail, which I scratched down, and recovered after a chase, which made the dignified old brown meat dog so excited that I was afraid he would have an apoplectic stroke.

Then I tried another field and after much careful trailing and creeping by the dog, the birds flushed wild, but I marked them down and after them I went. After thinking out the direction in which the birds must fly on being flushed, I laid my plans of approach. But the first bird that got up flew directly over my head and directly in line with the afternoon sun. Both barrels were fired, but all in vain. Then the whole covey followed suit. My first barrel was unsuccessful, but the second brought down a fine big cock. I followed up the covey only to have them get up wild, and with both barrels missed again. Then I walked up two stray fellows, missed the one to the left, but cracked over the one on my right. The ground was so dry that I found the dog almost useless, so I gave it up and came home, quite satisfied, however, with the few hours of recreation with the quail.

I think that we will have fine quail shooting now, for yesterday we had the first big rain since last April. We are still killing some deer. Last week we killed one magnificent buck, and on last Sunday we chased a buck, but did not kill. Blount saw this buck when the hounds jumped him, and he says he has a fine set of antlers.

W. P. M., JR.

## MAINE GAME NOT BAGGAGE.

BOSTON, Dec. 15.—The latest railroad move is the announcement made by the Maine Central, that no more moose, deer, caribou, or fish or game of any kind will hereafter be received as baggage. This news comes by special dispatch to the daily papers, and doubtless it is true. Sportsmen are much displeased, so far as I have been able to obtain their views. Heretofore the Maine Central has very kindly forwarded the fish or game of sportsmen, in the legal open season, free of charge, in their baggage cars. There is no doubt but what the present season has shown this road that they have had to do a good deal of transportation for nothing, except the regular fares of the hunters and fishermen. But its passenger traffic is greatly increased by the hunting and fishing interest in that State. It is a safe estimate to claim that at least one-fourth of the passenger traffic of the Maine railroads is due directly or indirectly, to the actual or anticipated sport from fishing and hunting promised there. The Maine Fish and Game Commissioners, in their report, recently submitted to the Governor and Council, suggest that the amount of money brought into Maine by her fish and game interests is over $3,000,000 a year, and they have rather under-estimated its value than otherwise. Now if only one-fourth of this sum goes into the treasury of the Maine Central Railway, it amounts to a very large revenue from the hunters and fishermen, and for that company to suddenly refuse to convey any more game or fish, without extra charge, is looked upon with disfavor by every prominent sportsman whom I have heard express an opinion. The claim is at once set up that the American Express Co. has had something to do with the change, and there is cause for believing that the claim is correct. Sportsmen have been seriously bothered this fall by suddenly finding that their game was in the hands of the express company, when they had left it in the hands of the baggagemaster at the point where they had taken the train. In a great many cases the hunters have been assured by the baggagemasters that their game should go through safely and without cost. In many instances tags have been furnished by baggagemasters, in order that the deer might be tagged with the owner's name and residence, as provided by law. Neither express nor any other transportation companies are allowed to forward game out of the State of Maine unless it is tagged as above; and then it is the property of the man who shot it, and is being forwarded at his risk. Legal gentlemen tell me that under the present law regarding transportation, made to prevent the sending of game out of Maine and into market, there is a doubt as to whether any express or railway company can legally forward game in any other way than free of charge and as the property of the hunter, who must, according to law, be in charge of it.

In each case the express company has insisted upon being paid for the transportation. In some cases the bill has been paid, and in one or two cases the owner of the game has declined to pay, claiming that the express company had taken it without authority. In one case where the express company claimed pay for transportation, the owner of the game positively declined to pay, and the driver of the express took the game back to the office of the company. In a short time he came back and said that "the boss said that if Mr. ——— would sign a receipt he might leave the deer." But Mr. —— also flatly refused to sign any receipt, declining to acknowledge the express company in any way in the matter. After some words the driver left the deer at the hunter's home. Hunters and fishermen are also disposed to ask why it is that the Maine Central cannot bring out the fish and game that they are fortunate enough to take, when some of the Western roads are not only bringing out the fish and game of sportsmen free, but they also carry their dogs free, and give them the best of care. A gentleman mentions especially the Grand Rapids & Indiana Road, over which he had occasion to travel on a hunting and fishing trip a couple of seasons ago. On the train there were a number of sportsmen with their dogs and equipments, and even one or two movable camps. There were four baggage cars in the train and two freight cars, and not a sportsman was called upon to pay a dollar for any sort of transportation.

SPECIAL.

### Summer Shooting In Pennsylvania.

WILLIAMSPORT, Pa., Dec. 14.—*Editor Forest and Stream:* I very much regret to learn that there are a few sportsmen in our State who object to the abolishment of summer woodcock shooting.

The committee on legislation, appointed at the last meeting of the Pennsylvania State Sportsman's Association which met at Harrisburg not long since to make such changes in our game laws as they deemed advisable for the better protection of our game, considered this point in particular and agreed, one and all, that there was more destruction wrought among our young "pheasants" by unscrupulous hunters than could be well calculated; and unanimously agreed that it was one of the most vital points in our game laws. True, there may be some who could refrain from pressing the trigger should a nice young pheasant rise before him, but how many more are there who shoot first and pay their regrets afterwards. There is no one who enjoys a day afield after woodcock better than I do, but surely I would a thousand times rather deny myself this pleasure, than be a party to an act upholding the summer slaughter of our young pheasants.

The committee had hundreds of letters from all points in the State urging one season for all game, and it is to be hoped that the few who want summer shooting, will see the matter in its true light and magnanimously deny themselves a few short hours' sport for the better protection of our king of game birds. I urge you, gentlemen sportsmen of Pennsylvania, to take the matter in hand, and assist this committee in their efforts for better laws.

N. A. HUGHES, Pres.
Penn. State Spts. Assn.

### Opossums on the Main Street.

WINDSOR, N. C., Dec. 11.—Last night, about 11 o'clock, just after a rain, Mr. M., a lawyer, whose office is on Main street and in the most public part of town, was standing in his front door, when his attention was attracted by some animal crossing the sidewalk. He concluded to investigate; took his cane, and on reaching the gutter found a very large and fat opossum, which he proceeded to kill. We suppose the possum had made his home under a stone near Mr. M.'s office and had come out to get a drink of water. This is the second one caught in our town within the last three months.

I have had several days with the quail this season, but do not find them so plentiful as they were last season, the greatest number bagged being twenty-nine in a day's hunt. I notice wild turkeys for sale on our streets almost daily.

A. J. R.

### A Towering Bird.

NEWARK, N. J.—While I was hunting for partridge my dog Nick drew up near a fence well covered with undergrowth and brush, and as I advanced a bird sprang out. I held just ahead of him and fired. He flinched and immediately sprang upward and began to circle around. Higher and higher he mounted. On he went until he was many feet in the air, out of gunshot. Then his wings began to wobble and he came down slowly but surely, landing within 10ft. of the place he started from. On examination I found three shot had struck him just behind his right eye and destroyed his sight, and caused his curious movements. I have shot many birds, but never had an experience like this.

W. F. B.

### Holiday Tours via Pennsylvania Railroad to Washington, Gettysburg, and Old Point Comfort.

THE Pennsylvania Railroad Company has announced the following select pleasure tours, under its personally conducted tourist system, for the holiday season. The destination of each tour offers so much in the way of recreation and sight-seeing that the festivities of the holiday season may be doubly enjoyed by participation in any of them.

To Gettysburg and Washington, Wednesday, Dec. 26, returning the following Saturday. Tickets covering transportation, meals *en route*, and hotel accommodations at Gettysburg and Washington will be sold at the following rates: New York, Brooklyn and Newark, $20; Trenton, $19; Philadelphia, $17.50. Tickets will also be sold to Gettysburg, returning direct by regular trains until Dec. 31, at rate of $12 from New York, $11 from Trenton, and $9.50 from Philadelphia.

To Washington, on Thursday, Dec. 27, returning the following Saturday. Round-trip rates, including hotel accommodations: New York, Brooklyn and Newark, $13.50; Trenton, $12.75; Philadelphia and Wilmington, $11.50.

To Old Point Comfort, Thursday, Dec. 27, returning the following Saturday. Rates, including round trip transportation and all necessary expenses: New York, Brooklyn and Newark, $15.50; Trenton, $14; Philadelphia, $12.50. Tickets will also be sold at the same rates, including luncheon going and one day's board at the Hygeia Hotel, and good to return via Richmond and Washington by regular trains within ten days.

Tickets for any of the above tours from other points will be sold at proportionate rates, and any additional information in regard to the tours may be obtained on application to the Tourist Agent, at 1196 Broadway, New York; 860 Fulton street, Brooklyn; or Room 411, Broad street station.—*Adv.*

### Prairie Chickens.

RECENT reports received by the Chicago, Milwaukee & St. Paul Railway from stations in the prairie chicken country of Minnesota and South Dakota all indicate a prospect of the best hunting for years. Chickens are very plentiful and in fine condition. Duck shooting prospects are also good. Full information can be had by addressing Ticket Agent, Chicago, Milwaukee & St. Paul Railway, 207 Clark street, Chicago.—*Adv.*

# Sea and River Fishing.

## ANGLING NOTES.

### About Black Bass.

In a recent note in this column I mentioned the circumstance of a "bad black bass" caught in the very act of eating its own young, and said: "I cannot yet think it is the habit of the black bass to eat their own young if other food abounds."

I have just received the Bulletin of the U. S. Fish Commission for 1893, Vol. XIII., which is made up of papers read before the World's Fisheries Congress in Chicago, at the time of the World's Columbian Exposition, and in it I find a very interesting and instructive paper by Mr. Wm. F. Page, superintendent of the Neosho, Missouri, station of the U. S. Fish Commission, upon "The Propagation of Black Bass in Ponds."

Conclude what we may about the habits of fish in wild waters where they are not absolutely under control for constant observation at different seasons and under varying conditions, the result must consist in a measure of speculations, but fish in confinement and under direct observation at all times may be studied in a way to obtain positive conclusions regarding certain habits, provided the confinement does not change their habits. Mr. Page has drawn the conclusions narrated in his paper from observations of black bass under the last mentioned conditions, and it is presumably safe to say that what has been found true of the habits of black bass in the Neosho ponds will apply to the habits of black bass in wild waters.

Premising that the fish under observation were the large-mouthed species of black bass I quote as follows from the paper:

"It may be asked, if bass are such excellent parents and accomplish the high rate of impregnation which some writers ascribe to them, where is the necessity of putting more than a few adults in a pond, letting these alone, and later harvesting a crop of young? To such a question I would answer, that after the dispersal of the school, unless food of an acceptable kind be present in abundance, an adult bass does not stop to examine the birthmarks of a straggling youngster which may cross his path. There can be no question but that the largest part of the young so zealously guarded early in the season later furnish food for some adult bass, possibly its own progenitor. Again, the bass are like the trout, in that every school furnishes its example of giants, which make short work of their weaker brethren. In the autumn sorting of the spring crop, left undisturbed through the summer in the nursery pond, three and sometimes four sizes of young bass will be found, the largest of which show by their very size that they have been guilty of fratricide."

It has been asked over and over how fast do young black bass grow. Mr. Page answers this question in regard to the young of the big-mouth in his ponds: "The average length of six months' bass at Neosho is 3in., though I have frequently seen them of the same age measuring from 8 to 10in. Whoever has seen a black bass choked to death by trying to swallow one of equal size, will not doubt that the 8-inch fellow will diminish the number of the 3-inch fishes."

### Does Male or Female Guard the Nest?

A belief exists that the male black bass and not the female guards the nest while the eggs are hatching, and afterward broods the young. I was about to say that this was a general belief, but I remember that those who think in this way, when their writings are examined closely, are very guarded about making a positive statement in regard to it. Mr. Mather observed this habit in the male sunfish, and as the sunfish guards its eggs I think he assumes that in the case of black bass, also a nest-guarder, it was the male fish that acted as guard.

In 1891 I watched a pair of rock bass on their bed or nest and they spawned July 24. After that date I saw nothing more of the male fish, but I watched the female daily until Aug. 8, and twice took her from the nest to make sure that I was watching the right fish. The male was present on July 23 and 24, but I did not see another fish of any kind around the nest up to the time the young were hatched on Aug. 8. On the two occasions when I took the female from the nest I removed her some distance before returning her to the water, but inside of ten minutes she was back on duty. I reported my observations to Mr. Wm. P. Seal, then in charge of the aquaria of the U. S. Fish Commission, and in his reply he said:

"In any species of fish the habits of which have not yet been observed, we can only reason from analogy, but I know of no fish which protects its eggs with which it is not the male that 'rocks the cradle.' With the sticklebacks, the darters, the sunfishes so far as I have noticed, catfish, the paradise fish, the common toadfish, the blennies, the little seahorse and pipefishes, it is the male which attends to these affairs, being a complete reversal of the usual order regarding reproductive methods. This might be accounted for by the greater vitality of the male, and the necessary greater exhaustion of the female after spawning. * * * It is an interesting subject, and we know very little yet. We want great aquaria established on correct principles where we can study them."

At the time that I found the spawning rock bass I was looking for beds or schools of young of small-mouthed black bass in a very cold lake where the bass spawn late, and before and since that time I have endeavored to settle the matter to my own satisfaction as to which parent guarded the nest and young of the black bass (small mouth). In one instance, when I learned that pairs of black bass were confined at spawning time in small ponds in Canada, I tried to find out which of the parents stood guard, but it was apparent that the sex had not been observed up to the time that I wrote, but Mr. Page has something to say on that subject:

"The eggs are viscid and attach themselves as soon as voided and impregnated to the floor of the nest. Then commences a parental devotion worthy of imitation on the part of some higher animals. For a time I was under the impression that the female deserted the nest and the male fish took charge. From closer and more extended observation I am now of the opinion that the female is in direct charge, while the male acts as an outer sentinel, patrolling 8 or 10ft. away. There is nothing smaller than a man that a bass won't attack when on duty guarding a nest, and there is nothing smaller than a man who attacks a bass at this time. Prior to the hatching of the eggs the female stands guard directly over the nest, maintaining a gentle motion of the fins for the purpose, it is thought, of providing a change of water over the eggs. When the fry leave the eggs the tactics of the mother fish are changed. She no longer stands guard over the nest, but circles around the school, whipping back truants and driving off intruders." Unless Mr. Page's observation on this subject should be controverted by later and more extended investigations, I think that it must be admitted that it is the female and not the male black bass which guards the nest and broods the young, and I imagine that what may be true of the large-mouthed bass in this respect will prove to be true of the small-mouth.

### Vitality of Black Bass.

During the past ten years or more I have repeatedly urged that black bass should not be introduced into any water unless, after due deliberation, it was found beyond a peradventure that the fish were suitable for the water, and *vice versa*, for once introduced it would be impossible to remove them; but I must confess that I believed that drawing the water off would accomplish this object, and very recently I wrote to a correspondent that the only way he could get rid of black bass in a small pond was by drawing the water entirely off. It seems that even this will not do it, and again I quote Mr. Page: "Under fright the bass will burrow into the mud and live there an incredible length of time. Some years we used a pond for bass one season, and when it was concluded to use it for shad the following season, it was drawn off in the autumn to harvest the young and thoroughly rid it off bass. Unusual precaution was exercised to remove every fish. The pond was left empty for three weeks, exposed to the frosts and winds of November, until the mud was dry and crossed checked. The pond was then filled, and in December 200 tons of ice were cut from it. To make assurance doubly sure, the pond was again drawn in the following April and left empty for ten days. The young shad were introduced the first week in June. By the 1st of August other fish than shad were jumping for flies in the dusk of early morning and evening. One hundred and fifty bass, averaging half a pound each, were captured from this pond, from which all the bass had been so carefully removed. There were no means within the limits of reasonable probability for 150 fish to have gotten into this pond, except by having burrowed in the mud and lived there for several weeks while it was drying."

It may be said that while such astonishing vitality may be displayed by the large-mouth black bass, a fish with predilection for the mud and ooze, it could not be true of the small-mouth, but I think it is more than a dozen years ago that I wrote something akin to Mr. Page's narrative, only my story was about the small-mouth. Briefly, it was this. The father of Pension Commissioner Bentley had some small-mouth black bass in a spring. The spring dried up, and as the bass disappeared with the drying up process it was supposed that the bass had been stolen, but upon digging down to find water the bass were found burrowed in the mud, which, however, had not become dry. All of which means, do not plant black bass unless you wish them to stay with you, even after you become tired of them.

### How Some Fish are Planted.

The applications for fish fry made in various States to those who have the matter in charge must present some amusing reading, if the reader's bump of humor is well developed.

This morning I was asked by an applicant to aid him in filling out a blank for black bass, and the number of fish asked for (for one lake) was equal to the whole number of black bass distributed by the State in all its waters in one year. This matter, however, only served to remind me of another application. A gentleman told me that he had made application for, and had been promised, a lot of landlocked salmon fry.

Naturally interested in the subjects, I questioned him about the water in which he intended to plant them. Personally he knew little or nothing about it. He believed it was a small pond 20 to 25ft. deep, but he knew nothing of the temperature of the water. He knew little about the fish already in the pond, and nothing about the opportunities for the salmon to spawn. As to food for salmon there were plenty of minnows for them. He did not know that salmon were a deep-water fish in summer and required deep-water food, nor anything about the temperature in which they could live and above which point they would die, but he was an earnest man greatly interested in stocking the waters with fish and in fish protection after the waters were stocked.

If a census could be taken of all the fish fry lost, and I do not refer to any deficiency between the number charged and the number delivered, but lost because well-meaning men put in fish fry where nature never intended they should go, and where they cannot thrive, I imagine it would be astonishing to the general public. Fish Commissioners throw such safeguards as they can around the fish which they have to distribute, and make every effort to know about the waters in which the fry are to be planted, but after all they have to trust somewhat to the judgment of the applicants and much to the answers made to their questions.

By deficiency between the number of fish fry charged and the number delivered, I had in mind such as may actually die in transit, but I did see one shipment of a lot of lake trout fry, said to be 500,000, and if the others were like it the shipment was probably 150,000 to 200,000 short of the number charged. This was not because the fry died, but because they were not in the cans to start with. Hatchery shipments of fish fry are supposed to go over rather than under the number charged, and in many instances I suppose they do, but it makes little difference whether they do or not if the water to which they are destined is wholly unsuitable for the fish, and they are lost in consequence. As a rule applicants for fish see to what are called game fishes—salmon, trout and black bass, no matter what the conditions of water and food may be. Trout may fail in waters that would sustain some excellent food fish, such as the bullhead and yellow perch, but generally it is the game fishes and not the food fishes which are sought, and so fish and water area are both wasted.

### A Game Fight with a Game Fish.

Mr. C. E. Durkee, who was for many years the superintendent of the Adirondack Railway running north from Saratoga into the Wilderness, told me recently of a fight he once had with a trout in the North Woods. We met at a friend's house at dinner and the story was told after the dinner, and I made not a single note concerning it, but I'll warrant that I now relate it as it was told by my old friend.

Mr. Durkee was a guest at Camp Pine Knot, the North Woods domain of Mr. W. Durant, and was one day fishing for spotted trout in Mohican Lake, which is part of Mr. Durant's preserve. Requiring some minnows for bait, Mr. Durkee and his guide rowed to the mouth of an inlet stream to catch them. Mr. Durkee was using a steel rod, and finding that the tip was so pliant that he did not hook the minnows with certainty, he removed it and tied a piece of line to the second joint of the rod. The rod was thus about six or seven feet long and the line about a foot shorter, and on it was a minnow hook. For minnows the hook was baited with a piece of a dead minnow. A sufficient number of minnows being obtained, the guide pushed the boat out into the lake near an old treetop, while Mr. Durkee still retained his baited minnow hook and rod in his hand.

Idly he threw the small bait into the water and it was taken by a large fish, and "there he was."

Rod and line together were not over 14ft. in length, and the minnow hook was tied to fine gut. The fish was active, and it required all of Mr. Durkee's skill with the rod and the guide's skill at the oars to prevent a smash during the first flurry. The lake is shallow, fortunately, and the downward rushes of the fish repeatedly took the rod and the angler's arm into the water to his shoulder, but the angler tired before the trout, for it was a trout, ond the guide took the rod to rest him. Mr. Durkee again resumed the rod, and finally the trout was brought up, when the guide succeeded, after several attempts, in getting his fingers into his gills, and the fish proved to be a lake trout of 16lbs. weight.

### Monster Trout of the St. Maurice Club.

It is quite fitting that after recording Mr. Durkee's catch I should state that I have a letter from Dr. W. H. Drummond, of Montreal, in regard to the catch of brook trout made in 1894 by members of the St. Maurice Club. I give his letter nearly in full: "Reading FOREST AND STREAM to-day my eye caught sight of your comment regarding 'St. Maurice trout report for 1894.' That the club members caught during the season '668 brook trout, weighing 1,920lbs ,' is perfectly true.

"Lake Wayagamach where headquarters are situated, and where practically all the fish are caught, is over fifty miles in circumference, and contains 'brook trout,' running from 2½lbs. to certainly 6½lbs.

"I have heard many stories of lumber men catching through the ice much larger trout, but personally 6½ is the largest I have seen. Three pounds represent, I should say, the average weight, and there is only one point on the lake, at or near the dam (outlet), where 1 to 2lb. fish are caught. Wayagamach is really a wonderful lake." Wonderful but half expresses it, and the St. Maurice Club, so favored of the gods, should change the name of the lake, unless, as I now suspect, that Indian name really means "Angler's Paradise." A. N. CHENEY.

### The Sunapee Saibling.

CHARLESTOWN, N. H.—*Editor Forest and Stream:* I am glad to note my friend Cheney's cumulative evidence as to the utter ignorance respecting saibling in Sunapee Lake previous to 1881. It was this ignorance on the part of my old friends Powers and Woodbury, both accomplished anglers, who had fished the lake for years, which led Dr. Quackenbos and myself to think that it might be a hybrid from the native *fontinalis* and the winninish put in in 1877. The discovery of the same fish later in Dan Hole Pond, however, crushed that explanation. Now, may it not be that the saibling, which are principally fish-eaters, have been thriving on the young fry of the winninish and the *fontinalis* which have been planted, and thus have shown an abnormal increase, while the results from the continuous plants have certainly fallen far short of expectations?

I think Commissioner Hodge first discovered the spawning grounds of the saibling in 1885, and it seems strange that some one of the thousands who have explored the lake within the last hundred years should not have seen them before, if they were as plentiful as they now are. Commissioner Hodge said he saw "acres of them."

I am glad to learn from Mr. Cheney that our Fish Commissioners are to move in the matter of restoring the close time for trout to May 1, where we fixed it a dozen years ago, and to inform him that Vermont has passed a law adopting the same date.

We got such a bill through the House in our last Legislature, but it was killed in the Senate, who voted "inexpedient to legislate."

I hope New York may adopt the same date for all waters north of the Erie Canal, but believe the date would be better for the whole State, except Long Island. The 15th of April in some years is too early for Pennsylvania.

There is no doubt that trout will bite in April some years, if not all, but the reason is that they are half starved and hungry, and I prefer to wait until they are fat and lively. Almost all our open seasons for game of all kinds begin too soon and last too long, and the extermination of the game, including fish in the word, is the consequence.

What you say about the New York Fish Commission is true and well said. Politics, so called, has in many ways been the curse of the State and city of New York.

VON W.

**To the Retail Fishing Tackle Dealers.**

WE beg to announce that we have withdrawn the sale of our Automatic Reel from the lists of the jobbing trade, and that for the season of 1895 we shall deal with the retailers direct.

We have been compelled to take this action on account of the "cut prices" quoted on our reels by most of the jobbers, who in consequence created an unprofitable competition among the retailers.

In order to remedy this condition of affairs we shall sell direct to the retailer, but under no circumstances will we fill an order unless we have the retailer's assurance that our goods will be sold at strictly *list prices*. We feel that we, as manufacturers, have the right to prevent the demoralization of prices on our product, and we hope to receive the retail trade's approbation of our protest against trade demoralization.

We remain, with the season's compliments, yours very truly,
—*Adv.* YAWMAN & ERBE.

# Fishculture and Fish Protection.

## The New Brunswick Convention.

THE inefficiency of the game and fish laws of the State of New Jersey, to properly protect the game and fish of that State, has induced the sportsmen of New Jersey to take steps to remedy the evils alluded to. The publishing of the following notice in the issue of FOREST AND STREAM for Dec. 8 sounded the call:

For many years there has been general complaint of the inefficiency of the game and fish laws of New Jersey to protect the game and fish to any appreciable extent. In spite of State and individual efforts to stock forests and streams, pot-hunters and other unscrupulous individuals have been able to disregard the laws with practical impunity.

The New Brunswick Gun Club at a meeting recently held took the initiative in a movement looking toward the adoption and enactment of adequate laws. It was decided to hold a convention in this city in Voorhees Hall, at 12 o'clock noon Dec. 15. An invitation will be sent to each gun club in the State to send two delegates. The Brunswick Club will bear all the expense except the transportation of delegates. It will be the purpose of the convention to recommend to the commission recently appointed by the Legislature such changes in the game laws as will serve to protect the game and also to provide means of detecting and punishing infractions of the law. The local club has elected W. S. Gummere, of Trenton, and George A. Viehmann as delegates.

Delegates from 8 out of the 21 counties in the State were present, the roll call showing 25 delegates in attendance at the convention. A committee of one delegate from every county represented, with Mr. Joseph Fisher, secretary of the New Brunswick Gun Club, as chairman, was appointed, to present the views of the sportsmen of the State to the Game and Fish Commissioners, who meet at Trenton on Jan. 5 next. This committee was enlarged so as to include one delegate from every county in the State, so as to insure full representation.

The convention was badly divided on the question of the open season for woodcock. The northern section wanted it to open not later than Oct. 15, the southern section holding out for Nov. 1.

It was the unanimous opinion of every delegate that deer hunting should be forbidden until Nov. 1, 1897, and that it should then open for only 15 days in that year, and in every alternate year thereafter.

The most important business was the formation of a permanent organization to be known as the New Jersey Game and Fish Association, an organization whose duty it should be to look after the propagation and protection of game birds, animals and fishes within the State.

THE PROCEEDINGS IN DETAIL.

In response to the call given above, the following gentlemen were present when the convention at New Brunswick, N. J., on Saturday, Dec. 15, was called to order: George A. Viehman and Henry H. Stevens, New Brunswick Gun Club, New Brunswick, Middlesex county; Harry L. Stout and Jos. L. Chamberlain, Flemington, Hunterdon county; W. S. Sawyer, Middlesex Park Gun Club, Middlesex county; E. P. Dicky and J. V. D. Ten Eyck, Somervile, Somerset county; C. W. Winter and George H. Cramer, North Branch, Somerset county; George Hooker and Charles Lowe, East Side Gun Club, New Brunswick, Middlesex county; George E. Snook, Kingston Gun Club, Middlesex county; S. G. Smith and S. F. Lillig, Seaside Gun Club, Atlantic City, Atlantic county; R. C. Griscom and J. W. Clark, Atlantic City Gun Club, Atlantic county; Jas. L. Smith and Nelson S. Mitchell, Hackettstown, Warren county; J. L. Crowell and A. B. Cook, Rahway, Union county; W. R. Hobart, South Side Gun Club, Essex county; B. S. Wrightmyer and Richard Farr, Dayton, Middlesex county; John Jelleman and A. Totten, Passaic City Gun Club, Passaic county. The list shows a total of 25 delegates present, representing in all eight counties.

In the absence of W. S. Gummere, Mr. Viehman was made chairman, with Harry L. Stout as secretary.

The following characteristic letter was then read:

NEW YORK, Dec. 11.—*New Brunswick Gun Club:* GENTLEMEN—I see in the FOREST AND STREAM that you have called a meeting for the 15th at your place to get the different views before framing a law for the coming season, and for enforcing it. My home is in a place where we have no club and I have been obliged to fight alone against the law-breakers, so as to protect what little game there is left. I have personally stocked our streams and have let go thousands of quail, and yet I am obliged to go away from home to have a little sport when the open season comes, as all is killed during the September or October shooting. My home and farm is located in Parsippany, Morris county, and there ought to be lots of game there but for this killing out of season. In the summer I am there a good deal and I have given a good portion of my time to bringing those to trial whom I have caught; when my busy season comes then is when they get in their unlawful work.

If I could have a little help from a gun club, or from the State, I am sure I could protect this natural place for game and have the finest shooting that there is in the State. I only wish there was a club in my vicinity so that I could join it and have some one to help me to do what any true lover of the gun should do. I am perfectly willing to do all in my power, both in time and cash, to improve our game laws and enforce them; you have my hearty wishes in your good work. Yours truly, E. E. BALDWIN.

Considerable applause greeted the reading of Mr. Baldwin's communication. Letters from William Elder, Sec'y of the Chatham Game and Fish Protective Association; Andrew B. Brickner, Sec'y Newton Gun Club; W. F. Bailey, Newark, and others were also read. The convention here adjourned to the Mansion House where they enjoyed dinner as guests of the New Brunswick Gun Club.

On the convention reconvening a committee consisting of one delegate from every county present, was appointed to go before the Game and Fish Commission at their annual meeting on Jan. 5, at Trenton, and acquaint them with the views of this convention as to the open seasons on game and fish in this State.

The following were chosen from the counties represented at the convention to form that committee: Harry L. Stout (Hunterdon), E. P. Dickey (Somerset), R. C. Griscom (Atlantic), Jas. L. Smith (Warren), Fred'k. C. Marsh (Union), W. R. Hobart (Essex), John Jelleman (Passaic), and Wm. S. Gummere (Middlesex).

The committee was empowered to add to its number one delegate from each county that might hereafter join in the movement.

The chairman stated that he would now entertain the views of each delegate on the present open seasons, and as to what he desired these open seasons to be changed to.

The chair appointed a committee of three to draw up an order of business for the convention to act on.

The committee made the following report, adding their suggestions as to the open seasons it recommended:

1. Consideration of open season for quail, rabbit, ruffed grouse, squirrel, woodcock, English pheasant and English partridge. Dates recommended by committee, Nov. 1 to Dec. 15.

2. Open season for deer. Recommendation by committee, that open season for deer in this State close until Nov. 1, 1897; then to be open for fifteen days until Nov. 15 inclusive; open seasons of fifteen days in every alternate year thereafter from Nov. 1 to Nov. 15 inclusive.

3. Spring shooting. Committee recommended that the open seasons for duck, English snipe and baybirds be left as at present.

4. Out-of-State sportsmen.

5. Permanent organization.

An expression of his opinion upon the open season for quail, rabbit, ruffed grouse, squirrel, woodcock, English pheasant and English partridge, as recommended by the committee, viz., Nov. 1 to Dec. 15, was asked for from each delegate in turn. Messrs. D. G. Smith, Lilly, Griscom, Clark, Hobart, Stout, Joseph Fisher (who voted for the chairman), Hooker, Lowe, Wrightmyer, Farr, Stevens, Ten Eyck, Crowell and Cook, expressed themselves as favorable to the above close time. Mr. Chamberlain said he was in doubt as to what they were voting upon, but said that so far as he was concerned he would vote "favorable" if that vote was not considered final. Sawyer (Middlesex) thought the open season was too long; he voted Nov. 15 to Dec. 15. Messrs. Jelleman, Totten, James L. Smith, Mitchell, Snook, Dickey, Winter and Cramer all went on record as opposed to the season opening as late as Nov. 1. The first expression of opinion thus stood, 15 in favor of the uniform season commencing Nov. 1 and ending Dec. 15; 9 against, and 1 (Chamberlain) practically non-committal.

In explanation of their votes several of the delegates addressed the chair briefly:

MR. JELLEMAN—I am against the open season on woodcock and quail not commencing until Nov. 1 for two reasons. In the first place it would rob us in the northern part of the State of almost all our woodcock shooting, as the birds begin to move south before that date. A delegate from south Jersey has said that some quail are often too small to shoot by Nov. 1. In our part they are ready by Nov. 1 at the latest; that is my second contention.

MR. TOTTEN—All the northern part of the State will coincide with us and demand an earlier date on woodcock than Nov. 1; otherwise we won't get any woodsock shooting to amount to anything. It would be pretty rough on us to expect us to raise the birds, take care of them all summer, keep pot-hunters off, and then for you people in the southern part of the State to have all the fun.

MR. DICKEY—If you'll only knock squirrels out of that recommendation I'll vote in favor of it. If you put squirrels back until Nov. 1 you're putting them way too late; squirrel hunters can't do much with them after the nuts are off the trees. I think they should certainly come in not later than Sept. 1. Squirrels are my particular game, I'm fond of hunting them either with shotgun or rifle, and I don't go much on your grouse, quail or woodcock. Give me my squirrels and I'll vote "favorable."

MR. TENEYCK—I want to see woodcock protected, but Nov. 1 is too late for us, still I'll vote "favorable" if it'll help matters.

MR. JAS. L. SMITH.—I'm a northerner, and as such am not favorable to shutting off woodcock shooting until Nov. 1. It's far too late for us; such fall shooting as we've had this year during the month of November doesn't occur once in 10 years. Still I'm not favorable to woodcock shooting; birds shot in the heat of the summer months often spoil before they are gotten home. As for squirrels, once the nuts are off the trees it's no use going after them; occasionally one gets a dog that will tree a squirrel, but not often. I don't want the season on quail, grouse or rabbit shortened. With a season of 6 weeks, a man who can only get out once a week, which is as much as most of us can spare, has but six days shooting during the whole year; surely that's little enough.

Mr. Mitchell indorsed his fellow delegate's remarks.

Mr. Cook, who voted "favorable," said—"There ought to be a uniformity in the open seasons for the game mentioned, I am, therefore, in favor of the dates recommended by the committee. All squirrel hunters are unfortunately not like Mr. Dickey who I fully believe does not shoot, and would not shoot, any game bird or animal out of season; but there are hundreds of pot-hunters, who go out into the woods to shoot woodcock in July and squirrels later in the season, and shoot everything that gets up before them, whether it's a quail, rabbit or ruffed grouse. If the pot-hunters are debarred, by means of a uniform open season, from carrying a gun in the woods or swamps until it is lawful to kill any game bird or animal, then I believe it will do away with the majority of this killing of game out of season."

MR. SMITH (Warren)—We do not propose to have the northern part of the State shut out to suit merely the southern part.

MR. CROWELL—Would Oct. 15 be a suitable date for commencing your open season on woodcock?

MR. SMITH—That would certainly be better.

MR. CHAMBERLAIN—Mr. Chairman, I don't see that we've accomplished anything at all by our meeting here to-day. For my part, I don't understand at all what we are proposing to do. Recommending things to the Game and Fish Commissioners won't do us much good. The State has appropriated year after year large sums of money to be expended on the fish and game of this State; Mr. Stout and myself have been trying for years to get some information as to where this money goes, but we can get no information at all. Our laws, too, I am told, have been tinkered and tampered with until no lawyer can tell us where we're at. If we really want to accomplish anything, let us move in the direction of a large appropriation for the propagation and protection of game birds, animals and fishes, and let us see to it that that money is spent on the object for which it is appropriated. Cutting out summer woodcock shooting and still leaving gunners free to hunt upland plover, is going to do us very little good, if any. I think we ought to consider the open season on plover; if we leave the close season on them until Nov. 1 we won't get any of them. (A Voice—"No, you won't be able to get near them.") No, sir, there won't be any of them for us to shoot at; they will have gone south long before Nov. 1.

MR. DICKEY—When I was a boy at school we used to be taught that we couldn't do two things well at once, yet that is what Mr. Chamberlain seems to want us to do. Let us settle one thing at a time, not two; let us settle this question of fall shooting. If the majority of shooters in this State want to keep us from hunting squirrels before Nov. 1, I'm with them, and won't kill a single squirrel until the law says I may. (Applause).

MR. CHAMBERLAIN—It seems to me that this matter of summer shooting properly comes up before fall shooting. I want to begin at the top, not half-way up, or at the bottom. What I want to know is what we're going to have before I vote finally on this question. Personally I've done a lot for game and game protection in this State, and have turned down quantities of quail (loud applause), but what I want to know is what it is proposed to do in the way of stopping summer shooting so as to protect the quail, etc., that it is suggested shall not come in until Nov. 1.

Mr. Totten (Passaic) moved to amend the report of the committee by making the open season from Oct. 15 to Dec. 15. The amendment was lost by a vote of 6 to 17; the following voting in the minority: Messrs. Fisher, Dickey, Winter, Mitchell, Jelleman and Totten.

Mr. Smith (Warren) then moved to amend the report of the committee by striking out the word "woodcock." On Mr. Dickey's suggestion the words "gray squirrel" were also added to the amendment. The roll call showed 10 for the amendment and 14 against; this amendment was also lost. Yeas: Messrs. Stout, Chamberlain, Dickey, Winter, Cramer, Smith (Warren), Mitchell, Jelleman, Totten and Stevens. Nays: Messrs. Fisher, Sawyer, Hooker, Lowe, Snook, Smith (Atlantic), Tillig, Griscom, Clark, Crowell, Cook, Hobart, Wrightmyer and Farr.

The original motion was then made that the report of the committee be adopted; the roll call showed fourteen yeas to ten nays; those who voted yea for the amendment voted nay for the original motion.

Mr. Chamberlain then made a motion that the open season for upland plover should be during the months of August and September. Mr. Totten moved to add, as an amendment, the names of rail and reed birds. The amendment was accepted by Mr. Chamberlain and the motion was duly carried.

Mr. Sawyer introduced the question of the open season for wood-duck, which birds he claimed were not fit to be killed at the time the season now opened. The motion not being seconded it fell to the ground.

The recommendation of the committee in regard to the open seasons for deer was unanimously adopted.

The chairman then addressed the convention. He said that it seemed to him that everything should be carried out on an amiable basis, and added such was the wish of the New Brunswick Gun Club, which had called this convention together. From what he had heard Messrs. Smith (Warren), Chamberlain, Jelleman, Totten and others from the northern part of the State, say to the convention, it appeared to him that there was a good deal to be said on behalf of an earlier season on woodcock at least. The delegates present should remember that it must necessarily be a give and take matter.

A motion to reconsider the action of the convention in regard to the vote on the committee's suggestion, with a view to open the season on Oct. 15 instead of Nov. 1, was made; the motion was lost by a vote of 12 to 11.

MR. FISHER—From what I've heard I think it would be better for the committee of eight already appointed to try and get a delegate from every county to join them; then let them meet and discuss this matter prior to Jan. 5, on which date let them meet the Game and Fish Commissioners at Trenton and tell them what New Jersey shooters want; I make a motion to that effect.

The chairman, in support of Mr. Fisher's motion, thought it a very proper suggestion as only eight out of twenty-one counties in the State were represented in the convention. The motion was put and carried unanimously, as was also Mr. Hobart's motion to make Mr. Fisher, as secretary of the New Brunswick Gun Club, chairman *ex officio* of that committee with authority to call it together as soon as convenient after he should have called for a delegafe from each county to be present at this meeting.

The chairman then left the chair for the purpose of making a motion that the convention proceed to form a permanent organization under the title of "The New Jersey Game and Fish Association." The motion was seconded all over the hall, and was carried unanimously amid applause.

The following officers were elected to serve for the ensuing year: President, Jas. L. Smith, of Hackettstown, Warren county; First Vice-President, G. A. Viehman, New Brunswick, Middlesex county; Second Vice-President, R. C. Griscom, Atlantic City, Atlantic county; Secretary, Harry L. Stout, Flemington, Hunterdon county; Treasurer, W. R. Hobart, Newark, Essex county.

Convention adjourned to meet at the call of the president for the purpose of adopting a constitution and by-laws, the secretary, Harry L. Stout, being instructed to prepare same for submission to the delegates at the next convention.

EDWARD BANKS.

## The Pennsylvania Fish Protective Association.

PHILADELPHIA, Dec. 15.—The regular monthly meeting of the Pennsylvania Fish Protective Association was held Saturday evening, Dec. 8, at the rooms, 1020 Arch street.

While the elements were not particularly inviting or conducive to a full meeting, they failed materially to dampen the spirits of these beneficiaries of Waltonian principles, as attested by the usual large attendance. A special committee, intrusted with the duty of securing more desirable quarters for the Association, submitted several available locations for consideration.

The wide dissemination of the work of the Association through the continued co-operation accorded by the press, was commented upon by the press committee.

The movement inaugurated by the Association for the establishment of a city aquarium and lecture hall for the education of public school children upon the propagation and protection of food fish, continued to meet with public approval.

The committee on ichthyological and biological instruction, having same in charge, reported that the necessary aid from the State would proably be accorded at the next session of the Legislature. Philadelphia, like London, Brussels, Naples and New York, should maintain a public aquarium and lecture hall, made attractive with aquaria and other facilities, where public school children could attend lectures of a practical kind, not so much upon the scientific bearing of the question as its domestic side. Teach the boys how to fish properly and the girls how to cook them. In this we verge upon higher ground. The lad who is taught to compassionately release fish too small for the table, will not be long in recognizing wanton cruelty wherever seen. With such a general knowledge of their value extended, much may be predicted for the future protection of food fish.

The prospective location of a government hatchery near the Zoölogical Garden was again discussed and commended, the location being particularly valuable in consideration of the fact that 50,000 school children visit the garden yearly. Prompt measures were taken to render such assistance to fish wardens as may be necessary to secure the conviction of several reported violators of the fish law.

The subject of the codification of the fishery laws was then considered at length and placed in the hands of the joint committes of law and protection of fish to formulate a bill embodying such changes or improvements as will secure the better protection and preservation of food fish in this Commonwealth, suggestions that may be submitted by the general public will meet the careful consideration of this committee, and it is hoped with the co-operation of the State Board of Fishery Commissioners to secure the favarable attention of the Legislature to this work.

Nominations as follows: President, H. O. Wilbur; Vice-Presidents, Edwin Hagert, Dr. Bushrod W. James, Howard A. Chase; Secretary, M. G. Sellers; Corresponding Secretary, J. Penrose Collins, Treasurer, Wm. S. Hergensheimer; Executive Committee, Henry C. Ford, Geo. T. Stokes, C. H. Fitzgerald, W. P. Thompson, Cyrus S. Detre, J. A. Sypher, Col. John Gay, Henry A. Ingram, F. W. Brown, Dr. W. W. McClure, Geo. W. Reader; Trustees, Collins W. Walton, R. M. Hartley, Bernard L. Douredoure.

M. G. SELLERS, Sec'y.

## Stocking with Rainbow and Brown Trout.

CALEDONIA, N. Y., Dec. 5.—*Editor Forest and Stream:* On Nov. 26 I captured in our wild stream a rainbow or California trout weighing 9lbs., and it was a splendid specimen of the *Salmo iridcus*, as clean and bright as a fresh run salmon.

There are a great many clear, cold lakes in our Eastern or Atlantic States, without an outlet, or even with a very small stream as outlet, readily screened, that can be stocked with this variety of trout to good advantage.

I have communications from different persons, from Maryland to Newfoundland, telling me of the splendid specimens they are sometimes taking from their waters, and the fine game qualities they possess This 9lbs. rainbow trout with three brown or Von Behr trout captured this summer and fall in our stream, make the combined weight of the four fish 39¼lbs., which speaks volumes in behalf of the small brook trout they had eaten in the last six or eight years. As we try to keep our stream well stocked with the native brook trout, we feel very glad that they are out. The stream contains nothing in the minnow line and will not average over 20in. deep. In this connection let me quote from a let-

ter received last week from Mr. R. A. Brehm of St. Johns, N. F.:

St. Johns, N. F., Nov. 21.—*J. Annin, Jr.:* Dear Sir—Our committee decided we would want our annual lot of rainbow trout eggs, and also some brown trout eggs. We would also like to obtain smelt, shrimp or black bass if you think they can be shipped here successfully. Several rainbow trout were caught last spring, one of 6lbs. weight. You know it is only four years sirce I obtained the first eggs. We were very successful with both rainbow and frostfish eggs you sent the past season, the percentage of loss was very light, and all were successfully planted.—R. A. Brehm.

The waters stocked in Newfoundland were lakes.

J. Annin, Jr.

### Genesee Valley Association.

Rochester, N. Y., Dec. 14.—*Editor Forest and Stream:* The annual meeting of the Genesee Valley Fish and Bird Protective and Propagating Association will be held at Rochester, Jan. 9. Frank J. Amsden, Sec.

# The Kennel.

## FIXTURES.

### DOG SHOWS.

1895.

Feb. 19 to 22.—Westminster Kennel Clu nineteenth annual show, at New York. James Mortimer, Supt.

Feb. 26 to March 1.—Mascoutah Kennel Club, at Chicago. J. L. Lincoln, Sec'y.

March 5 to 8.—Western Kennel Club Co., at Denver, Col. E. T. Welant, Sec'y.

March 5 to 8.—City of the Straits Kennel Club, at Detroit. J. W. Garrison, Sec'y.

### FIELD TRIALS.

Jan. 14.—Pacific Coast Field Trials Club, at Salinas, Cal.

Jan. 21.—United States Field Trials Club's Trials B, at West Point, Miss. P. T. Madison, Indianapolis, Sec'y.

Feb. 5.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.

Sept. 10.—Manitoba Field Trials, at Morris, Man. John Woolton, Manitou, Sec'y.

## POINTS AND FLUSHES.

[*By a Staff Correspondent.*]

### Hotel Rates.

Field trials have necessarily their business features and sportsmen have a worldwide reputation for liberality. This liberality may sometimes lead to their pecuniary loss from imposition. But one of the most unaccountable features in connection with field trials is that pertaining to hotel rates. A theatrical or other party, at almost any hotel, can get special day rates. Any of the hotels in the smaller cities, and for that matter in the larger cities, have lower rates for guests who stop by the week, and lower day rates for parties. But at field trials, the established order of things is discarded. A big party or a long stay makes no difference, if it is by sportsmen.

And Newton was no exception. The leading hotel, the Newton House, charged $2 per day to sportsmen, whether the stay was a day or a week or more, during the trials. Not because the house was crowded beyond its capacity, but just because, seemingly, it was a meeting of sportsmen. This hotel had a nominal weekly rate of $10 per week before and after the trials, but a rate which was really much less to local parties. I was informed by parties who were reliable and had every means of knowing that this same hotel had boarders at $10 and $11 per month, thus securing for a month what the sportsman paid for at the rate of $56.

Just why a sportsman should be charged a higher rate at a field trial than the regular rates, not to mention a reduced rate at all, is worth inquiring into. It may not be a matter of importance to some sportsmen, but to many the matter of expense is a matter of grave consideration. In any event, there is no reason whatever why the rates should be increased instead of lessened. Would it not be a matter of ordinary business precaution for the secretary, in the interest of the owners and handlers, to arrange such matters before the trials began?

### Field Trial Routine.

Field trials have fallen into fixed channels. There is a uniform sameness about all of them which no doubt tends to lessen their attractiveness.

There are the regulation stakes, the Derby and the All-Age. Sportsmen, who are familiar with field trial matters, on looking over the published entries of the All-Aged stake, weeks before the trials can see the names of many dogs which have previously run in many trials. The competition loses its novelty. It is in part a twice told tale. There is a monotony about it which ceases to attract.

At the Eastern trials there was a great deal of informal discussion in respect to having a drag hunt from the grounds to town every evening after the day's competition ended. The idea seemed to be popular. It seemed to awaken a great deal of latent enthusiasm. Mr. Avent promised to bring a pack of hounds for the purpose, if the idea was approved by the club. The local liveryman seemed to catch the spirit of the occasion and promised to have some good horses for the huntsmen. Alas, the poor horses! But of that, a year later!

A rabbit hunt, too, with the colored population as beaters and hunters, with all the noise and riot appertaining to the sport when so conducted, was considered. If Mr. Coster could awaken to the occasion he might, from the sentiment of the people, gather features which would infuse greater interest into the greatest dog-and-gun event of the East.

Under date of Dec. 12, Mr. J. B. Stoddard, Newton, N. C., writes me that "There is to be a field trial here this week. There are ten natives entered, entrance $1, and everything is to be conducted *à la* Eastern." Let the good work go on.

I have received a letter from Major J. R. Purcell, in which he courteously but firmly assures me that Lady Margaret, in the two-hour race at Newton, N. C, did not flush the second bevy, but pointed it. contrary to the reports. B. Waters.

New Orleans, La.

### The Use of Morphine.

*Editor Forest and Stream:*

If dog owners would understand the use of hypodermic administration of morphine they would save many a dog. To a dog or puppy howling with pain from gripes or indigestion, morphine may be given until the dog becomes quiet, as often as once in half an hour. I have given repeatedly ⅛gr. of morphine combined with 1-200 of atropia to a pup only two or three months old, and never with but the best results. The canine race take kindly to morphine, and it takes large doses to kill them. Once I tried to put an old greyhound, who had passed his usefulness, to his long sleep and gave him 10grs. He woke up next morning feeling quite chipper. If a knowledge of this will save some dogs from misery, and often their lives, I, as a dog lover, will be satisfied, Medicus.

Brooklyn, N. Y., Oct. 4.

### Bummer.

He is a dog with not even a remote claim to good looks or renowned family ties. Not a single feature of his roughly-cast doggy organism can be called handsome. About thirty pounds of homeliness, his body is long and his legs are short. His thick, clubby tail is carried high aloft with gentle gaiety. A short, wiry coat, in color white with a few black splotches, rather accentuates the rough casting of his form. Yet he is sturdily built, and a lot of good health seems to dwell in his rugged body. Mild in manners, gently peaceful and unobtrusive, he inoffensively devotes his time to his own business in maintaining an humble existence. His peculiar oddities and absence of conventional habits of living, gained for him the friendship of the stablemen, so they called him "Bummer."

Whence he came no one knows, no one cares. He appeared unceremoniously one day and took up a tentative abode in the large and fashionable livery stable which he has since made his domicile. He made no obtrusive bid for attention. He seemed to feel his own homeliness and absence of favorable individuality.

His looks indicated that he was of cosmopolitan ancestry, and his manner that he was an humble dog from the humble walks of life. He showed mild habits of inoffensive vagrancy, probably from hard seasons of enforced hustling for his own living, wherein his brains and teeth were his only stock in trade. No doubt but that his homelessness was compulsory, since dogs do not take up aimless and predatory itinerancy from choice.

His ugly frame contained one of the biggest and most affectionate hearts that ever beat in a dog's chest. Always pleasant and pleased to be noticed, he was a favorite with every man in the barn.

To such of them as would be friendly with him he gave his unselfish allegiance. In return he expected no more than what would come from their generosity; for no one owned him, and he could not hope to be protected from imposition and abuse as could the dog who was so fortunate as to be scheduled as property. Contentment with things as he found them seemed to mark all his acts.

Two dogs legitimately claimed the stable as their home before the intruder arrived; both were of proud blood, one an Irish setter, the other a collie. Bum, as he was called for short, quickly made friends with them. Their rich coats and typical forms were in strong contrast to his own nondescript qualities.

Bum's homely, bony face had a kindly expression on it always, for friend or stranger. When spoken to, he would assume a jaunty sprightliness, simultaneously with a pleasant wag of his heavy, perpendicular tail, and would give a friend all his attention; but if it were a stranger he would unobtrusively and pleasantly go on with his own purposes. He showed his affection in a passive, undemonstrative manner, more by seeking the quiet companionship of those he loved than by seeking the caresses which most dogs so eagerly claim. Indeed, even in his associations with the setter and collie, he was always amiably deferential.

In their little forages about the neighborhood for such tidbits as were unguarded or rejected by the good housewives, he acted more as a sympathetic companion than as a recognized member of the party. He always looked to them for information as to what they contemplated next. He could interpret their very motion. When there was a change of plan and action, he keenly watched his companions, his mouth drawn back, ears pricked, and a most benevolent and sympathetic expression on his face the while. Immediately on their purpose becoming manifest, he would cheerfully and promptly acquiesce and engage in it with earnest diligence.

Yet, withal, in the stablemen's affections, he was a very formidable rival of his more favored canine companions. His *blasé* ways and unobtrusiveness, and perhaps, too, his loneliness and odd nature won their liking. Anyway, he was accepted as a part of the stable community. Odd he truly was; he had no favorite nooks in which to repose; in his quiet way he seemed to be a part of every plan; he never seemed to expect any attention unless it was tendered; and he accepted his food as the bounty of a generous master.

Among the stablemen was a coachman whom we will call Pete for the purposes of the story, and also because that really was his name. In the unoccupied intervals of time the stablemen would often sit in front of the stable, which fronted on a busy street of Chicago. Pete had once been a middle-weight prize-fighter, was still in the vigor of youth and was looked upon by his companions as being mighty in a "scrap," though he was a peaceful man.

One evening Pete was sitting in front of the stable enjoying a rest and the refreshing coolness which came with the evening shadows. Bum was stretched out to his full length on the sidewalk in a happy state of innocent slumber. His long, heavy tail had lost its mannerisms, and a mechanical grin of contentment was set on his plain features.

A tall, well dressed man was leisurely passing by, when his attention was suddenly directed to the sleeping body of Bum. Then happened two things, or rather several things, which illustrated some curious phenomena of human nature good and bad. The sleeping form of poor Bum appeared to arouse a malicious streak in the man's disposition, if perchance his whole nature was not ill-ordered and mean.

He turned short from his course so that he was near the unconscious form of the sleeping Bum, and gave him a powerful kick, The act was simply the expression of a nature given over to malice and meanness. No purer act of cowardice could be conceived.

Pete jumped to his feet and uttered no word of expostulation, but he gave the offender a glittering right and left on the jaw, which sent him reeling, then came a powerful punch in the stomach, and then his departure was accelerated with sundry kicks and objurgations, all delivered with a force, spirit and vivacity which left no doubt of their zeal and sincerity. Bum was not seriously injured. He has not been kicked since.

Yet it all was a strange reversal of the accepted traits of the respective classes of society represented. The well dressed gentleman was impelled to kick the inoffensive dog and the avenger was an ex-prize-fighter. According to all social beliefs, the merciful sympathy should have been shown by the well-dressed gentleman, and the coarse brutality should have been shown by the stableman.

B. Waters.

**A Stray Shinplaster**

**Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.**

*The* Forest and Stream *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

### My Dogs.

*Editor Forest and Stream:*

I have always liked a good dog. When a boy on the farm the dog was my constant companion, and long before I was old enough to safely handle a gun, if old Zeno or Cap were with me I considered myself more than a match for any raccoon, ground hog, skunk or porcupine that crossed our path. Many a time have I spent a half-day in digging out "Mr. Groundhog" from under a log pile in order that old Cap might reach him, or climbed the highest hemlock in the woods to shake "Mr. Coon" down where the dog might meet him on equal terms. Speaking of my dog Cap, the companion of my boyhood days, I might say that he was just a common dog. He had no pedigree, no pride of ancestry, and his name never graced the books of any kennel club, but he was an all-round good dog. Full of good sense, he would hunt anything you wanted him to, and hunt it well. He would run a fox or rabbit until caught or holed, and he would sit under a tree up which he had treed a coon and bark until some one shot the coon or shook him down so that he might finish him himself.

Old Cap made my boyhood days brighter and better when on the old farm, and I have never forgiven the neighbor who shot him, and all that saved him a good licking was that he was older and bigger than I. It is a mighty mean man that will kill a good dog without a good cause.

Later on in life, when I had become the happy possessor of an old Harper's Ferry musket with which I could kill a wild pigeon, a pheasant or a fox as far as I can do now with my best breechloader, I became the owner of a pair of dogs. They were given to me by a neighbor, as he could not take them with him to the West. He called them Fannie and Dick. Fannie was jet black and Dick, her puppy, was pure white. These dogs would not weigh over 15lbs. apiece; but they were bred and raised where all kinds of game was plenty, and they would hunt and tackle anything in the woods from a chipmunk to a wildcat. I have known them to start a fox at daylight and run him all round and over the farm, until I had to forsake my plow, go to the house and get old Harper's Ferry and kill that fox purely in self-defense. But I remember once when Fannie and Dick met their match. It was one September morning when the squirrels were ripe. I had taken the old guns and my dogs for a day with the blacks and grays on McCortney's Ridge. In crossing a new ground clover field close to the woods I spied a hornet's nest bigger than my hat. It hung to a bunch of sprouts. I looked at it a moment and then concluded to riddle the nest with a load of shot. Fannie and Dick were close to my heels, where they stood until the shot, when they broke for that hornet's nest. The fight was of short duration, for the dogs, after doing their best, broke for the woods to escape their tormentors. It was the only time I ever saw them whipped, and they were suspicious of me all the rest of that day. Fannie fell from a load of hay one day and broke her hip. I splinted it up for her and cared for her until she grew well and strong, and in after years when I had left the old farm and would go back to visit it, Fannie and Dick would meet me at the end of the lane and tell me in a hundred ways that they were not ungrateful and that they could not forget a friend.

A few years ago while hunting deer in the Alleghanies, a hound ran a deer by me. I tried to get a shot at the deer but failed; then I tried to catch the hound, but with no better success. I afterward purchased her for $5. She was a black and tan foxhound, and so far as I know had no royal blood in her veins. After hunting her during the winter I bred her to a good common hound, and sent her to the country to a farmer friend to raise her puppies. I succeeded in saving three of the litter; I kept the most promising one.

Grouse was fairly plenty near the farm and as soon as my puppy, Dan, was old enough to run a rabbit or a fox he went to the woods daily with old Fanny for a chase. When Dan was eight months old he could run a fox equal to any old stager. A better scout and starter I never owned; but like my old dog Cap, he too met an untimely death. A fox that he had driven hard all morning took refuge in a flock of sheep that belonged to a little souled farmer who shot my dog supposing he was after his sheep. I would have paid for every sheep the poor wretch owned rather than have him butcher my dog, for he left him to linger and die where he fell on the trail of the fox. I don't like that farmer.

Some ten years ago a friend of mine purchased a pair of tan-colored puppies. They were a cross between a staghound and a foxhound. He sent them to the mountain home of our old friend, Jim McCreery, to be raised and trained for our fall hunt. From the time those puppies were old enough to travel they followed old Jim and his hunting dogs in their tramp through the mountains. Our first hunt with these puppies was in October, when they were only nine months old. In their very first chase they drove a buck from Winter's Ridge, that dropped to Bill Reams's gun. That chase and the taste of blood made them keen for the hunt, and the next day I saw them fight a wounded bear on Robert's Run, equal to veterans. I have seen and handled a good many deer and bear dogs, but I never have seen a better pair of hunters than those two dogs, Dan and Cal, though they had no pedigree and were raised in the mountains on corn mush. I have owned other dogs, bird dogs, foxhounds and beagles, dogs with pedigrees, and just common dogs like "Nessmuk's" Pete, and so far as my observation and experience goes, everything else being equal, the dog that is bred among game and taught to hunt as soon as he is old enough will be the better dog. You may breed your hunting dogs as fine as silk, and unless they are taught to work and to work early, the chances are they will be a failure. I have but two dogs left now, Jack and Fannie. Jack is my faithful old foxhound, as true as steel. But he is getting old and his battles with wildcats and his chases over these mountains have told upon him. But Jack shall be cared for in the future for his faithfulness in other days, and I shall ever remember him as good, kind and true. Unlike Jack, Fannie boasts of blue blood and a pedigree. She is a beagle, kind and intelligent and true, and if any of the readers of Forest and Stream are fond of music and a good time, and they will come here when the rabbits are ripe I will convince them that a thoroughbred beagle with proper training is the very best rabbit dog that can be found. Frank G. Harris.

Clearfield, Pa.

### Kent Elgin vs. Strideaway.

The following is a copy of a challenge sent to Mr. E. O. Damon, the owner of the pointer Strideway:

Birmingham, Ala., Dec. 13.—*Mr. E. O. Damon, Northampton, Mass.:* I will pit Kent Elgin against Strideaway for a three hours' race, to take place immediately after the Southern trials in February, for $300 a side, to be run under U. S. F. T. Club's rules. Each side to select a judge and the two thus selected to select a third. No reporter, owner or representative of any sportsman's paper, or official of any field trial club to act as judge. One hundred dollars to be posted at once by each side, the balance paid in the night before the race. As my dog has not been worked at all this season I must make it conditional that you accept at once, as the time for his preparation is limited. T. T. Ashford.

Mayor A. D. Stewart, of Hamilton, Ont., is also secretary-treasurer of the Hamilton Jockey Club. Mr. Stewart, it is said, will run for a second term, and there is every prospect of his re-election to the Mayoralty.

### Worms in Puppies.

MANY persons, even competent authorities, maintain that the intestinal worms found in puppies at a very early age, and that frequently prove fatal to them, are already existent in the puppy at its birth. Certainly much has yet to be learned as to the mode of infection of young puppies and the conditions of the growth of the worm (*Ascaris marginata*) under natural circumstances. Its life history, unlike that of the liver fluke in sheep, has still to be written. Professor Penberthy, of the Royal Veterinary College, has contributed some valuable "Clinical Notes" to the last number of the *Journal of Comparative Pathology*, among which is one on "Ascaris Marginata in Puppies." Among numerous other cases which have come under his observation, he in one instance made *post mortem* examinations of five litters belonging to the same owner, and in each there were immense numbers of the parasites in the intestines. In one case there were numerous small worms in a two-weeks-old puppy. In answering the question, "How do the young dogs become infected?" Professor Penberthy remarks that, from the fact that the natural habitat of the parasite is the intestine, and that in all probability the growth and development of the swallowed ovum or embryo takes place there, in the mature animal, it is unlikely that either passes *in utero* from the birth to the fœtus. He is disposed to the view that the embryos are swallowed during the early life of the puppy, and, as then the whole sustenance is gained from the milk of the bitch, that the ova or embryos are taken from the teats or the hair. That the ova may pass into the lacteal veins, and thus enter the stomach through the milk, as some think probable, appears to me as untenable as that they infect the fœtus *in utero*. For the present, until something more is known of the life history of the parasite, Professor Penberthy's explanation of the mode of infection appears the most reasonable of any. His theory is fortified by the statement that he has found the most successful treatment and preventive measure that which included the cleansing and disinfection of the udder, etc., of the bitch, with the view of removing or destroying the ova or embryos from the teats and surrounding hair. To this undoubtedly should be added frequent change of bedding, and absolute cleanliness and disinfection of the material on which the bed rests. Regarding treatment of puppies known to be infested, Professor Penberthy says fatal effects are often produced by giving large doses of purgative medicine, as castor oil, or of powerful alimenthetics. In several instances within his experience the difficulty of rearing puppies on account of the presence of worms, which sometimes prove very serious, has been overcome "by dosing the bitch with vermifuges and by rigorous cleansing and disinfecting of her and her surroundings."—*Morgan Evans in The Field (Eng.)*.

### Work for Terriers.

*Editor Forest and Stream:*

Will you kindly let me know where I could get some practical and reliable information regarding the nature and habits of muskrats? I am especially interested in knowing what would be the best method to hunt them with terriers, also as to the best time of the year to do this. Could it be done in the spring, and do you or some of your readers happen to know of any place where these animals are especially plentiful and where the nature of the ground is such as to give the terrier a fair chance to get at them? Could ferrets be used successfully if required? Undoubtedly some of your readers have had experience in hunting muskrats with dogs.

I do not see why, with plenty of muskrats (or other game), suitable grounds and a few game terriers, one should not be able to enjoy capital sport. As it is, there are but few terrier owners that keep their dogs "for work," and "bench show glory" seems to be their only object. The pleasure that can be derived from good hard-working and game terriers seems as yet but little understood in this country, and I feel certain that the introduction of this sport would greatly help to improve and retain the characteristics and constitution of the various breeds of terriers, without interfering in the least with their bench show qualities, the importance of which I fully realize. It would, I believe, make terriers more popular and give pleasure and satisfaction of the right sort, to man and dog.

Although a great deal has been written and published about sport with terriers in England, one hardly ever hears of it here. I therefore believe that you would oblige many of your readers, and especially terrier men, if you would invite them to offer suggestions (through your valuable paper) as to the best and most practical way of using terriers on game and vermin, such as we have in this country, it being of course understood that such suggestions should be based on actual experience. I do not need to say that by "sport with terriers" I do not refer to the killing of tame, domesticated or semi-tame creatures, but to legitimate sport and genuine work under and above ground, in fields, marshes and woods.

TERRIER.

BOSTON, Mass., Dec. 4.

### Inductive Reasoning in Dogs.

A WRITER in a contemporary says that "inductive reasoning is never shown in animals." Such an assertion is very wide of the mark, when applied to dogs at any rate. Many instances of such reasoning have come within the ken of dogmen, and the author of "Dartmoor Days" in his memoir of that grand old sporting parson, John Russell, of Devonshire, England, in describing the reverend fox hunter's strain of wire-haired fox-terriers, relates an anecdote of Tip, one of the cleverest terriers in his kennels.

"'Do you see,' he said (Russell), 'that dark patch of hanging gorse hemmed in on the northern side, by yonder knoll? Well, I've seen many a good run from that sheltered nook. On one occasion, however, I had found a fox, which, in spite of a trimming scent, contrived to beat us by reaching Gray's Holts, and going to ground before we could catch him. Now those earths are fathomless and interminable as the catacombs of St. Calixtus. They are so called Gray from the old Devonshire name, signifying a badger, a number of those animals having long occupied that spot. Consequently, such a fortress, once gained, is not easily to be stormed, even by Tip or the stoutest foe. Again we found that fox a second time, and while the hounds were in close pursuit and driving hard, to my infinite surprise I saw Tip going off at full speed in quite a different direction.

"'He's off, sir, to Gray's Holts. I know he is,' shouted Jack Yelland, the whip, as he called my attention to the line of country the dog was then taking. That proved to be the case. The fox had scarcely been ten minutes on foot, when the dog, either by instinct or, as I believe, by some power akin to reason, putting two and two together, came to the conclusion that the real object of the fox was to gain Gray's Holts, although the hounds were by no means pointing in that direction. It was exactly as if the dog had said to himself, "No, no; you're the same fox, I know, that gave us the slip once before, but you're not going to play us that trick again."

"'Tip's deduction was accurately correct, for the fox, after a turn or two in covert, put his nose directly for Gray's Holts, hoping, beyond a doubt, to gain that city of refuge once more, and then to whisk his brush in the face of his foes. But in this maneuver he was fairly outgeneraled by the dog's tactics. Tip had taken the short cut, the chord of the arc, and as the hounds raced by at some distance off, there I saw him,' continued Russell, 'dancing about on Gray's Holts, throwing his tongue frantically, and doing his utmost by noise and gesture to scare away the fox from approaching the earth. Perfect success crowned the maneuver, the fox, not daring to face the lion in his path, gave the spot a wide berth, while the hounds, carrying a fine head, passed to the heather and after a clinking run killed him on the open moor.'

This old dog, we are further told, scarcely ever missed a day with the hounds for several seasons, never appeared fatigued, though he occasionally went from fifteen to twenty miles to covert, that is, to the meet. He died at last from asthma in the Chorley Earths, Russell having dug up to him and the fox in half an hour, but to his master's great grief the poor old dog was quite dead. Many of our readers, no doubt, have noted instances of reasoning similar to Tip's in some of their dogs, more intelligent than others, and it is only by giving publicity to such occurrences we can prove to the unbelievers that which they are unwilling to admit.

### The Netherwood Farm Sale.

AFTER a pleasant ride of about an hour from New York we arrived at the pretty little station of Plainfield and were soon on our way to the Netherwood Farm Kennels, a little more than a mile away. Here we were met by "Billy" Tallman and his partner Mr. Wheeler.

The kennels are pleasantly situated near Mountain avenue and facing the south. A building some 135ft. in length comprises the main kennel, with innumerable windows on both sides and skylights on top, affording plenty of light and air. The runs, of which there are ten, are about 80ft. long, and in these the dogs are exercised at least seven times a day. The sleeping quarters are raised some 6in. above the level of the floor and about 2ft. above the ground, insuring absolute dryness in all kinds of weather. Everything about the building was clean and not the slightest odor of any description was noticed. Mr. Phœbus has immediate charge of the dogs, and to say they were looking well and strong is putting it mildly; in the eighty dogs now in the kennels there is not one which could not be benched immediately, if necessary, and Messrs. Tallman & Wheeler are to be congratulated on having such a man in their employ.

The sole privilege of shooting on the mountain west of the kennel was recently obtained, and here it is that Mr. Tallman has a great advantage over other kennels near New York to break and handle dogs under his care. In all, it is one of the best, if not the best, appointed boarding kennels in the immediate vicinity, and a place where the most fastidious person could send a dog and feel assured that it will receive the best of care and attention. The sale, as far as prices are concerned, was a failure; the best dogs were sold for less than half their value and others were taken down for want of a bid.

## DOG CHAT.

In the English *Kennel Gazette* Mr. W. Arkwright, whose name is familiar to all pointer and setter men the world over, in his report of the pointers which he judged at the Scottish Kennel Club show, remarked that the pointers were an indifferent lot. Many of them showed the hound cross, while those of the pure type were shy and appeared ill at ease in the show ring. Coming from such a source, *Stock-Keeper*, Eng., took occasion to say that this amounts to public condemnation of the type that is now winning all over the country, and that the existence of the character of the foxhound in the modern pointer is being repeatedly pointed out by the old sportsmen, and further that it is to be seen in modern illustrations as well as on the bench. This led Mr. Arkwright to write a letter to that journal which is sure to stir up the pointer men. "I am convinced," Mr. Arkwright remarks, "from my own experience that the foxhound cross has proved disastrous to the sporting value of those families of pointers into which it has been introduced, as might indeed be expected when one considers the very different branches of sport in which the two breeds are used." In dogs that he has tried, having a dash of hound blood in them, he has found that where they will work, that they take much more breaking than those of the pure strains, being unruly, uncertain, jealous of backing, hare-chasers and seekers after footscent in preference to body scent, almost devoid of bird-hunting ambition and so slack-mettled as to be practically useless. There are exceptions, of course; but there is no certainty in breeding from them and mentions in this relation Col. Thornton's Dash, one of the earliest and most celebrated of these hybrids got by a foxhound from a pointer bitch, though himself excellent, never sired a single puppy good for anything.

He blames modern dog shows for this fresh infusion of hound blood, owing to efforts of exhibitors to elongate the muzzle and put alien "smartness" into the pointer's legs and feet, and says the fanciers have succeeded in separating the show dogs from the workers pretty effectually. As a cure for this severance Mr. Arkwright has made a proposal to the Pointer Club that they should test the dogs of members every spring on game and award certificates, free of charge, to deserving dogs, and that all special prizes for the show bench be limited to the holders of these certificates.

His ideas of what a pointer should be are as follows:

The pointer is a somewhat lightly built, symmetrical dog, with a capacious round skull and full round eye, a pronounced "stop," a muzzle of fair length and slightly inclining upward, nostrils large and open, "flews" fairly developed and fine, ears set high on his head, fine and of fair length; his expression must be gentle, but gay. A long, clean neck, long shoulders, deep chest, ribs well sprung, nicely arched loin, well bent stifles, elbow points and hocks well let down, short, straight stern, with thick bone at the root, gradually tapering to a point, coat dense and hard, but smooth as glass, straight forelegs of clean, oval-shaped bone, pliable pasterns of fair length, a hare-shaped foot, with narrow, arched toes, and the ball of the foot but slightly developed, are also necessary to a perfect pointer.

Hound blood, Mr. Arkwright says, is shown by a narrow skull, absence of stop, a small, sunken or oblique eye, a muzzle inclining downward, a grave, somber expression, coarse flews, low-set ears, coat long, coarse, and (in particolored dogs) of two lengths, stern fuzzy, or gaily carried, round bone in forelegs, short, stiff pasterns, straight stifles, cat feet, *i. e.*, short toes and round, full pad. For a practical test he proposes that six pointers of the type he upholds should run next spring against six typical bench winners, the judges to be instructed to base their decisions solely on natural aptitude for work, nose, pace, game-finding instinct, quartering for the wind, style on point and style of backing.

It would be interesting to hear what some of our old pointer breeders have to say in regard to Mr. Arkwright's views.

---

Attention is drawn to an extract from Mr. Pitkin's letter to our business manager. Mr. Pitkin has advertised for years past in FOREST AND STREAM, and as a business man he appreciated the value of his investment. These are the sort of "come ons" you cannot fool with sawdust. They expect greenbacks and they get them when they advertise in FOREST AND STREAM. *Verb. sap.*

---

Two black and tan dogs were taken to the Queen's Hospital, Birmingham, the other day by their youthful owners, says the English *Stock-Keeper*, the one suffering from a broken leg and the other from a dislocated shoulder. The dogs were kindly treated by the medical staff, were bandged and walked away. Two days afterward the one with the broken leg walked into the institution alone. In the surgery it lay down while the doctor unfastened the splints and redressed the injured limb. After the operation had been performed the dog gratefully licked the doctor's hand and departed. While this reads very like the stories we read in our good boy days, is it not another illustration of inductive reasoning?

---

Mr. Justus von Lengerke of Orange, N. J., has lost his English setter Rudy Boy, the dog having strayed from his residence on Highland avenue. Rudy Boy is by Count Howard and is three years old. In color he is practically all white with only a little orange marking on head and ears, has light eyes and nose and is stockily built. If any of our readers come across such a dog they should communicate with Mr. von Lengerke.

---

Border Ruffian that Mr. Thos. Webb of Peoria, Ill., purchased from Mr. Cyril Jackson of England, arrived in wretched condition. It seems he was packed away in a dark, filthy hole aboard ship and was almost starved to death. When received at New York the dog was like a skeleton, unable to walk and too weak to retain solid food. As Mr. Webb paid $48 to have the dog properly cared for and landed in New York, it would seem as if the firm that brought him over should have secured decent quarters and treatment for the poor animal.

---

If a dog has done you an injury don't shoot it but sue for damages. A Miss Terrell of Salem, Mass., was bitten by a mastiff on the leg and arm. Last week she brought suit for damages and was awarded $2,250 by a sympathetic jury.

---

Mr. D. Ross, in his report of the Scottish terriers at the Scottish Kennel Club show recently held in Edinburgh, spoke of the diversity of type and was of the opinion that a great number of breeders had an idea that all that is required nowadays was a long head. He deplores the fact that in this strain after one point they have produced a head not well balanced. There was more than one dog brought before him that had a raking, long head looked at sideways, but when looked at full face it seemed rather short, because all the length was from the stop to the nose, with a very short skull, while the eyes are set too deep in the head, and are generally of a light color, which gives a sour expression, and not at all that which is wanted in a Scottish terrier. This hint may be useful to our Scottish terrier breeders, for we have heard it remarked more than once that many of these winning terriers' heads seemed too big for their bodies. "Stepping Stone," in commenting on this point in the *Scottish Fancier*, says that almost invariably in strong-jawed dogs the muzzle is blunt instead of gradually tapering toward the nose. Most of these strong-faced dogs are too straight in face and flat in skull, which in his opinion takes away all character, and is certainly wrong in a Scottish terrier. Some breeders, he remarks, make a mistake in trying to get a dog's head on a bitch. The head of the bitch should be identical with her mate, excepting being more refined and possibly a little longer in proportion from eye to nose.

---

Mr. H. Nelson, known for some time as proprietor of the Maybrook Kennels, of Englewood, N. J., has for the present retired from the fancy and assigned all his interests in the kennel to his late manager, Mr. A. C. Bradbury. Mr. Bradbury starts for England the second week in January and returns in time for the New York show. After that he will probably close up the kennel unless he can find a partner, when he would be willing to run it on shares. The kennel contains some capital greyhounds and terriers, and Mr. Bradbury's ability as a trainer was shown in the Western coursing meetings this year and last. He would also be willing to take a position as kennel manager. In any case he will not part with all his dogs. He has taken out a nomination for the American Waterloo Cup, and has a very promising young dog, as well as two pups whelped last January, by Dover ex Gilda, bred by Mr. Mulcaster; and the two Herschel pups that he is bringing from England will give him a strong hand to choose from. Lady Pembroke he left at Huron, S. D., to be bred to Miller's Rab. While on his Western coursing trip the Maybrook Kennel greyhounds had their first taste of coyote. After a mile run Dakota, the well-known pup, got a grip on the varmint's throat. Miss Dollar III. and Southern Belle took the other end, and Jim Boy, their latest importation, fastened on to the coyote's chest. Then Bradbury knifed the beast.

---

Those of his fancier friends who know Mr. W. C. Reick will join us in congratulations on the occasion of his marriage to Miss Ridgway, at Burlington, N. J., Dec. 4. St. Bernard breeders were sorry to see Mr. Reick retire from active interest in the "holy" breed, but whether he ever decides to exhibit again or not he can always remember with a certain pride that he at one time owned the strongest team of roughs in the world. While wishing Mr. and Mrs. Reick every happiness in the future, a hope arises that Mrs. Reick is such a lover of dogs that in time her husband may be persuaded to return to the fold and stir up the St. Bernard fancy once more.

---

There is to be a dog show at Guelph, Ont., in connection with the Fat Stock show next December.

---

Bloomington, Ill., is to have a dog show next spring, but dates will not be claimed until their application for membership in the A. K. C. is passed upon.

---

There is a good deal of comment in regard to the clashing of dates of the Denver and Detroit shows. The American Kennel Club decided some time since not to interfere in the adjustment of dates, finding the subject entirely beyond their control. Kennel clubs are dependent for their dates, in great part, on the owners of suitable buildings in which to hold their shows. It is matter for regret that the two shows named should clash, but outside of handlers' interest there is little reason, considering the distance between the two cities, why there should be much loss on either side, although of course the Denver people would probably feel the effects to a greater extent than the other city. A trip from the East to Chicago is in itself a trying experience for the dogs, and after a week on the bench at the Mascoutah show, the long ride to Denver and back to Detroit, supposing the latter club delayed its show for a week, would not improve their condition. The Eastern dogs that take in the Chicago show would probably go on to Detroit, and surely there are enough good dogs in Chicago and other Western cities, that would be sent to Denver, to make a creditable exhibition.

---

The Canadian Kennel Club intends to "gang its ain gait" in future and has decided by a mail vote that it will have none of the American Kennel Club. After the way the agreement, arranged by the two committees at the last New York show, was received at the annual meeting of the C. K. C., those who were acquainted with the feeling of most of the Canadians did not expect any other outcome. The registration part of the agreement, we understand, was the principle stumbling block. The rejection of the agreement is said to have been on account of the "outrageous" demands of the A. K. C. If true, this is a rather strong term. As far as we can make out the C. K. C. cannot support a stud book; they should have one, but they could scarcely expect the A. K. C. to publish a Canadian section in their stud book for nothing. The other points in the proposed agree-

ment seemed fair enough. The abandonment of the negotiations means that the awards made at Toronto and Ottawa in 1893, and the Toronto awards this year will not be recognized by the A. K. C. In future Canadian exhibitors will have to "list" with the A. K. C. to exhibit in this country under A. K. C. rules, and Americans must "list" or register with the C. K. C. in order to exhibit at Canadian shows under their rules. Toronto show this year felt the effects of the uncertainty as to whether the agreement would be ratified, and will surely suffer to a greater extent next year unless other inducements are offered to exhibitors from this side. The principle hitch will be if a rule is made by the A. K. C., as was hinted at in a motion made at the meeting of Dec. 6, debarring exhibitors from exhibiting at shows, not held under A. K. C. rules, where disqualified members are allowed to exhibit. We fancy, however, that this is such an arbitrary measure that it will find few supporters.

---

The bull bitch Bromley Lass; sister to King Orry, now in this country, was worried to death by a kennel companion recently.

---

Mr. Vero Shaw and Mr. Geo. R. Krehl have been invited to judge at the W. K. C. show, but business engagements preclude either from accepting. A hearty welcome would await them could they come.

---

Mr. Starr, of Toronto, has sold his St. Bernard dog Kenmore to Mr. Langworth, of Truro, N. S., after repeated offers had been made for the dog. He still owns Queenie Starr and the well known Monk.

---

The dogs of the Seminole Kennels, of Chestnut Hill, Pa., were to be sold at auction on Tuesday, Dec. 18. We understand the kennel made an assignment some time since. The Seminole Kennels have been prominent in the Irish setter, collie and pug breeds for some years, and if this means the breaking up of the kennel, fanciers will regret to hear of the fact. The sale took place at the American Horse Exchange, New York.

---

Visitors to Netley Abbey, the home of Lord Byron, are struck by the beautiful monument erected on his lawn by the poet, to the memory of his faithful dog—the truest friend, he says on the inscription, he ever had.

---

The Pacific Kennel Club does not intend to let 1895 pass away without having a bench show in San Francisco. At an enthusiastic meeting held in that city Dec. 5, it was decided to hold a show May 1 to 4, and they expect it to excel all previous shows held on the Slope. The treasury shows a balance of over $1,000, so that the club will not have to ask for a guarantee fund. Messrs. C. A. Haight, H. Bier, T. Higgs, Howard Vernon and T. J. Watson were elected a bench show committee, and the selection of these gentlemen is said to be a guarantee of success, as far as arrangements go.

---

Cocker spaniels seem to be a favorite breed in Omaha, Neb., and fanciers have in late years been good customers of the Eastern and Canadian kennels. Ko Ko, Black Gyp, Brantford Bonita and others are among the most important purchases, and have done well out there. Some of the spaniel men think that the Omaha Kennel Club should give some evidence of its being and hold another show. Among the field sportsmen there seems to be a feeling that a field trail club should be formed and trials held at no distant date.

---

The Frenchman, or more particularly the Parisian, is evidently a great dog lover, for that lively city is said to have 80,000 registered dogs—one dog to every twenty-eight inhabitants. Of course, the poorer the quarters the greater the number of dogs. The estimated cost of feeding this army of canines is $2,000,000 per annum, and their care and feeding affords a living for twenty-five manufacturers of dog collars and muzzles, four bakers of dog bread, and there are five factories for making biscuits of meat fiber, etc., three special dog pharmacies, a dozen infirmaries and two hospitals.

---

An "A. K. C. Member" draws attention to the paragraph in last week's Dog Chat, referring to what the A. K. C. should do with its balance which we said dog breeders hoped to see given as special prizes. He says: "I think you must have overlooked the financial statement of the club, which appears in the same issue. If you look at that you will find that the balance of $2,815 on Jan 1, has been reduced to one of $1,108. The receipts since Jan. 1 have been $5,765, and the disbursements $7,473. The fact is the A. K. C. has suffered severely from the business depression which existed for so long, and has had to contract its running expenses very much. The type-writer has been dispensed with, and to keep up the work of the office, both Mr. Lewis and Mr. Day have to work extra hours." We have verified this statement and find that in this and other ways a reduction of expenses has been made in keeping with the current receipts.

---

Mr. J. M. White, of Brooksville, Pa., has formed a partnership with Mr. C. W. Espy of the same place, in the breeding of pugs, their kennel to be known as the Oak Ridge Pug Kennels. Mr. White turns in the pugs he recently purchased from Al. Eberhart, Young Douglas, Peggy Pride and Tootsey Davenport and Mr. Epsy's Queen Tracey completes the team.

---

Dropping into Dr. Sherwood's hospital the other day we saw a rather peculiar manifestation of chorea. Instead of a twitching of the limbs or facial movements, the general form of this annoying complaint, this dog, a St. Bernard, every now and then would contract the stomach until the body was arched, the action being very like that of a dog with colic. The dog was in good health otherwise and seemed lively and free from pain.

---

The next meeting of the National Beagle Club will be held at the A. K. C. rooms Jan. 4, 1895, at 4 P. M. The successful trials held last month at Hempstead, L. I., have infused renewed interest in the club, and though the efforts of the secretary to draw a good entry scarcely met with the encouragement they deserved, it is thought that another year, now that the club is assured of such good grounds, the entries will greatly increase.

---

Mr. Geo. Laick's Laick's Roy developed a bad case of distemper after the National Beagle Club trials. At Oxford he caught cold and had dysentery, and this accounts for his poor showing. He did better at Hempstead, but, as his recent illness shows, he was in anything but proper form for a field trial. He will be shown on the bench and will probably win ribbons.

---

Two notable absentees from the Birmingham show this year were Mr. Shirley, president of the English Kennel Club, who has not missed a show for thirty years, and Mr. John Shorthose, one of the originators of the show, who missed the show for the first time this year.

---

Among the oddities and funny incidents of the show were a dachshund and a rough St. Bernard with blankets on.

---

Metchley Wonder sustained what might have been a serious accident the other day. A bitch had been sent to be mated, and while in the crate Metchley Wonder came up. The bitch made a jump for him and in throwing his head back a projecting nail on the crate struck his eye. The injury happily did not turn as seriously as was at first suspected.

---

The following alterations have been made in regard to membership in the Canadian Kennel Club and fees for registering dogs in the Stud Book. 1. Membership fee is $2 payable in advance each year. The year ends Aug. 31. 2. This entitles to one free registration, any in excess of this may be registered at 50c each. A coupon is issued for the free registration, which if lost cannot be replaced. A coupon must be attached to each application sent in for free registration. A copy of the annual Stud Book, containing all registrations for the year extended in full and published at $1.50, will be supplied each member free. 3. The fee to non-members for registration is $1 for each dog. For listing the fee is 25c. 4. To members the fee for listing is 25c. 5. No dog can be registered unless pedigree for three generations on both sides is given in full, or it has won not less than two first prizes at shows recognized by the C K. C., or is the product of parents already registered in the C. K. C. S. B. 6. Any dog not eligible under above rule may be "listed." 7. For each certificate of registration after the first, and for each copy of pedigree, a fee of 25 cents is charged.

---

There will be a dog show held in connection with the Cincinnati Poultry Club Jan. 11 to 15, 1895, in the Music Hall, Cincinnati, O. Entries close Jan. 7, and fees are $2 for first entry, $1 for others. Prizes, 50 per cent. of fees to first and 30 per cent. to second. Premium lists will be issued this week, and it is expected that there will be an entry of 200 to 300 dogs. Geo. H. Hill judges setters and pointers; J. W. Mack pugs, Italian greyhounds and all terriers except fox; J. T. Rockwell Irish water spaniels; R. I. Carter poodles and bulldogs; Dr. H. Heywood beagles; John Hawkes collies; Roger Williams greyhounds, barzois, bloodhounds and foxhounds; Al G. Eberhart mastiffs, St. Bernards, Newfoundlands, great Danes and non-sporting dogs not already classified. Austin's Dog Bread will be fed and Little's Soluble Phenyle will disinfect the show. Many specials have been donated and handlers' prizes will be given. Al Eberhart is superintendent and to him applications should be made for premium lists.

---

Mr. Al G. Eberhart's pug dog Happy Toby, while out exercising on Thanksgiving Day, was instantly killed by a kick from a horse attached to a milk wagon.

---

The great Birmingham show held Dec. 1 to 5, seems to attract dogmen on the other side, chiefly on account of past glories, for it has long since been passed in the race for first honors by such shows as the kennel club at Crystal Palace and Cruft's big ventures. The benching and management seemed antiquated in some respects and though there was no falling off in numbers a decided lack of quality was apparent in many of the breeds—notably fox-terriers and mastiffs. The Sunday interregnun seems to come in for much just criticism. Lord Fitzroy judged the fox-terriers and in the language of the ring "made a regular 'ash it"—that is according to present fancier ideas, going for a working type of terrier. One critic describes the judging as a farce and that it must be where non-fanciers are selected to judge. The small entries proved that fanciers appreciated the situation. In pointers Old Saddleback still held his own, looking very fit and eventually winning the championship. Mr. Chapman's kennel took the corresponding championship under "Scotch" Bailey's pilotage, and he seems to have taken a number of prizes in other breeds. Setters were a representative lot as they always are at this show. St. Bernards mustered in greater force than usual, Lord Douglas winning the championship in rough dogs and Abbess in bitches, Frandley Stephanie being absent.

---

In smooths Marquis of Bede Burn took the championship prize over Kenilworth II., but the decision is not endorsed. In mastiffs the judging seems to have upset the talent somewhat, especially when the well known Coombe Baroness could do no better than commended. Collies had a bumper entry, of good quality and bobtails were the best ever shown at one show. Bulldogs were fairly represented but the terriers do not seem to have come up to former years, with the exception of Welsh terriers, which came out in force. In all there were 1,517 entries. A coincidence of the show was the fact that on the first day the same number of persons (6,058) passed the turnstiles as in the show of 1893.

---

Letters on Speed or Nose in Beagles; The Foxhound, &c., are unavoidably left over this week.

---

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.*

J. M. H., Ridgway, Pa.—There is no distinct breed called Gordon pointers.

C. A. S., Toronto, Canada.—The Gordon setter Guy is not registered in the A. K. C. S. B.

S. A., New York.—We do not know the record on setter pups in one litter. A litter of fifteen is a large one, but it does not constitute a record litter.

F. R. K., Philadelphia, Pa.—Irish setter Rockwood Dandy is by Desmond II. (8409) out of Fly, by Grafton out of Maine, by Elcho II. out of Dell. Shamrock Belle is by Henmore Shamrock (16743) out of Daisy (3927).

W. S., Germantown, Pa.—The field spaniel or cocker spaniel would be best for your purpose and you would be more likely to get trained dogs of those breeds. Either could be trained to tree. A "Kennel special" in our business columns would bring you the dog you require.

A. W. J., New York.—Will you please let me know through your correspondence column, the pedigree of the collie bitch Flurry, the dam of The Squire and Flurry II.? Ans. Champion Flurry, E. K. C. S. B. 10736, by Trevor out of Hasty, by Carlyle out of Glen; Trevor by Trefoil out of Maude.

G. S., Paterson, N. J.—The early service will not retard your bitche's growth; if anything, the contrary. Letting her pass two seasons will not make any difference; if bred to a pure mastiff the next time she comes in there may be a trace of the mesalliance, though the weight of evidence is against such a supposition. You need have no fear on this score.

MOT, Birmingham, Ala.—1. Did the pointer bitch Climax (E., 20,217) ever win a place in a field trial, and was she a bench winner? 2. Were the pointers Cotta, sire of Miranda II., and Gen. Prim, sire of Pride (E., 1,265), field trial winners? 3. Give pedigree of the pointer bitch Fleet (7,988). Ans. 1. Climax (E., 20,217) won second at the Kennel Club show of 1887. We can find no record of field trial winnings. 2. No. 3. By Dash out of Sport; Dash by Hindoo (2,896) out of Flight (3,057).

---

### Business.

HARTFORD, Conn., Dec. 4.—*Forest and Stream Pub. Co.:* GENTLEMEN—With the end of this quarter you may discontinue my ad., keeping my electrotype in your possession as I hope to put it in use again 'ere long. I think I have advertised with you continuously about as long as any of your kennel patrons and I am sorry to interrupt our relations now, but I have no pups on hand nor none in immediate prospect, so must "shut up shop" for a while. I hope to be able to continue with you at no distant date, for I should not attempt to do business without the aid of FOREST AND STREAM. H. S. PITKIN.

---

### "Forest and Stream" Fan Pedigree Blank.

FOR some time past breeders of dogs have demanded a pedigree form that would afford spaces for a more extended pedigree than those hitherto published. The difficulty has been in arranging a form that, while admitting the required extension, would be compact and not too large for mailing. This difficulty has been solved in the "FOREST AND STREAM Fan Pedigree Blank" which is so arranged that a dog's pedigree can be recorded for eight generations, and the spaces radiating from a center, the reader is enabled to trace at a glance the different strains which lead from sire and dam. Spaces are also provided for recording the name of dog, its breed, color, sex, breeder and address, dates of birth and purchase, from whom purchased, E. K. C. and A. K. C. Stud Book numbers and certification. These blanks are for sale at $2 per hundred, 30 cents per dozen, by the Forest and Stream Pub. Co., 318 Broadway, New York.

# Hunting and Coursing.

### Brunswick Fur Club.

ROXBURY, Mass., Dec. 13.—The sixth annual winter meet of the Brunswick Fur Club will be held at Barre, Mass., during the week of Jan. 7, 1895. Club headquarters will be at the Hotel Barre. The hotel is heated by steam and has all modern conveniences. The rates will be $1.50 per day. Good accommodations for the hounds will be provided in the hotel stables.

The annual meeting of the club, for the election of officers for 1895 and for transaction of other business will be held at 8 P. M. in the hotel parlors.

This is to be a hunting meet, and it is hoped to make it one of the most successful in the history of the club. All fox hunters will receive a hearty welcome and are cordially invited to be present and bring their hounds.

BRADFORD S. TURPIN, Sec'y.

## HUNTING AND COURSING NOTES.

We have had several queries lately in regard to a good trail for drag hunting. Oil of anise is the usual recipe, but if a good breast-high scent is required the following mixture will give it: ½oz. oil of anise, 1oz. castor oil and ¼oz. valerian. A well matured red herring is by no means to be despised at a pinch.

• • • •

Coursing men will be pleased to hear that Mr. Sam Vidler, secretary of the Altcar Coursing Club, who met with a severe accident recently, is on a fair way to complete recovery.

• • • •

The noted greyhound Simonian, at one time owned by Col. North, who sold him to the Grand Duke Nicholas for $1,500, and that won the Russian Waterloo cup and other stakes, is again an inmate of the Elsham Kennels, having been repurchased for $3,625. He is royally bred, by Greentick out of Bit of Fashion, and has a number of stakes to his credit, the Waterloo Purse and Plate among them.

---

# Yachting.

### Some Plain Facts.

IN view of the many points involved and the conflicting statements of the different parties, it is hardly surprising that the average reader even though well posted in yachting, should be more or less at sea in forming a satisfactory opinion. It would be almost impossible to touch on the many important points at issue, to say nothing of the secondary ones; but by way of clearing up somewhat the present misunderstanding, we offer the following propositions, in as concise a form as possible, believing that they cannot successfully be controverted by those who uphold the new deed of gift:

1. *The America's Cup has never been the property of the New York Yacht Club; but was entrusted to it, to be held under certain definite terms, until won from it.*

2. *The New York Yacht Club had no legal right whatever to alter the terms laid down by the owners of the Cup.*

3. *The new deed of gift was not made by the members of the New York Yacht Club, but by a small clique of officers and members.*

4. *The new deed of gift has never been submitted to the members of the New York Yacht Club; and has never been ratified by them.*

5. *The delegating of the supreme power of the club to a special committee, even granting that the club had such power to alter the deed of gift, was irregular and illegal.*

6. *All action on the America's Cup at the special meeting of October, 1887, was irregular and illegal, notice of such proposed action not having been given three days in advance to all members.*

7. *As long as the new deed of gift is upheld, no challenge can be recognized and accepted by the holder unless it contains the four dimensions specified in clause 6.*

8. *The challenge under which the Valkyrie-Vigilant races were sailed was not legal, in that it did not contain the beam at waterline, extreme beam and draft, as demanded in clause 6.*

If the defenders of the new deed are honest in their professions, they will perhaps lay aside for a time some of the many confusing side issues and disprove the vital points here recounted.

---

[*From the Forest and Stream, Jan. 26, 1893*].

WE have not yet seen a clear and direct statement of the exact terms on which Lord Dunraven's challenge has been accepted, and we doubt very much whether any one of the five members of the Cup Committee could draw up such a statement; or whether, if each of them tried it independently, the five statements would agree. Even if they did, we feel very certain that even Lord Dunraven, much less the Royal Yacht Squadron, would not for a moment assent to the views of the committee.

The simple fact is that the "blue ribbon" of the sea is still tangled up with the red tape woven about it by Com. Gerry and ex-Sec'y Bird; if Valkyrie should be defeated, the next challenger must fight the new deed just as Lord Dunraven has fought, we hope with better judgment and proportionate success. If Valkyrie should win, there will in all probability be a renewal of the long and tedious negotiations of the past six months before the Royal Yacht Squadron will sign such a paper as the lawyers of the New York Y. C. will draw up, and she is allowed to sail away with the coveted trophy.

---

OUR comments, this week and last, on Cup matters are written with a full realization of the facts that the New York Y. C. is now desirous of a race, and also that the immediate conditions agreed to by the club in the Valkyrie—Vigilant match and in the present case are perfectly fair and liberal. All this, however, has nothing whatever to do with the matter of rescinding or indorsing the illegal and unfair instrument fastened on the club by its Cup committee of 1887.

ONE of the most complete and comprehensive collections of gross misstatements and egregious blunders which we have encountered for some time is contained in a column article in the Philadelphia *Times* of Dec. 7, the work of its sporting correspondent. It would not be worth our while to refute the false statements and correct the blunders contained in this heterogeneous jumble of "Alabama and Shenandoah," "Spirit of '76," "Queen's Cup," "American clipper ships," and "crowding the Vigilant on the rocks;" the pity of it is that such trash is read and believed by persons who are fair and honest themselves, but know nothing of the truth in yachting.

---

THE New York *Sun*, of Dec. 12, in discussing at considerable length the present complication between the New York Y. C. and the R.Y.S., falls into some errors which are quite inexcusable in a journal of its standing. It says, "In the deed under which the New York Y. C. holds the America's Cup against the world, there are two leading clauses. One provides for a race under certain very simple conditions. Another provides that challenger and challenged may meet and arrange any other terms conceivable which commend themselves to their common approval. This second clause, known as the mutual agreement clause, giving all possible freedom to the spirit of match-making, *was added to the old deed after the experience of several races.*"

A reference to the original deed will show that, in direct opposition to the statement of the *Sun*, the vital clause of the whole document was that securing to the challenger the right to a mutual agreement. The ultimate conditions of a race over the club course with six months notice, occupy a secondary and unimportant place, and were only intended to become operative after all efforts at a mutual agreement had failed. From the very first challenge in 1870, the New York Y. C. deliberately refused to recognize this right to a mutual agreement, preferring, whenever forced to abandon any of the unfair restrictions imposed by it, to do so as a "generous concession."

It is not only untrue that, as the *Sun* states, the new deed was made for the purpose of adding such a mutual agreement clause; but it is true beyond contradiction that while this clause occupies the first place in the true deed, in the Gerry "instrument" it appears in an entirely altered form, and in a subordinate position to the clause demanding the four dimensions. In the true deed, this same clause governs all possible conditions of a match; in the Gerry deed, it cannot be rightly construed to admit of a waiving of the dimensions; and it applies only to certain conditions, "as to to the dates, courses, number of trials, rules and sailing conditions." If the *Sun* is really honest in its efforts to discuss the matter fairly and without prejudice, we would advise a careful reading of the first and last deeds.

---

THE *Sun* further says: "The Royal Yacht Squadron, for reasons, we confess, beyond our ability to define to our satisfaction, has undertaken to get the deed of gift repudiated." If the *Sun* will refer to the files of any of the New York papers of 1887 or 1889, it may easily inform itself as to the objections of the R. Y. S. to the new deed, on the score of the illegality of any change of the conditions laid down by the original owners of the Cup, on the score of underhand and irregular methods in making the new deed; and on the score of the unfair demands made of and restrictions imposed on the challenger. All of this has been stated again and again by the R. Y. S. and other clubs, and by American, as well as British papers; certainly there can be no good grounds for the *Sun's* plea of ignorance.

---

THE most remarkable thing in connection with the *Sun's* editorial is the following letter, which was published on Dec. 14:

*To the Editor of the Sun:*

I cannot refrain from saying that your editorial of yesterday on yachting and the deed of gift of 1887 is excellent and one of the best, if not the very best, I have ever read on these questions.

JAMES D. SMITH.

There is not a member of the New York Y. C. who is better qualified than ex-Com. Smith to know that the *Sun's* statement as to the mutual agreement clause in the two deeds is absolutely untrue, and that in the true deed the right to a mutual agreement preceded all other stipulations.

---

IT would be a difficult matter to select, from a list by no means brief, the meanest and most unsportsmanlike act associated with the defense of the America's Cup, but among the first half dozen, the "generous concessions" present some very strong claims for precedence.

The history of the Cup proves that the New York Y. C. began the defense in 1870 by deliberately ignoring the mutual agreement clause, and in the face of its then Commodore, Henry G. Stebbins, compelling the challenger to accept the very least that it could possibly give him, a single race, over the inside course of the club against the whole fleet.

In every subsequent contest, from that day to 1887, the rights of the challenger to a true mutual agreement which should give him a series of races over fair open courses and against but one defending yacht, have been denied him. It is only after twenty years, and when confronted with the responsibility for the cessation of the Cup races from 1887 to 1892, and for an indefinite continuance of the same state of affairs, that the New York Y. C. discovered, after it was too late, how highly it valued the mutual agreement clause; and that it consented to conditions that were other than unfair and one-sided.

As one challenger followed another during this long period, each was compelled to fight hard for the rights denied to his predecessors. In the second contest the New York Y. C. was compelled reluctantly to meet the challenger with one boat instead of a fleet, but it still attained much the same unfair end by picking the best boat of the fleet according to the weather at the start of each trial. It was also compelled to give a series instead of a single race.

In the third contesti t was compelled to limit the defender to a single yacht, though vehemently maintaining its right to select a different oat on the morning of each race, according to the weather. This decision was clinched for all time by the very fair stand of the officers and committee in the fourth race, though many of the club still desired to retain this unfair advantage over a challenger.

In each of the next three races the strongest protests were made against the retention of the inside course, but Genesta, Galatea and Thistle were each compelled to sail over it; nor was it abandoned until the Thistle–Volunteer races proved the American yacht was even faster in a good breeze outside, especially to windward, than in a drift inside the Hook.

There is not one of these disputed points which would to-day be denied as the right of a challenger in any match; to a series of races, against a single boat, and over neutral or open courses; and far from any generosity of the New York Y. C. in tardily granting them, it must always remain a reproach to the club that it has withheld them so long and restored them so unwillingly.

What lends an additional shade of meanness to the matter is that each successive "concession" has been heralded throughout the country as a fresh proof of the grasping and unsportsmanlike character of the challenger and the liberality and fairness of the holder. While this has been done immediately through the medium of the press, the inspiration has come directly from the New York Y. C., from members who should know, even though they do not, what are the recognized usages of yacht racing.

That class of yachtsmen who believe, or profess to believe, in the fairness of opposing a single foreign yacht by the whole national fleet over the inside course has always had a willing exponent in the *New York Herald*; and this paper has been one of the foremost in dilating on the concessions made each year. There was a time when the *Herald*, however unfair and partial, was at least competent to deal understandingly with yachting matters; but the positive ignorance of all nautical affairs which has characterized it of late years has this time landed it in a complete muddle. In the last attempt to "note just how much has been secured in this way by British yachtsmen" it rolls out a string of words in a manner that reminds one of the trained parrots which, a few months since, tempted New Yorkers with the alluring invitation "After breakfast, go to Proctor's." The writer of the following, in noting down the "concessions" as recounted to him by some "prominent yachtsman," has even failed to appreciate the fact that a time limit of 6 hours for 30 miles, an average of 5 miles per hour, is much less effective in preventing a drifting match than one of 7 hours in 40 miles, or 5.7 miless per hour.

"The deed of 1887 provides that the challenging club shall give the length on load water line, beam at load water line and extreme beam and draught of water of their yacht, which dimensions shall not be exceeded. This has been waived, and the load water line is now only required, besides which an excess of two per cent of this length was permitted in the last match.

"The deed requires that three races shall be sailed—the first, twenty nautical miles to windward and return; the second, an equilateral triangular race of thirty-nine nautical miles, and the third, if necessary, twenty nautical miles to windward and return. The races of the Vigilant-Valkyrie match were, in brief, best three out of five, out side of headlands, over courses each of thirty nautical miles.

"The deed says that in the races for the cup there shall be no time allowance. The Vigilant and Valkyrie's conditions included the system of measurements, time allowance and racing rules of the New York Y. C.

"The deed holds that each of the races must be completed within seven hours. The Vigilant-Valkyrie conditions caused six hours to be named instead.

"Which is a pretty fair list of concessions under the 'mutual agreement' clause, but there are more—those which the Cup Committee have agreed to allow in the present controversy. These are limiting the live weight and measurement with all weights on board; the withdrawal of an original challenge and the simultaneous acceptance of a new challenge, that the best of the British boats may be sent across the water, and a one gun start has been given them, although in the prospective races two minutes will be given in which to cross the line.

"That's the list of concessions. More are wanted, and the foolish question of holding the cup, if won by the challenger, has been raised."

---

As regards the first of the above "concessions," the one dimension was only accepted, not because the demand for all was unfair; but because, after five years without a challenge, one must be had; and this was one of the few points strenuously insisted on by Lord Dunraven. The new deed does not require that but three races shall be sailed, it does not say (save in the event of a non-agreement), that there shall be no time allowance: and the seven hours limit, so far as it goes, only applies in like case. The one-gun start has been denied, not conceded; the limiting of the crew is no concession, but a tardy reparation for a trick which has been severely condemned even by American yachtsmen as savoring of unsportsmanlike practice.

There are three points in all, in the terms accorded in 1892 and those now offered, which may be fairly termed concessions, the agreement to five instead of three races, the one-gun start, allowed in 1892 but now denied; and the partial agreement to recognize a boat not specifically mentioned in the challenge. The other points described as concessions, the limiting of crew, time allowance, time limit and giving of waterline length alone, are rights which any challenger may fairly demand of the other party in making a match.

---

The latest move of the Larchmont Y. C. is one which will commend itself to the many yachtsmen who journey to Larchmont on the occasion of every race; not infrequently to return with a feeling that they have wasted a day in the vain attempt to watch the various classes turn their different and distant marks at Matinnicock, Scotch Caps, Captains' Island and Stamford. The club is now at work remodelling its courses so as to make several triangles of such size that at least two turns will be required in each class; while all classes will be within sight as nearly as possible at the same time. It is almost certain that this change will meet with opposition at first, but it is so directly in the interest of closer and more exciting racing that its merits must soon be appreciated by all. The club is not ready to adopt the one-gun start, dividing the fleet into suitable classes; but it s only a question of time before this innovation must follow. We congratulate the club on its efforts to keep at the head in improving the standard of yacht racing; and we would be glad to see shorter courses and more rounds adopted by other clubs.

---

IT is an unfortunate thing for the framers of the new deed that, in making it, they were not able, at the same time, to call in and destroy every copy of the original deed. This latter document is, however, still within easy reach, it has been repeatedly published in the FOREST AND STREAM, it appeared for years in *The American Yacht List* and it may be found in Captain Coffin's "History of the America's Cup." Anyone desiring to convince himself of the full extent of the misstatement made by the *Sun* and vouched for by ex-Commodore Smith, may readily do so by referring to either of these authorities. As long as the old deed is thus accessible it stands as a conviction of the men who have slandered it and its makers in order to justify their own illegal acts.

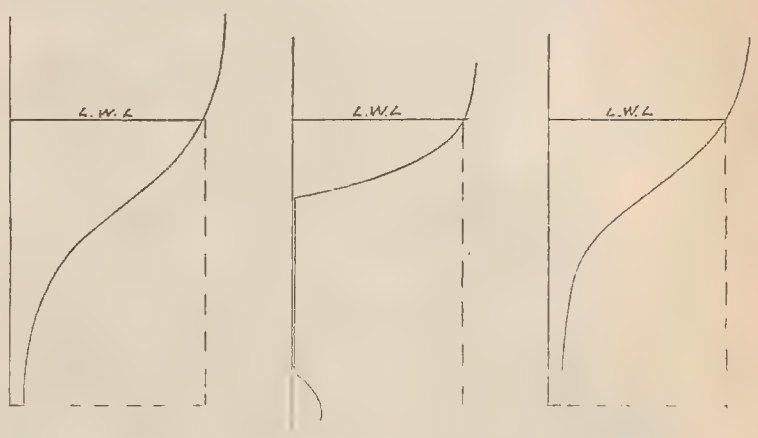
---

## The New Larchmont Class.

IN view of the fact that designers are very apparently seeking to beat each other's productions and previous ones of their own, by a few inches of added keel depth, or by a more attenuated midship section with a constant decrease of the sterling qualities of a yacht, there would appear to be urgent need of a means, the use of which, would relieve the monotony of such method, and conduce to the equity of yacht racing by providing an equality of opportunity, preserved within measured and desirable limits.

In framing new rules to govern the construction of a class of small yachts, the Larchmont Yacht Club is influenced primarily by a desire to insure in these little vessels that they shall not merely be fast, but also that they shall possess valuable qualities relative to cruising and comfort. To do this, it is clearly recognized that requirements and restrictions must be made that are not included in the present racing rules. Not that these are not good as far as they go, but that they do not go far enough to include and furnish an equation in all cases, for some features in the yacht of to-day, which are of perceptible and recognized advantage for speed simply; but which, if unmeasured and unrestricted, are inimical to the presence of other features, valuable and necessary in every yacht which is more than a racing machine.

Of course if the presence of features which give advantage in speed can be had in a yacht without change in the measurement, they will be taken by the zealous racing man, and there will next occur a progressive increase of the untaxed feature. But equally, of course, to the extent that this development is objectionable, or that, accompanying it, other and good features are restricted, will the number of such yachts built for racing be diminished.



The most recent productions in racing yachts of those which have been conspicuous in the classes of small vessels, have been yachts with small under-water bodies, with displacement and ballast correspondingly small, but with the ballast made effective by acting on long levers. They have been vessels of small capacity relative to their dimensions. A little vessel of 6½ft. draft would require 5ft. of this for the keel or fin, and only about 1½ft. for the body of the boat itself, the keel or fin being used to suspend a weight of lead, thus giving the power to carry sail upon a body of small displacement and resistance, and not possessing the room and accommodation which we have been accustomed to associate with such dimensions and draft. Of such yachts as have been alluded to are the speedy little racing 21ft. boats, brought out last year by the Larchmont Y. C., and which raced so much on the Sound and about Newport during the season.

However desirable may be this kind of vessel in a small class, used only for day work, for amusement and in races occupying only a few hours each, and having no pretension to cruising work and fitness, other features and qualifications become necessary and should appear in a larger racing yacht; and suitable room and accommodations should be had for the owner and his crew to eat and sleep on board, and roominess, moderate draft and cruising fitness should be made practicable and encouraged. They should be given an equitable premium, and be secured from the unequal and unfair competition of vessels less fit and desirable.

The type of vessel which has been referred to as the modern product for racing, and in which speed is attained by the ballast acting through a long lever upon a form of small bulk and resistance, has its distinctive features most clearly shown, and it is at the same time made most easily comparable with other forms, by the exhibition of a midship section—the immersed part—inscribed in outline within a parallelogram.

If the midship section of the bulb-fin racing yacht be treated in this way, it will become apparent that it occupies only a small percentage of such parallelogram. It will be in strong contrast to the form of the more roomy vessel similarly treated, and having the same draft of water. It will be seen that we have in one form a keel with a little boat on it, and in the other we have a boat with a keel on it, and as the space included in the midship section indicates the space in the yacht that can be built to such section, it becomes evident that one form is (so far at least as room and draft are concerned) more desirable than the other, and that, as more work is involved in driving the larger section and bulkier form through the water than the smaller one, equal speed can only be expected from greater power, and that to sail over any given distance in equal time the larger vessel should be permitted to carry more sail.

The Larchmont Yacht Club have arranged for the formation of a racing class of yachts of 34ft. racing length, and for the sail to be carried, and the racing length determined by the application of the principle which has been referred to. While no positive prohibition has been placed on the bulb-fin type, a vessel which would be practically a weighted fin with a canoe on it, can scarcely be built under the requirements of these rules as to room in cabin, forecastle, etc.; but any yacht approximating to this will have her actual length or sail area (either or both) added to, and in proportion as her midship section may occupy less space than 35 per cent. in the parallelogram, in which it can be included. This proportion has been adopted as the normal one, and a figure in illustration is given here.

Keel Yacht of 1890. 41 p. ct. of parallelogram. | Modern Bulb Fin. 20 p. ct. of parallelogram, | 35 pr. ct. of parallelogram.

In the new rules there are stated requirements for room and for the equipments necessary in yachts to be lived aboard, but only the essential things are required. There is no use made of the co-efficient of the midship section to limit either beam or draft as such, or to fix the relation of one to the other. A comparatively deep yacht like the noted Minerva has the same co-efficient as the wider and shoaler Nymph.

The rule simply requires that the dimensions taken for the midship section below water, whatever they may be, shall be occupied by boat, by something that gives space and accommodation, and that the dimension of depth shall not be immoderately extended simply by the fin or keel.

Such yachts as the Minerva or Nymph, and indeed everything but the most extreme kind of craft are above the limit fixed, and well out of the influence of the rule, even if it was to be operative in the class to which they belong.

It may be here stated that very few yachts of over 20ft. l.w.l. have so far been built, having so small a co-efficient for the midship section as 35 per cent. It appears quite likely that for this class some owners and designers may elect to build yachts of even fuller form than that which has been adopted as normal, and they will in this way secure increased space and roominess.

The purpose, however, held in view in devising the rule, is to secure to the owner who would build a serviceable little craft the assurance that he can do so without being subjected to undesirable and unfair competition. The special rule here referred to has its limit of application in the Larchmont Y. C. to the new class. It may perhaps be found to serve desirable ends in other classes, and with the same or with a different co-efficient be used to check the development of undesired features, and of excessive draft in vessels of larger size, in which the need of room is less felt. The work of the committee is fully covered in the following report to the club:

*To the Trustees of the Larchmont Y. C.:*

The undersigned, a special committee appointed to prepare rules and restrictions for a special racing class of yachts about 30ft. in length, herewith present, as the result of their labors, the annexed rules:

It has been the aim of the committee to provide for the building of a class of yachts which would be fast, and at the same time be available for cruising. We have also sought to give to designers and builders the widest latitude as regards type and form, consistent with what we believed to be the essential features of such a boat as it has been our purpose to encourage. Our report is the result of many meetings and the fullest discussion of all questions involved, and is concurred in unanimously by the members of the committee.

NEW YORK, Dec. 1, 1894.

---

## Larchmont Yacht Club.

RULES AND RESTRICTIONS GOVERNING SPECIAL 34FT. RATING CLASS.

1. There is to be no time allowance.

2. Length on load waterline shall not exceed 30ft., nor be less than 28ft.; extreme length on deck shall not exceed 45ft.; least freeboard shall not be less than 24in.

Sail area, measured according to the rules of the Larchmont Y. C. (as modified by these rules), shall be such that no yacht in this class shall exceed 34ft. racing length.

The racing measurement of each yacht, as ascertained by the rules of the club in the customary way, shall be modified by an addition to such measurement in all cases where the immersed midship section (inscribed within a parallelogram which shall touch its extremities), shall fall below thirty-five per cent. of the area of such parallelogram. The largest transverse vertical section shall be taken as the midship section and the parallelogram shall be taken to the lowest part of the vessel at this point or forward of it. Of any greater depth which may be found aft of this point, one-third shall be added to the depth of the circumscribing parallelogram.

For every unit of percentage which the midship section, as defined above, shall fall below 35 per cent. of its circumscribing parallelogram an equal percentage shall be added to the racing length of the yacht as measured in the usual way. The formula to be used is in effect an addition to the old one, and is as follows:

$$\frac{\sqrt{S.\,A.} + L.\,W.\,L.}{2} \times \frac{135 - C.}{100} = R.\,L. \text{ for this class;}$$

C in the formula representing the co-efficient of the midship sec-

tion, and expressing its relation to the parallelogram within which it is inscribed.

*Example.*

$\sqrt{S.\ A.}$ being 36.74, L. W. L. 28, C. being 30.

$$\frac{36.74 + 28}{2} \times \frac{135 - 30}{100} = 34.$$

In practice the nearest whole number will be taken for the co-efficient.

The position of the midship section shall be indicated by a copper nail or other mark, so placed as to show 3in. above the surface of the water when the yacht is in racing trim; and a drawing showing in outline the vessel's keel, and another showing the midship section with the position of the waterline indicated, both duly certified as to their correctness, shall be furnished by the owner to the regatta committee when the yacht is entered for a race.

All measurements shall be verified by the measurer of the club when required.

3. Each yacht must be wholly decked, except the space taken up by the cockpit cabin house or skylight (all of which must be permanent), and the hatches.

The width of the cabin house (or skylight) or cockpit at any place shall not exceed two-thirds the width of the boat at that place.

The cockpit must be watertight and its floor not less than 9in. above the load waterline.

The cabin shall not be less than 10ft. in length, inside measurement, and at each end there must be a permanent bulkhead of wood.

The least height from the cabin floor to under side of deck beams shall be 4ft. 6in.

The least head room in the cabin, over a floor space of not less than 20sq. ft., shall be 5ft. 4in., and amidships, near the entrance to the cabin, over a floor space of at least 8sq. ft., the least head room shall be 5ft. 9in.

The least head room in the forecastle, over a floor space of not less than 3sq. ft., shall be 4ft. 3in.

All ballast must be permanently fixed, and should any alteration be made in the ballast or in the measurements necessary for calculating the sail area, a report thereof must be made by the owner to the measurer and the yacht re-measured.

The centerboard, if any, shall not be weighted more heavily than is necessary to sink it readily and in no case shall the weight on the raising pennant exceed 150lbs.

The top of the centerboard trunk or casing must not be lower in any place than 18in. above the load waterline.

4. There shall be no restrictions as to the sails to be carried.

The sail area abaft the mast, as measured by the rule and adopted for this class, shall not exceed 70 per cent. of the total sail area.

5. The following equipment must be on board when yacht is measured, and shall not be removed or used as shifting ballast during a race, viz.: Anchor, weighing not less than 50lbs., and at least twenty fathoms of cable; water tank, or breakers, of at least 10gals. capacity; five serviceable life-preservers, stove and utensils suitable for cooking for four persons, boat hook, bucket, compass, side lights and anchor light, fog horn; the cabin transoms, or berths, to be furnished with cushions or mattresses, the forecastle to have two furnished berths.

6. The crew is limited to five men, including the helmsman, who must be an amateur; not more than two members of the crew may be paid hands.

7. Except as otherwise provided in these rules and restrictions, the sailing rules of the Larchmont Y. C. shall apply to all yachts in this class and to the races in which they participate.

JOHN HYSLOP, E. A. WILLARD,
A. BRYAN ALLEY, HAROLD A. SANDERSON,
JOHN F. LOVEJOY, FRANCIS M. SCOTT.

## The Rights of a Challenger.

In scanning every week a large number of American newspapers, great and small, we are led to speculate as to how far they do really represent, as they all pretend to, the deliberate and honest convictions of American sportsmen, or even of the people at large, on the subject of international sport. For the sake of the national reputation before the whole world of sport, we sincerely hope that the great majority of the statements and opinions seen in print do not represent the true views of the American people, but rather of a comparatively small number whose violent prejudices make them the most valuable aids of the sensational news gatherer, and our personal knowledge of the manner in which "news" is manufactured and public opinion misrepresented in yachting circles about New York, leads us to believe that this is the case. The many extracts which we quoted last summer from American journals in connection with Vigilant are evidences of this prevailing spirit of untruth and unfairness; and they are amply supplemented by the more recent comments on the challenge of Lord Dunraven.

This subject is now under discussion by the press of the whole country, but it is safe to say that not more than one in a dozen of those who write on it is qualified for the task save by a complete ignorance of the rules and usages of yacht racing, the history of the contests for the America's Cup and of other international racing—and by the narrowest prejudice and illiberality. It is a welcome relief to encounter at rare intervals a writer who, whatever his opinions on specific points, is fully conversant with his subject, and animated solely by the true principles of fair play.

To the writer who approaches his task from the too common standpoint of bitter hostility to everything English, coupled with the assertion that we are at least better and fairer sportsmen, and its corollary, that anything is justifiable in opposing them, there is a deep mine of research open—the Stamp Tax, the oppression of the Colonies by the mother country, the Dartmouth prison ship, the aggressions on American commerce, the War of 1812, and on, down to the Trent, the Alabama and the Shenandoah. Even if the argument be confined to the strict domain of sport, there are many instances in which Americans have received not only discourteous but unfair treatment in England. If such an argument of hatred and retaliation is at all permissible, then there can be but one logical conclusion—that it is beneath the dignity of Americans to associate in nominally friendly sport with a people so far below them. Even when limited strictly to international yachting, this conclusion is inevitable; if it is true that the British yachtsman is a bad sportsman, unfair, dishonest and given to practices condemned by gentlemen, as has been repeatedly stated in American papers this year, then Americans can only lower themselves by meeting him on his own ground, and a proper self-respect makes it imperative that they should absolutely decline all intercourse with him.

Even at the risk of arousing anew the old charge of Anglo-mania we cannot subscribe to such narrow beliefs, but prefer to take a broader and more liberal view—that all fairness and generosity in sport, especially in yacht racing, is not confined to one side of the great Atlantic, the side, by the way, which produced the new deed of gift; and all that is mean, dishonest and unfair, to the other side. We believe rather that human nature is the same the world over; and that even the best and fairest of men are prone to be swayed by self-interest in the keen pursuit of sport, whether under the striped flag or the crossed one. It is not a pleasant thing to admit, but there is no escaping from the fact that human nature, even in the best of sportsmen, is a struggle between good intentions and selfish desires; the latter sometimes showing on top when least expected.

As far as the past is concerned, there is much besides the refusal to meet the old America in open races, or even the Arrow-Mayflower incident, for both sides to forget; there are incidents by the dozen in the history of the defense of the America's Cup which would look very badly to-day in the light of modern racing usage. As for the present, we believe that the standard of fair play and fair sportsmanship is quite as high on one side of the ocean as the other; in neither case perhaps on quite an ideal plane or entirely above the infirmities just mentioned. In this respect yachting is quite as advanced, and improving as rapidly as any other sport, and the general conditions of match sailing, national and international, have never been as fair in the last five years.

If there is, however, one detail of the sport which should be nearer than all others to the ideal of perfect fair play, it the contest for the recognized sailing trophy of the world, the America's Cup. For those who would debase it to a means of retaliation for a long list of grievances, real or imaginary, against England, we have the deepest contempt; and they are but little better who seek to retain it by means whose unfairness is recognized, under the plea that British yachtsmen would do the same if they held it. The continued possession of the Cup under the slightest stigma of unfairness is no credit to Americans but a national disgrace; far better that it were lost under perfectly fair conditions, even if never regained, through the dishonesty of a new holder. It is not enough that the conditions today are fairer than ever before; it is not alone necessary that half or two-thirds of the conditions should be above question; but that each, down to the most trivial requirement, should be in accordance with the highest standards of yachting usage.

What these standards are is best understood by referring to the conditions under which private matches are arranged, by a true mutual agreement, between two individual yachtsmen. Each is on a perfect equality with the other, free to ask what he pleases for himself and to object to any demand of his opponent which he may deem unreasonable or even disadvantageous to himself. Neither is under obligations to the other, neither is placed in the position of asking favors which may be refused. If such a basis of agreement is recognized as the proper one for a trivial match for small private stakes, certainly no lower standard can suffice for a great international trophy; and yet, how different is the position of a British yachtsman who dares to challenge for the America's Cup from that which he would occupy in arranging for a private match with a fellow yachtsman? Under every construction of the various deeds of gift, he has been placed in the position of a suppliant, compelled to ask favors of the holder, every right being denied him save the final one, of one and later three races under terms seriously to his disadvantage.

The position in which each successive challenger has been placed by the holder is not only one which no man could occupy and retain his self-respect and independence, but it has been made infinitely worse by the inevitable cry of "generous concessions," originating with a certain set of yachtsmen, and echoed abroad through the press until it has been accepted as true by many fair-minded persons. That there have at times been veritable concessions made, is true, as in the case of the acceptance of a challenge from Galatea in the same year as Genesta, 1885; but they are so few as to be notable as exceptions beside the rule which denied the challenger his rights to a full and fair mutual agreement, and compelled him to fight anew each year until a few were thrown to him as alms.

Never was this more clearly shown than in the present case; wise or foolish, reasonable or unreasonable, the requests or suggestions of Lord Dunraven were no more than he had a perfect right to make, as the equal of the holders in coming to a mutual agreement over conditions. The position which he has been placed in to-day before the American public, unacquainted with the customs and usages of yachting, is a sorry one—that of a greedy, over-reaching sharper, unmindful of the kindness and consideration accorded him in the previous contest, and intent only on securing further unfair advantage from his generous and unsuspicious opponent.

That this is so is due even less to the desire of the press to cater to a discreditable public sentiment, real or imaginary, than to the position in which the challenger has been from the first, and still is placed by the holder; a position which under the original deed was possible only through a gross misinterpretation of both letter and spirit, but which in the new deed is an inevitable consequence of the transposition of the mutual agreement clause from its original important position to a mere foot note to the obnoxious dimension clause which dictates the essentials of a challenge. A challenge once made in the only form in which it can be legally recognized by the club under the new deed—the tardy interpretation of the mutual agreement clause being a device so shallow as to belittle the intelligence of those who have accepted as well as those who made it—the challenger is completely in the power of the holders, compelled to sue humbly for what should be his by right, and getting it, if at all, only as a favor.

We look upon Lord Dunraven as a fair and honorable gentleman and a good sportsman, anything but the combination of knave and hog that he has been pictured by American pens; but at the same time we have a very poor opinion of that judgment which has led him to sacrifice his self-respect and to compromise the rights of future challengers by thrice insisting on a race under the humiliating conditions of the new deed of gift. We hope that not only he, but other foreign yachtsmen who may be inclined to challenge in the future, may now realize fully that their rights to stand as the equals of the holders in arranging for a contest; the rights guaranteed to them by the owners of the America in 1857, can never be regained as long as the new deed is in existence, and they are content to challenge under it, directly or indirectly.

## The Dunraven Challenge.

In addition to the cable message published last week, the committee sent the following letter to Lord Dunraven:

NEW YORK, Dec. 11, 1894.

MY LORD: The committee have to acknowledge the receipt of your letter of Dec. 1.

We think it much better to leave all unsettled minor questions until you arrive in this country, with the assurance that your views will receive every consideration.

While we cannot consent to racing at Marblehead or Newport, we are convinced that you overestimate their advantages. The accessibility of the starting point, a great convenience, at either of these places, would, in our opinion, increase the number of accompanying vessels, and neither course would be so clear or free from tides as that off New York.

We much regret that you were not able to earlier announce your intention of challenging, so that we could have had ample time to arrange terms. You will recollect that the correspondence in 1892 ended very hurriedly, and can hardly be said to have reached a definite and satisfactory conclusion. The committee at that time held that the challenge was satisfactory only if explained by your letters, and you, though consenting to this for yourself, distinctly disavowed any authority from the Squadron to consider your letters as explanatory of the challenge.

For this reason we much regret that the present challenge does not state the few necessary primary conditions without reference to previous negotiations. The indefiniteness as to the right to use your letters in 1892 as explanatory meant uncertainty as to the terms of holding the cup if won by you, and this brings us back to the point on which you insisted in 1892, namely, that the challenger should limit his rights, as a winner, by a previous covenant with the New York Yacht Club.

We cannot but believe that much difficulty will be removed could you be persuaded to take our point of view on this question. We cannot understand why, with power to make any agreements desired for a match, a holder of the cup—the Squadron, for example—should expect us to covenant that they must do what they can do and what to do, and why, after all the correspondence that has taken place, there should be any fear, in the absence of such an agreement with us, of even appearing to expect, as the party challenged, terms different from those under which you challenged, as expressed in your letter of Nov. 7, 1892.

Now, we think that as any challenging club can bind itself in honor to all interested parties by announcing what it will or will not exact, in the event of winning the cup, we should not be expected to become parties to any agreement as to future terms to which our consent is in no way requisite.

We have gone into this subject somewhat at length, as we consider that the holding of the cup is fully and liberally provided for in the deed and do not consider any additional stipulations proper or permissible.

We endeavored in the despatch sent you yesterday by cable to remove any possible cause for misunderstanding should you win the America Cup from us next year, and to express this in the simplest and most direct form.

We have the honor to remain, yours very respectfully,

JAMES D. SMITH, Chairman.

A meeting of the committee was held on Dec. 12, ex-Com. Smith being absent through an attack of gout. Only four members were present, and nothing was done

On Dec. 15 the following cable message was received:

"Canfield, Yacht Club, New York. Cablegram to Dunraven, 10th, brought before flag officers. Matter must be submitted to the club. If challenge accepted now and representative wins, the Squadron will not demand the cup failing a satisfactory agreement as to receipt. Please cable.—GRANT.

On the same day, at 3:30 P. M., a meeting of the officers of the Royal Yacht Squadron was held at Marlborough House, London, the Prince of Wales being present, with Sec'y Grant, Lord Dunraven and others. After half an hour, the meeting adjourned without any positive action, and nothing will be done until a meeting of the Squadron is held, probably on Dec. 20.

A meeting of the Cup Committee was held on Monday, Dec. 17, to consider the cable, received on Dec. 15.

The following reply was sent:

NEW YORK, Dec. 17, 1894.

"*Secretary Grant, Cowes:*

"As the America's Cup is purely a challenge trophy, and only valuable as such, we cannot agree that the Squadron, after having won a match for it, may reject the custody of it.

"By cable of Dec. 10 we agreed to accept challenge on condition that the Squadron would receipt for Cup on terms of deed without conditions.

"We will wait until Jan. 15 for an official reply from the Squadron and fix the first race ten months from the receipt of their answer, and will advance date, if possible, later on.

JAMES D. SMITH, Chairman."

# MODEL YACHTING.

## Lead Rudders for Models.

*Editor Forest and Stream:*

I have been reading with great interest Mr. Fisher's articles on model yacht building. In my time I have constructed some twenty-five of these craft, but never ventured on anything larger than about 24in., and have got no further as a builder than the "bread and butter" plan, and that brings me to the seat of my trouble. Will Mr. Fisher or some one tell me of a glue ready made (I have tried various receipts for home manufacture with unsatisfactory results), which will stand use in salt water? Although well painted and varnished, all the boats made by my son or myself invariably begin to open in the seams after two or three years use. Then there is nothing to be done but to rig them up spick and span, and relegate them to a bracket over the door, they are only good to look at.

In the way of rudders we have used thin sheet lead soldered on to a brass rudder-post, the upper end cut off square, but left long enough to go a short distance into the rudder post; the lower end brought to a point and working in a hole in a brass plate on the heel of the stern-post. Three are about all that are needed, one for going close hauled, one for reaching and one for going before it.

The first one is so small that it might almost be considered superfluous, but we have found that it helps greatly to steer a straight course, every change in the wind being met by the rudder.

The second, for running with sheets eased off, should be twice as large, and the third nearly twice as large as that, then take your model, somebody to row you, and a jack-knife, and try experiments. Your rudders, especially the first and second, will probably prove too large; this is where the jack-knife comes in. Whittle away at your rudder until a few trials will show you that your model will sail quite as true a course as the average helmsman can steer.

Sailing before the wind is harder, but with a lead rudder we have succeeded in getting a 24-inch (o. a.) cutter with spinaker and gaff-topsail set, to sail half a mile steadily; and in one case where the breeze was so strong as to finish by driving her nose under water and turning her end for end. * * *

## Amateur Designing.

AT the last meeting of the American Model Y. C., a class was organized to attend a course of lectures on the first principles of yacht designing by Mr. F. Nichols, assisted by Messrs. Gustave Grahn and Herbert Fisher, the object being to induce the members who are not conversant with the fascinating art to design their own models on paper for building purposes.

# YACHT NEWS NOTES.

At the works of Messrs. Chas. L. Seabury & Co., Nyack, N. Y., three steam yachts are on the stocks, the largest being that already mentioned, for F. C. Fowler, of Moodus, Conn. This is a flush decked cruising craft of composite construction, 120ft. over all, 97ft. l.w.l., 16ft. beam, 9ft. depth, and 6ft. 6in. draft. The keel, stem and stern-post will be of white oak, the planking of yellow pine, double skin, fastened with composition bolts and nuts, the vessel having the usual steel frames, keelsons, straps, stringer and bilge plates and deck-beams of a composite hull. The deck house, 16ft. long, will be arranged as a dining hall, with steering bridge above. The accommodation is ample and well arranged, saloon, owner's and guests' rooms forward, and officers and crew and galley aft. The machinery, for a guaranteed speed of 16 miles for three consecutive hours, includes a triple expansion engine and patent water-tube boiler, both of the Seabury type, the sail plan showing a schooner rig.

The second yacht is of wood throughout, a 14 mile cruising craft, with trunk cabin and schooner rig, for a New York owner. She will be 65ft. over all, 52ft. l.w.l., 11ft. beam, and 4ft. draft, with Seabury engines and boiler, the former triple compound. The crew will be berthed forward of the pilot house, abaft which is the owner's room, with toilet connecting. Abaft the engines is the galley, with a toilet room abreast on starboard side, then the main saloon, with ice and wine lockers.

The third boat, for Dr. W. A. Haskell, of Alton, Ill., vice-commodore of the Illinois Y. C., is a 16 mile craft, of similar construction to the second, 60ft. over all, 54ft. l.w.l., 9ft. beam and 3ft. draft. In spite of the small size, the accommodations for both owner and men will be very complete. The yacht will be fitted with electric lights throughout, with a search light on the pilot house. The Fowler yacht will be ready by June 1, the Haskell yacht by March 1 and the other by May of next year. The firm is doing its customary work in all departments, hull, engines and boilers.

The fifth annual meeting of the Douglaston Y. C. was held on Dec. 4 at the Hotel Brunswick. The following officers were elected: Com., C. A. Gould, steam yacht Neaira; Vice-Com., E. N. Doll, sch. Windward; Rear Com., N. Greenfield, steam yacht Erna; Sec'y, J. B. Hixon; Treas., G. A. Corry; Governors—H. D. Bristol and J. H. Taylor.

The Yonkers Corinthian Y. C. held its annual meeting on Dec. 6, the following officers being elected: Com., A. J. Prime; Fleet Captain, L. Quanchi; Rec. Sec'y, F. A. Rigby; Fin. Sec'y, H. J. Ritchie; Treas., A. M. Potter; Meas., W. E. Myers; Chaplain, Rev. W. Prime; Fleet Surgeon, Dr. J. C. Bennett; Steward, F. M. Ward; Trustees—H. Skinner, N. Quick, L. F. McNett, J. B. Odell, A. T. Rose and W. T. Georgen; Regatta Committee—J. Dickson, A. V. Youmans, F. A. Rigby, L. F. McNett and A. M. Pearsall; Membership Committee—J. J. Lawrence, J. J. Potter, H. Rawcliffe, A. J. Beaudrias and M. W. Hall; Delegates to New York Yacht Racing Association—A. J. Prime, B. F. Sutton and Edwin Moore, Jr.

The question of a new and larger club house for the New York Y. C. has been under consideration for several years past; and for some time past a special committee has been at work on the subject. The result of its labors is a recommendation, that will be accepted by the club, to the effect that the present house on Madison avenue be retained, the lease being extended for five years more, and that it be thoroughly remodelled and refitted. This will be done shortly at considerable cost.

Flossie, schr., has been sold by Brereton Pratt, of the Philadelphia Y. C., to Franklin Beames, of the Brooklyn Y. C. She is a centerboard boat, 57ft. l.w.l. and 16ft. beam, built in 1887.

The Herreshoffs are not so rushed with work at Bristol that they could not take an order for a cup defender, yet there is a fair amount of work on hand and a prospect of more. There are two steamers and three sailing yachts now in hand in the shops, and a moderate force of men at work, which could be largely increased should a rush of work come. The largest steamer is a 130-footer, for T. R. Hostetter. She is of wood, of solid build, and will have triple expansion engines and a speed of about 16 miles an hour. The owner's quarters are forward and there is a comfortable deck saloon over them. The yacht steers from the bridge over the saloon. She will be schooner rigged and have an electric light plant and and all the latest devices for comfort and safety. She is being built in the north shop, is nearly planked and could be launched within a month should her place in the shop be needed for the building of a Cup defender. The second steamer is a 75-footer, for the use of President John B. Herreshoff, of the company. She is also of wood, but is of the economical cruiser type, of which the company has made a specialty in recent years, and is much like last year's Eugenia. She will have a speed of 10 or 11 miles with great coal endurance for a boat of her size. Owner's quarters will be forward and galley aft. The yacht is building in the lower end of the south shop and could be launched in less time than the larger steamer. The sailing yachts in hand are the 20-rater for Howard Gould for his British campaign of next season, a 20-rater for parties in Germany and the 30-footer for George Owen, Jr., for use at Marblehead, which was announced a week ago. The 20-raters are duplicates, and will be fin-keels of about 45ft. waterline and 60ft. or more over all. The frames for these yachts are bent on the moulds and will be set up in the south shop ahead of the steamer. The firm gives no dimensions or particulars as to build, but the writer feels at liberty to say, after a look through the shops that they promise no radical departure from previous Herreshoff fins, but are good round-bodied boats with easy lines and indications of power. The 30-footer is in the north shop and is being planked bottom upward, according to the usual Herreshoff style in small yachts. She looks to be a little narrower than the Handsel and has a round and moderately full midship section with a very easy sweep to the lines fore and aft. Her overhangs are not extreme and she promises an able boat, with speed enough to make the Handsel hustle to retain first honors in the class. The yacht is to have a pole-mast rig and good cabin accommodations under a low house. She will be ready for the opening of the season. Although both President J. B. and designer N. G. Herreshoff say that no lines have yet been drawn on a Cup defense order, there is little doubt but that the problem of building a faster boat than Vigilant has been carefully thought out and that plans and estimates could be placed at short notice before any yachtsman or syndicate having the building of a defender in mind.—*Boston Globe.*

But little is doing at the Boston yards, the alterations to the bows of Thetis being completed at Lawleys, and the yacht converted to the schooner rig. The firm has also finished a 21ft. knockabout and has an order for one of 27ft. The new bow of the steamer Admiral is nearly finished, and another steam yacht, Harriet, is out for a new stern and pilot house. At Quincy Point, McIntyre & Kirk have finished a knockabout for A. E. Schaaf, and have another in hand. Messrs. Waterhouse & Chesebrough have designed a cruising cutter of 30ft. l.w.l. for an Eastern owner, a craft 47ft. over all, 8ft. beam and 6ft. draft. She will have a small sail plan and good accommodation, the interior being rather elaborately fitted up. They are also at work on a design for a centerboard knockabout for Mr. Fred Dunne, one of the three owners of Alpha in her first season; the yacht to be built by Ambrose Martin. The latter builder has now in hand a 21ft. centerboard knockabout. Wm. Smith is at work on but one boat, a 28ft. craft.

Yampa, schr., lately purchased by Mr. Richard Palmer, is at Lawley's yard where Capt. Edward Sherlock is fitting her for sea. She will sail for the Mediterranean early next month.

The Illinois Y. C. held its annual meeting on Nov. 26, the following officers being elected: Com., Edgar Ames; Vice-Com., Dr. W. A. Haskell; Sec., C. W. Milnor; Treas., J. H. Booth; Executive Com., Messrs

Ames, Haskell, W. L. Sparks, W. A. Jones and W. H. Himpidge; Measurement Com., Messrs. Geo. Dickson, R. Garstang and H. S. Turner.

Mr. A. Cary Smith is busy with a design for a steam yacht 100ft. long, to be built of steel; a schooner for the 70ft. class, for racing; a 21ft. catboat for John M. Dickinson, and an 18ft. cat for F. S. Douglas.

Lord Dunraven has brought suit in the Admiralty Court against Mr. A. D. Clarke, owner of Satanita, for the loss of Valkyrie through collision with the former vessel last July, and the case comes to trial this week.

Eleanor, steam yacht, W. A. Slater, was at Marseilles late last month going on the dock and having a number of repairs made before proceeding to the Suez Canal on her voyage around the world.

The monthly yachting journal originally founded as *The Rudder* by Mr. T. F. Day, the yachting writer, and later combined with the *Sail and Paddle*, has just been re-purchased by Mr. Day in connection with Messrs. H. W. Rogers and W. L. Dudley, and will in the future appear in a greatly improved form. Mr. Day is an old yacht sailor and a very clever yachting writer, his contributions having often appeared in our colums. Mr. Rogers is an artist and writer who has for some time been associated with the late owner of the paper. Mr. Dudley is a well-known canoeist and writer, and will look after the canoeing interests of the paper.

Mr. Lewis G. Nixon, naval constructor for the Cramps, has purchased the shipyard of Moore & Sons, at Elizabethport, on Staten Island Sound, and will manage it himself. The class of vessel which will be built is as yet unknown.

Gitana, schr., has been sold by the estate of the late Wm. F. Weld to Percival W. Clement, of Rutland, Vt., a railroad man, who is just going in for yachting.

# Canoeing.

## "The Model Yachtsman & Canoeist."

It is with regret that we reprint the following valedictories of the editors of the *Model Yachtsman & Canoeist* as follows:

"Since giving my intimation last month that this our journal would close its career with the December number, I have received a large number of letters on the subject. All contain expressions of regret in varying cadence, some contain criticisms of my way of conducting the paper, (good natured criticism be it understood) some offer suggestions for the future, a considerable number offer a share of financial assistance, and several say it must not be allowed to die. I must first thank all these correspondents; fortunately I can agree with nearly all their sentiments, if I cannot carry out their ideas. I have not been able to corrrespond direct with them for the present. They will oblige me by taking, along with all my kind supporters and correspondents, my hearty thanks for their assistance both now and in the past. I shall sadly miss my stream of friendly communications. I shall lament for the medium through which I have for so long addressed my model yachting friends throughout the world. The severance is, however, inevitable in spite of all; as notwithstanding the kind offers of financial assistance this must be the last issue of *The Model Yachtsman & Canoeist.*

"It seems to me only a courteous thing that I should fully enter into the reasons, as had it been a question of money alone, the stoppage might have been averted.

"Our canoeing editor, Mr. Geo. F. Holmes, a year ago gave notice of his intention to give up the task that he has so well performed. The difficulty of finding suitable canoeing matter in these days when canoeing is on its last legs, and small yacht and boat sailing has lured away its votaries, can readily be understood, and also the objection that naturally arises in a man's mind, when he has to make continual sacrifices to conduct part of a journal, that cannot exist without seeking charitable donations. As we have no other gentleman here and in touch with us that can step in and fill Mr. Holmes' place, his resignation was almost fatal in itself to our further continuation.

"My own business engagements do not leave me the time at liberty that I used to possess, therefore I am incapable of increased effort to make up for a loss in any other direction. I may at this point express my perfect agreement with Mr. Holmes in his decision, and place on record the pleasure it has always given me to have a colleague of such ability and undeviating courtesy and consideration to assist us in keeping on the journal.

"The financial difficulty has arisen through the lack of advertisements, not through any decline in the number of subscribers. The latter being an increasing rather than a diminishing quantity.

"The friends and supporters of the journal will see by this explanation that it is not one reason, but three reasons, that compel me to bring my labors for model yachting to a close, and to part company with that which has been my chief enjoyment for years.

"To those who have offered a friendly criticism I am not at all out of harmony. I feel sure that if I were in their place similar ideas would be very likely to arise with me. I know all that has been offered in the best possible spirit and for the welfare of the sport. They have aimed at the same mark as myself, they have thought I might have used better weapons. I am, however, well satisfied that were they in my position, with such a diversified constituency to please, they would have been much of the same opinion as myself.

"And now, as Editor of *The Model-Yachtsman*, I bid all my friends good bye! For 11 years many of us have sailed pleasantly together. We have had the generous commendation of *The Field*, *The Forest and Stream*, *The Yachtsman* and many other papers of note for our efforts. There has been a good deal of work at times but an unmeasurable amount of pleasure. I find an immense difficulty in saying the last word, but it has to be said, and as I shall never forget the many acts of kindness that have been done for me and the assistance that has continually helped me to perform my pleasurable duties to model yachting, I hope to have a little nook in the remembrance of all whose interest has run side by side with my own. Yours faithfully,

THOS. A. BRUCE.

It is not pleasant to reflect that one is writing for the last time for the readers of the *Canoeist*.

We are assured by many kindly letters that its appearance has each month been heartily welcome, and that its non-appearance will leave a blank.

We can say that we have done our best to make it both interesting and useful to canoeists and those who share our love for aquatics, and our regret at its discontinuance is the more keen because we believe the paper was never more widely read than during the last year of its existence.

Unfortunately, however, the support which enables most papers to run their course with profit, viz., a good number of paying advertisements, is now so far wanting that the journal cannot continue.

In its earlier days the paper was devoted entirely to the interests of model yachting, but its proprietors were ready, as soon as opportunity offered, to open their columns to canoeing news, which has of late years had about half the total space devoted to it, as well as a similar share of the illustrations.

Since the *Model Yachtsman & Canoeist* first came into existence many changes have taken place in canoeing. It has been said many times that the "racer of to-day is the cruiser of to-morrow," and in proportion as the racing conditions and rules have fostered a type of canoe which is fit, or the reverse, for cruising after the conclusion of its racing career, the prosperity of the sport has waxed or waned. Unfortunately the latter has been the direction of our sport for some time past, at any rate in connection with the canoe proper, although the canoe-yawl still holds her own in the estimation of many cruisers.

Changes of rule are now being proposed with a view of popularizing a really useful type of boat, and we hope that the efforts in that direction will be successful, and that in the course of a year the tide will turn and canoeing, the best of sports, will once more become popular, as it so well deserves to be.

## From Dunkirk to James Bay.

COBOURG, Dec. 10.—*Editor Forest and Stream:* Your correspondent who is contemplating a canoe cruise from Dunkirk through to James Bay must be a very enterprising character and a man after my own heart. If he will correspond with me personally I may be able to help him. From Midland or Penetangshene the east and north shores of Lake Huron offer no great difficulties to the canoeist, provided his canoe is seaworthy and be up to his work and prepared to lay by during head winds, and paddle during calms. Lake Superior is a little more open and exposed, but may be coasted without difficulty or danger by an old and experienced hand. The only really dangerous coast is that called the "no boat landing," extending for some twelve miles westward from near the mouth of the Michipicoteu River—on a calm evening this has no terrors. From Lake Superior there are several routes to James Bay, the most frequent being by way of the Michipicoten, Dog Lake, Mesinobie Lake and the Moose River. Another lies by way of the Pic River and McKay's Lake to the outlet of Long Lake, and thence down the Kenogami. The route he mentions is not used, the regular route turning north from the Ogoké and following a chain of smaller lakes and streams to the Albany near Martin's Falls. There is another route from Lake Nepigon by the Sturgeon and a chain of small lakes to the foot of Long Lake, and thence down the Kenogami as before. And still another route leads from Lake Superior direct in the neighborhood of Jackfield Bay to the head of Long Lake. The last is probably the easiest at the present time, and the Michipicoteu, the shortest in time and distance. I suppose I need not warn your correspondent that after leaving Sault Ste. Marie he is upon very solitary and unfrequented waters, and that an accident causing the loss or serious injury to his canoe is very apt to mean starvation for him. Hence he must be very sure of the efficiency of his craft and himself.

THE CHIEF.

## CANOE NEWS NOTES.

Silky, brindle bull-terrier, the pride of the Red Dragon C. C., and their mascot at the Croton Point meet, is dead. While faithfully following the janitress in the vicinity of the club house, she was struck by a locomotive and instantly killed. Many of the Croton Point campers will remember her ugly but good-natured face and her merry pranks as she followed some wandering Dragon through camp by day, or came over to headquarters at sundown with the boys for the day's gossip round the camp-fire. Others may recall her warning bark as they stole up hill from the "Gulch" after taps, bent on some nocturnal mischief. But all will mourn with the Red Dragons the loss of their famous little terrier, buried now under the shade of the old trees on the club grounds, her memory held in tenderest regard by those to whom her sagacity and fidelity made her a trusty companion and friend.—J. E. M.

CHAINED TO BUSINESS?

Can't go shooting? Do the next best thing. Read about it in FOREST AND STREAM.

# Rifle Range and Gallery.

## The Rapid Lyman System.

CHICAGO, Ill.—*Editor Forest and Stream:* I send you photograph of target score made by me, under these conditions: 500 consecutive shots, .22 L. R. cartridge, Marlin rifle, 40yds., Standard American target, 2½in. bull, off-hand; rifle fired 17 times without taking from shoulder, and so on for 500 shots. The shooting is along the line advocated by Mr. Lyman for small bores, viz., rapid firing, the ultimate object being the use of the .22cal. in wing shooting. I used a telescope sight.

THERE IS A PRIZE FOR BEATING IT.

I will give a prize of $20 to any one in the United States who will excel this target, the target and proper witnesses' signatures to be sent to FOREST AND STREAM and published in that paper, and the original to be my property. Of course I expect my work to be bettered if any good shots are interested, and my offer is made to encourage the sport.

J. W. MORGAN.

[We are preparing some targets after designs by Mr. Lyman as specially adapted to his rapid-fire system, and also as more nearly approaching the visual conditions of field work. Perhaps Mr Morgan will make his offer apply to work on the new targets, which will be ready soon after Jan. 1.]

## Zettler Rifle Club.

NEW YORK, Dec. 11.—The weekly shoot of the Zettler Club at headquarters this evening brought the same old group of regulars together in competition for the club prizes. In the race for the champion medal Flach and Dorrler made another tie, each with 246. Flach was also high for the 5 best scores. Flach and Ross tied for the best 10 shot score, each with 248. Scores:

Champion medal:

| | | | | | |
|---|---|---|---|---|---|
| L Flach | 246 | R Busse | 242 | H D Muller | 232 |
| M Dorrler | 246 | M B Engel | 239 | H Munz | 230 |
| H Holges | 245 | Gus Nowak | 239 | G W Downs | 225 |
| F C Ross | 244 | B Zettler | 239 | S Buzzini | 217 |
| C G Zettler | 244 | Dr Grosch | 238 | F Schmidt | 230 |
| B Walther | 244 | | | | |

Five best scores:

| | | | |
|---|---|---|---|
| L Flach | 246 244 248 244 247 | H Holges | 245 243 241 247 245 |

## Essex Defeats Excelsior.

JERSEY CITY, N. J., Dec. 12.—The Excelsior Rifle Club celebrated its seventh anniversary at its club house this evening. Invitations had been sent out to all the local riflemen, and the result was a large gathering of the patrons of the sport. The principal feature of the evening's entertainment was a 10-men team match between the Excelsior Club and the Essex Indians of Newark. The latter club is one of the oldest and strongest gallery shooting organizations in New Jersey. Some of its members have in the past made national reputations both in the gallery and on the 200yds. range.

The men composing the team which entered the lists with the Excelsiors this evening did not represent the shooting element of the club, but they seem to have been fitted to the task that was laid out for them, for they downed the Excelsior contingent to the tune of 25 points. Scores:

| Essex. | | Excelsior. | |
|---|---|---|---|
| T Holms, Captain | 219 | R H Duff, Captain | 221 |
| J Bauder | 233 | R H Pinney | 227 |
| G Weigman | 230 | W J Channing | 234 |
| M Lanwold | 217 | Jos Hughes | 220 |
| T C Dietz | 233 | W J Hennessey | 236 |
| C Cooper | 236 | G G Williams | 213 |
| P Ober | 219 | C Reers | 208 |
| A D Walter | 232 | C Boag | 229 |
| J K Walsh | 228 | J Spicher | 227 |
| E McCraith | 215—2264 | Wm Weber | 224—2239 |

## Our Own Club.

HOBOKEN, Dec. 13.—The weekly practice of the Our Own Club at headquarters to-night resulted in the appended scores:

| | | | | | |
|---|---|---|---|---|---|
| W Bohmcke | 226 | H D Stuhrmann | 232 | H D Hencken | 232 |
| J H Kruse | 236 | Finckenstadt | 232 | R O'Lane | 213 |
| W F Dilger | 232 | Capt G F Seymour | 211 | E Giesecke | 200 |
| F Vanderheyden | 210 | F Kloepping | 231 | F W Kroeger | 220 |

The Our Own Ladies Contingent held an informal shoot at the club house Wednesday night. Scores are appended:

| | | | | | |
|---|---|---|---|---|---|
| Mrs. Seymour | 210 | Stein | 210 | Kelly | 200 |
| Martin | 200 | Meyer | 215 | D Eberstaller | 190 |
| King | 185 | Thorn | 175 | M Ryan | 175 |
| Boardman | 230 | Wiese | 175 | M Eberstaller | 185 |
| Draffin | 175 | Misses Prien | 235 | Griffin | 160 |

A committee of the Our Own Rifle Club waited upon the members and arranged for the initial monthly session to be held on Thursday, Dec. 20. A number of capital artists will be engaged for the event.

## Chavant—Rosenbaum.

GREENVILLE, N. J., Dec. 17.—There was an impromptu match shot off on Saturday afternoon in the Greenville Park, between C. H. Chavant, of the Greenville Club, and Wm. Rosenbaum ("Buff"), of the Empire Club. The conditions were 25 shots each, for the refreshments for the party. The match was a one-sided affair. Chavant won by 52 points, an average of two points to a shot. "Buff" should look for an easier mark than Chavant. Scores:

| | | | |
|---|---|---|---|
| Chavant | 15 23 23 24 17 | Rosenbaum | 20 21 20 21 17 |
| | 23 23 23 23 22 | | 20 16 19 13 19 |
| | 23 21 19 20 19 | | 23 23 19 20 18 |
| | 23 16 18 19 22 | | 16 20 19 22 14 |
| | 22 25 22 21 19—525 | | 24 20 20 22 7—473 |

## Schlicht Rifle Club.

WEST NEW YORK, N. J., Dec. 10.—The Schlicht Rifle Club held its weekly class shoot at headquarters to-night, scores:

| | | | | | |
|---|---|---|---|---|---|
| J Diehl | 235 | G Reichert | 220 | Capt J Dedrick | 226 |
| P Maue | 214 | F Lambrix | 233 | H Aufderheide | 226 |
| A Dubline | 212 | A Meyer | 228 | G Schlicht | 240 |
| W Schlicht | 233 | C Schlicht | 214 | C Meyer | 236 |
| G Dorr | 228 | J Schlicht | 221 | | |

Medal winners: Geo. Schlicht, champion medal, 240; Jacob Diehl, first class, 235; Fred Lambrix, second class, 233; Capt. J. Dedrick, third class, 225.

F. LAMBRIX, Sec.

## RIFLE NOTES.

As the weeks roll by the interest of our riflemen in the coming international festival (Nationales Schuetzen Fest), which is to be held in Glendale Park, Long Island, during the week of June 30 to July 8, 1895, is growing rapidly. The executive committee (Vorstand) have received a great deal of criticism, inasmuch that it did not issue an English edition of the constitution and programme of the festival simultaneously with the German edition, which was issued some months since. Beyond what has been published in FOREST AND STREAM the English-speaking population of the country know but little in regard to this great festival. We are assured, however, that the English edition will be issued before the new year.

B. Koenig, the proprietor of Glendale Park, is losing no time in getting his park into condition to receive the army of sportsmen who will be knocking at his gates on June 30. A visit to the Park last week showed that the plot upon which the forty-five new targets will be located is ready for the carpenters to go ahead with the erection of the target house (butts) and shooting house. Delegations from the many societies interested in the festival will visit the park on Wednesday of this week (Dec. 19) to engage in the laying of the corner-stone for the new shooting house. Mayor Schieren of Brooklyn, with other prominent citizens of the Greater New York, will be there to assist in the interesting ceremonies.

It is expected that the park hotel will be taxed to its utmost on Wednesday night to accommodate the tired and hungry delegates when they get through pursuing that corner stone around to its final resting place.

Koenig says that any of our local riflemen who desire winter practice can find accommodations in his shooting house on any day in the week, Sundays included.

This is a feature that helped to popularize Wissel's Park in the past. Our German citizens when at home in Germany were accustomed to divide their Sabbath into two parts, one of which is devoted to church services and the other to recreation and pleasure. The morning finds them in the church. In the afternoon the whole family may be found in the Schuetzen park.

The Freitag Rifle Club will have a two-days' tournament, beginning Dec. 22, at the range, 24 Hancock avenue, Jersey City Heights. The election of officers will be held the first Friday in the new year.

A match is said to be on between teams representing the Essex Indians of Newark and the Greenville Club.

The Empire Rifle Club of New York has issued a "cartel" to the Greenville group.

A new rifle club has been organized in Hoboken. It will be known as the Young Men's Club, with headquarters at 423 Washington street.

The Zettler Rifle Club will hold its annual prize shoot in the Zettler gallery in January. Programmes will be issued next week.

There will be a monthly meeting of the delegates of the National Shooting Association (Schuetzen Bund) at headquarters, No. 12 St. Marks Place, on Friday night, Dec. 28.

Michael Dorrler, being dissatisfied with the result of his match with Plaisted lsst week, has challenged the latter for another match, 50 shots each, to be shot on Saturday of this week, Dec 22. Michael offers odds of five to one that he wins. Does this offer of such odds represent his best judgment, or his lacerated feelings, or both?

The St. Louis riflemen have issued a challenge to any club who desires to accept its conditions. This reminds us of the youth who dared the other fellow to come over into his yard and fight.

The old fashioned stipulations of ten pound rifles with three pound pull and other idiosyncrasies of the National Rifle Association have been laid on the shelf by our progressive rifleman.

The Our Own Rifle Club of Hoboken, with headquarters at No. 130 Hudson St., is in a flourishing condition. The influence of Judge Geo. F. Seymour the captain, is adding new members to the roll each week. The board of officers is as follows: Captain, George F. Seymour; 1st Lieutenant, August W. Steuben; 2d Lieutenant, H. D. Hencken; Treasurer, William Bohmcke; Secretary, J. H. Kruse; Financial Secretary, Robert O'Lone; Orderly Sergeant, David H. Page; Shooting Master, Adolph Malz; 2d Shooting Master, Aug. W. Steuben; Sergeant-at-arms, F. Dierker; Asst. Sergeant-at-arms, R. Hartkopf.

The new Winchester calendar for 1895 is one of the best of the many good ones issued by this firm. The drawings are from the brush of A. B. Frost, who is a sportsman and lover of the woods, and have all the dramatic points necessary for such illustrations. The upper part of the calendar pictures the successful termination of a winter bear hunt, the quarry lying in the foreground, and the two hunters near by looking well pleased with their success. The lower part of the calendar tells in a graphic way an incident of a canoe trip, when two hunters who have landed for a meal, are given an "Unexpected Chance" to bag a deer.

The Iroquois Rifle Club, of Pittsburgh, will hold a Christmas shoo at its headquarters, 1717 Jane street, S. S., on Wednesday, Dec. 25, Programme consists of cash prizes, turkeys and open sweeps.

### Plaisted Defeats Dorrler.

GREENVILLE, N. J., Dec. 15.—The 50-shot match between Michael Dorrler and Geo. W. Plaisted was shot of Armbruster's Park this afternoon. The weather was warm and clear, an ideal day for rifle practice. Both contestants previous to the opening of the match seemed to be in good shooting form, but it was only after the match was opened that the condition of the two was made prominent.

The conditions of the match were that neither man should have any practice shots. Dorrler was slow in getting on to his stride, and at the first turn in the race found himself trailing his competitor by 12 points. The second string added 4 points more to his trail. On his 39th shot he decided to retire, and packed up his kit. Upon being informed that his retiring would not disqualify him from paying or forfeiting the stakes, he decided that he would re-enter and fight for the stakes. It is not out of place to remark here that the stakes were "one thousand" (primers), new and used. Michael's delay in halting by the way contributed to his defeat, for he had hardly got started anew before the shades of night began to gather around him.

Michael was equal to the task of one grand effort; for, dismounting the cup from the rear sight, he shot *à la* Lyman and made 11 blank shots in the darkness then prevailing. Michael's effort, however, availed him nothing, except the satisfaction of a record for moonlight practice, for a close canvass of the two scores showed Plaisted a winner on the close margin of two points on a total of 1,065, an average of 21 3. The shooting of both men was erratic. The "Harlem Joker" suggested that they may been overtrained. Scores:

| | | |
|---|---|---|
| Plaisted | 16 20 23 22 19 21 17 22 20 23—202 | |
| | 23 24 21 23 21 21 24 23 21 23—224 | |
| | 19 19 25 25 24 21 21 23 22 24—223 | |
| | 25 23 19 23 20 19 22 25 22 21—219 | |
| | 17 17 23 25 21 16 22 18 17 20—196 | 1065 |
| Dorrler | 15 16 16 18 18 23 20 20 23 22—191 | |
| | 23 22 20 22 20 22 21 24 23 23—220 | |
| | 23 20 19 24 24 23 22 25 21 22—223 | |
| | 22 22 24 23 20 21 22 21 19 21—215 | |
| | 19 24 22 22 21 22 22 22 20 20—214 | 1063 |

## Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

### FIXTURES.

handicap 26-33yds, class shooting, $25 added to the two high guns.

Dec. 20-21.—ELIZABETH, N. J.—Two days' shoot of the Elizabeth Gun Club; first day, targets; second day, live birds.

1895.

Jan. 1.—NEWARK, N. J.—Fifteenth annual New Year's Day tournament of the South Side Gun Club. W. R. Hobart, Sec'y.

Jan. 1.—TOWANDA, Pa.—New Year's tournament of the Towanda Rod and Gun Club; live birds and targets. W. F. Dittrich, Sec'y.

Jan. 15-17.—HAMILTON, Canada.—Hamilton Gun Club's annual tournament; $1,000 added money. J. W. Bowman, Sec'y.

Jan. 24.—NEWARK, N. J.—Newark City handicap, 25 live birds, $10 entrance, birds extra, under the auspices of the Newark Gun Club. Shoot to take place at Erb's grounds.

Feb. 22.—ALBANY, N. Y.—First tournament of the Eastern New York Trap-Shooters' League, of the series of 1895, under the auspices of the West End Gun Club. Henry A. Kratz, Sec'y.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York; $1,000 guaranteed, all surplus added.

May 8-10.—WEIR CITY, Kas.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $200 in cash added. W. W. McIlhany, Sec'y.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30.—CANOJOHARIE, N. Y.—Two-day's tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec'y.

June 4-7.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia, John C. Shallcross, Sec'y, Frankford, Pa.

## CONTROL OF TRAP-SHOOTING

THE letters we continue to receive on the proposed National Association of Trap-Shooters, all have the same sound ring. There is a sentiment abroad that something must be done, and that speedily, if trap-shooting is to retain its popularity, to prevent dropping for place and pooling or combining.

There will be no difficulty in regulating the "dropper," an example or two will bring him to time quicker than any agitation on the subject will do. As soon as he learns that he must shoot straight or be debarred from all future tournaments held under the auspices of the National Association, Mr. Dropper will shoot straight just as well as the rest of them.

President Hughes, of the Pennsylvania State Sportsmen's Association, touches upon an important point. He is opposed to the blackboard system, since it gives increased opportunities for figuring for place. FOREST AND STREAM realizes that fact, but it also realizes that the blackboard system is the only safeguard shooters have to protect them from the mistakes of inexperienced scorers. FOREST AND STREAM believes, however, that with a "Shooting Board" appointed by the National Association of Trap-Shooters, and vested with powers similar to those of the "Racing Board" of the L. A. W. (referred to in this issue by "National League"), dropping for place will be reduced to a minimum. Thus the bugaboo of the blackboard system would be rolled in the dust.

### Listen to what "Old Hoss" Says.

PITTSBURGH, Pa., Dec. 12.—*Editor Forest and Stream:* I am more than delighted with the editorial and the sentiments and suggestions that it contains. Let us have a national trap-shooters' association by all means, or something of the kind, some body or council with authority to suspend, disbar or expell all crooks, or fake shooters of any kind.

The editorial has come in the nick of time and FOREST AND STREAM is the paper to push the subject to a successful issue. You have the occasion now; do not hesitate, but go ahead, and I am sure it will be successful. You will gain the friendship and admiration of fifty gentlemen sportsmen for every crook that gets angry. FOREST AND STREAM can afford to speak out in no uncertain language, and now is the proper time. Trap-shooting is sport and pastime for gentlemen and it should be kept free from crookedness and gambling. Dropping for place is dishonest and no gentleman will do it. You have sounded the keynote of alarm. It is none too soon, and you will have all honest trap shooters with you. A man who will drop for place will steal your money if he gets a chance. Why not blacklist droppers?

Right here I want to say that the professional expert is not a "dropper," though he has lately been roasted rather severely, and unjustly as I think. The expert (good shot) is the drawing card at all tournaments, and he has done more to encourage and bring trap-shooting to its present popularity than any one else. "Protect the amateur" is the favorite cry now. As I look at it there are only two classes—poor shots and good shots. The good shots constitute about three-fifths of the shooters at all tournaments; they commence in the morning and shoot all day, and the expert generally has his hands full to win out even or a little ahead. The bad shots will shoot in a few events and then quit. The good shot is willing to pay a little for his pleasure but the amateur (bad shot) wants some money; now, the amateur (bad shot) has no more business in an open tournament at trap-shooting than an amateur has at boxing exhibitions, bicycle races, foot races or at any other amusement at which he is not capable of holding his own with his competitors. A mild handicap will do very well, but just as soon as you handicap the good shots to such an extent that they will be on a level with the bad shots, then it will be good bye to large tournaments. Such handicapping will amount to making the good shot waste his ammunition on impossible shots, and thus will be a miserable failure.

It is the good shots and not the bad shots that make our tournament a success. The amateur can have all the protection he wants by getting up and managing his own tournaments and barring the experts. But what kind of a success would such a tournament be? Really it is not the poor shot who is crying for protection so loudly; it is a few of the better shots, like "Doc," of Springfield, O., and as they are all chronic kickers they must not be taken into account at all. Of course the amateur is a necessity, for from his ranks come the experts; the expert, however, is a much greater necessity. Handicapping must be done at home or club shoots beyond a doubt; when all share alike the expenses of a club it is only fair that all should have an equal chance of winning. OLD HOSS.

### The Buckeye State Heard From.

MASILLON, Ohio, Dec 6.—*Editor Forest and Stream:* Your editorial in last week's FOREST AND STREAM, with reference to a governing power for trapshooting, it seems to me, strikes the proper chord and should merit the approval of all honest trapshooters. The rapid increase of shooters has created a demand for some definite authority upon which to base rules, and upon whom should rest the responsibility of giving to the lovers of trapshooting certain laws and conditions which will accrue to their benefit and place the sport upon a line with kindred sports of America. With such an organization, properly managed, it will not be long, I venture to predict, before tournaments and matches will become as popular with the general public as foot ball, cycling and baseball.

I am somewhat surprised that this subject has not been more fully discussed through the medium of the various sportsmen's journals, for I have heard it discussed times without number privately among shooters, and it seems to be considered that such an organization is sadly needed. Sometime since, I read in another journal an article from the pen of a New York gentleman upon this subject, which seemed to me at the time to be the most simple and sensible method of attaining this much desired end. I have not the article before me, but as I remember it, the plan submitted was to have the States wherein trapshooting leagues are already in existence, and States who have no such organizations, but have regular organized gun clubs, send delegates to a meeting at some central city and there organize a National trapshooters' league. This league to claim absolute jurisdiction over trap shooting in America, provide a constitution and by-laws, formulate and enact rules for the management of the organization and in fact attend to all matters which may come before the meeting. In the article referred to, the writer submits a plan of organization which is similar to that of the League of American Wheelmen, which, by the way, is the largest and strongest amateur organization in the world.

Now it seems to me that if the lovers of trapshooting, and especially those who so frequently howl against the present methods of running tournaments, classifying, etc., will only air their views through the columns of FOREST AND STREAM and discuss this question in a businesslike manner, and if the officers of the various State leagues or associations will bring the matter before their respective organizations, it will result in something tangible.

Your editorial has started the ball, but while all readers of your excellent paper will agree that your influence is great, they must also admit that you must have the support of men who are honest in their desire to see trapshooting elevated to the plane of a gentlemanly sport, and who are able and willing to lend their assistance in effecting that end. So come to the front gentlemen with your ideas and let there be a full and free discussion. In closing I desire to say that you deserve the thanks of all honest shooters for your able and fearless exposé of the recent digraceful Batsch-Morfey "match."

NATIONAL LEAGUE.

### Col. Anthony Suggests a Handicap.

CHARLOTTE, N. C., Dec. 8.—*Editor Forest and Stream:* I have read the editorial, and think the suggestion a good one as relates to a National Board of Control. There is no association that I know of which really needs such a board as much as trap-shooting. I have known of instances where I have been at tournaments this year of combinations of some of the best shots in the country who would stand together and never tie each other in an event, but by dropping in the various places call for a share of all the divisions. I have known men to openly caution each other on the shooting line not to tie, and as you justly remark, those who shoot at the trap for the sport of it, become disgusted at such conduct, and will ultimately retire from the sport if something is not done to obviate and put a stop to such trickery. I think this editorial in your commendable paper should meet with the hearty indorsement of every sportsman in the country.

I have discussed another subject at great length with representatives of several of the best gun clubs, and also some of the best representatives of sporting goods—gentlemen who are well posted, shoot well, and have the deepest interest in the promotion of trap-shooting. The subject is how best to equalize the shooting at tournaments, and whether or not something can be done to accomplish it. I have the concurrence of some good sportsmen that the following classification should be adopted and rigidly enforced. Most of the complaint aimed at experts from the masses attending trap-shooting recognize those who for the most part represent some of the various branches of the sporting goods lines, and as a general class they rank as the best in the tournaments. The complaint is that those fellows, although just as clever and gentlemanly as the very best, so far outclass the average sportsman that they get the lion's share of all the purses, and they argue that as they are paid all their expenses and are there for business to represent their goods, that all those who are experts should be handicapped against those who are not experts, and who have to defray every cent of expense incident upon their attendance.

Now, to obviate this complaint, and, I think, to place all upon an equal footing: I would say all known experts to be required to shoot at every tournament they attend from five expert traps, rapid-firing system; traps to be set known angles and not changed. All known 90 per cent. men should be required to go into this class whether they represent sporting goods or not. The next class should be the 85 per cent. men, who should be required to shoot known traps, unknown angles, and whenever they win first money in that class in an event in the next succeeding be advanced and required to shoot with the experts; failing to maintain himself there, he may return to his former class, but he must shoot with experts after winning first money before he can participate in the tournament any further. All those below 85 per cent are classed as amateurs and shoot known traps, known angles; those winning first and second money in any event to be advanced to the next grade and remain there until they fail to win a place, when they may return to their former class.

Those of the sporting goods representatives who are classed as experts and who desire to attend the tournaments for the purpose of displaying their goods and think the handicap too severe, can shoot for the targets in any class he may desire and thereby display his goods at the nominal cost of the targets, which his house pays for. I have the concurrence of some of the best sportsmen in the country that they regard the above as the most feasible way of equalizing the shooting and giving every class a fair show and almost universal satisfaction. I would be glad if you will, in connection with the other matter, discuss this proposition of mine, and by a combination of united effort let us see if we cannot promote in 1895 trap-shooting to a higher plane than it has ever occupied. J. T. ANTHONY.

### Mr. Dimick Heard From.

BOSTTON, Mass., Dec. 17.—*Editor Forest and Stream:* While I thoroughly agree with you in the criticism of a shooter who missed targets to accomplish a dishonest and unsportsmanlike purpose, I am inclined to be charitable in my judgment, as for the past fifteen years abuses have been practiced continually in trap-shooting, which, although very demoralizing to the pastime, have been generally accepted and adopted by the shooters as a matter of custom, without apparent consideration of right or wrong.

Men are too often influenced by examples of inferior character, and become thoughtless imitators. It is very difficult in these wonderful days to make the present generation halt long enough to intelligently appreciate what they are doing themselves, without asking consideration of the effect their acts may have upon others.

The necessity has long existed for an association such as you speak of, and nobody understands better than myself the difficulties which will arise in undertaking such an organization; but to say such a thing is impossible is cowardly. Attempts have been made which, for good and sufficient reasons not necessary to analyze here, have resulted in failure but now that the sportsmen fully realize the necessity and are willing to lend their co-operation and assistance, I do not question but that your attempt will meet with success, and result in the formation of an association by the gun clubs which will intelligently correct the abuses, remove the drawbacks, and in the future development of the sport, aid the natural tendency in the direction of true sportsmanship. C. W. DIMICK.

### Sancho Laments the Good Old Days.

PAWTEXET, R. I.—*Editor Forest and Stream:* Your editorial in last week's issue has the true ring and must find a response in the heart of every true lover of honest sport. In my humble opinion, however, there will always be more or less crookedness in trap-shooting as long as we have class shooting. This system, while it is supposed to favor the amateur, really offers a premium on dishonesty and poor shooting. It may be a necessary evil, but we used to have some very enjoyable little shoots in this small corner of "Yankee Land," before the clay pigeon and the coal tar birds were hatched; the satisfaction of winning with the best scores gave to the prizes won an added value. Trap-shooting is as dead here now as if the trap-shooters were all dead too, so it makes little difference to us. Still we enjoy reading FOREST AND STREAM to see what they are doing in other more favored sections. SANCHO.

### A Hearty Indorsement.

WILLIAMSPORT, Pa., Dec. 7.—*Editor Forest and Stream:* I have carefully perused your editorial in regard to crookedness of trap-shooters.

I heartily indorse the same; something should be done to protect the honest shooters (there are such and many of them); two or three crooked ones at a tournament will demoralize the whole crowd. While these two or three are watching for "holes" to drop into, it forces the others to do likewise or else get left. I am opposed to the blackboard system; it is an open invitation for crookedness; with its abolishment would come some improvement.

As regards forming a national trap-shooters' league, I believe it could be successfully accomplished, and that would be a great benefit to the clubs and shooters throughout our country.

N. A. HUGHES, Pres. Pa. S. S. A.

### Has Confidence in it.

WILMINGTON, Del., Dec. 12.—*Editor Forest and Stream:* I believe that an organization formed, as you suggest, with a competent judicial board composed of able-minded men, would be the best thing to promote that gentlemanly sport trap-shooting. It would no doubt help to break up the bad habits which are so prominent at this present day. You have my full support in this matter. BILDERBACK.

### Hamilton Gun Club's Programme.

THE Hamilton (Canada) Gun Club has recently issued the programme for its fifth annual tournament, to be held on Jan. 15, 16 and 17. The programme commences with the following information that will be read with interest by all who are thinking of visiting Hamilton in January next:

"Hamilton has now become the Monte Carlo of Canada. Being the only city situated near the American border, it affords greater facility for an international shooting tournament than possibly any other. We have endeavored in arranging this programme for our fifth annual tournament to make it the most pleasant and profitable to all ever given. The tournament will take place on the new grounds of the Hamilton Gun Club, situated inside of the inclosure of the Hamilton Jockey Club. Hotel accommodations may be had at either city hotels or at the grounds. Electric cars run from all parts of the city to the grounds. Pigeons will be shot from 5 ground traps, Hamilton Gun Club rules, each competitor to shoot 2 birds each round; targets shot from expert traps; no handicap, rapid firing system. All target events will be class shooting; live bird events, straight shooting. We have endeavored to make our international race one that will be satisfactory to all; Hamilton Gun Club rules will govern. The stake race is a novel idea of our own, which we hope will please the majority of shooters, and which we feel confident will become general at all such tournaments."

The first day's programme includes (besides target events) a live bird event in which $700 is guaranteed in 14 prizes as follows: 1st, $200; 2d, $100; 3d, $75; 4th, $60; 5th, $50; 6th, $40; 7th and 8th, $30; 9th, $25; 10th, 11th and 12th, $20; 13th and 14th, $15. The conditions of this race are 20 live birds. $10 entrance. It will be noticed that the introduction says: "live bird events, straight shooting."

The second day will see the continuation of the above event and the International team race, Canada versus the United States, 15 men teams, 15 live birds per man, $10 entrance; $30 added by the Hamilton Gun Club.

The third day includes the decision of what is called the "Grand Stake Race" at 15 birds, $15 entrance. The entrance it seems was payable in three monthly payments, beginning Nov. 10 and ending Jan. 10. A footnote adds: "This race closed with 30 entries." The following is the explanation of this race given in the programme: "This race may be new to some, and we shall endeavor to explain. Any person may pay his entrance on the dates mentioned above, and in event of his not being able to shoot himself, or in the event of his wishing to enter any person, he is at liberty to do so, providing he names his man on or before Jan. 15, 1895. A person failing to continue his payments will forfeit the moneys already paid. Dates of payment are Nov. 10, Dec. 10 and Jan. 10. The shooting in this event will be straight shooting at 15 live birds per man from 5 ground traps, H.G.C. rules, a man to shoot at 2 birds each round. Money will be divided: 30, 25, 20, 15 and 10 per cent." Target events are included in each day's programme. Shooting commences at 10 every morning.

The following piece of advice to American shooters is worth noting:

"Thinking it best that we should address a few words of instructions to American shooters regarding the entry of guns to be used at our shoot on January 15, 1895, we beg to say: It will save considerable confusion if you would consign your guns by express in bond (to avoid checking) at a fair valuation, from the point at which you enter Canada, to Harte & Lyne, Hamilton, Canada. We have arranged with the Government that you can, by so sending your gun, make a deposit with Harte & Lyne when you receive your gun from them here of 20 per cent of the valuation, which amount will be refunded to you on your returning the gun to them, to be sent across the line on your return home. This may look a little troublesome, but by following these instructions everything will go smooth. We will endeavor to make your stay with us, if you conclude to favor us with a visit, as pleasant as possible."

Programmes can undoubtedly be obtained by addressing the secretary of the gun club, J. W. Bowman, Hamilton, Can.

### Traps Had Been Tampered With.

SYRACUSE, N. Y., Dec. 7.—A large delegation of the Onondaga County Sportsmen's Club went down to Maple Bay yesterday to hold their semi-monthly medal shoot. On their arrival at the club's ground it was discovered that the traps had been tampered with to such an extent that it was late in the afternoon before a target could be thrown. It was then too late for the medal shoot, so some of the members present shot at 50 targets for practice. Among those who were present but who did not shoot were "Uncle Dan" Lefever, Jas. Montgomery, Boyd and Harry Ayling. The scores made by the others were as follows:

Practice shoot, 50 targets, unknown angles:

| | |
|---|---|
| W Morris | 11011011111111111011111011111111111—44 |

### Flushing Shooting Club.

FLUSHING, L. I. Dec. 15.—The scores given below were made this afternoon on our grounds near the Murray Hill station. The day was clear with quite a strong breeze blowing, while the birds were good fast flyers. Scores:

No 1. second contest for club championship, 10 birds, club handicap:

| | | | |
|---|---|---|---|
| G B Mickle (25yds.) | 2000122211—7 | C Hance (28) | 1012000120—5 |

WM. T. WILCOX, Sec'y.

### Morfey Takes the First.

ALTOONA, Pa., Dec. 17.—*Special to Forest and Stream:* T. W. Morfey of Paterson, N. J., won the first of the series of three 100-bird races arranged with W. G. Clark of this city. The weather was cold and stormy with a good wind from the west. Birds were a fair lot but the luck of the birds was all against Clark, who shot an uphill race all the way, losing 6 out of his first 25. He then settled down and scored 68 out of the next 75. Morfey shot a great gait, scoring 95, beating his opponent by 9 birds. Largest run was 30 made by Clark, Morfey's highest run was 23 straight. Elmer E. Shaner of Pittsburgh was referee.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

The South Side Gun Club's New Year's Day shoot has been a popular fixture for the past 14 years, and the fifteenth annual tournament of that club set for Jan. 1. 1895. promises to be no exception to the general rule. The secretary, W. R. Hobart, is getting out a programme that ought to fetch the boys, as no one knows better than Billy what those same boys enjoy.

Conny Furgueson, 3d, and C. A. Sykes, secretary of the New Utrecht Gun Club, Woodlawn, L. I., are now tied for that club's prize with 9 shoots each and a score of 85 kills. To qualify, they must each shoot one more string of 10 birds; this they will do at the next club shoot. T. W Morfey, who has shot at 10 birds has 94 kills to his credit. Conny's handicap allows him one miss as a kill and one miss as a no bird. As he is doing some great shooting now, he will give Secretary Sykes a hard race to beat him out.

New London, Conn., Dec. 17.—The Standard Keystone Target Co., of this city, was totally destroyed by fire on Saturday night The loss is stated to amount to $20,000, of which one-half is covered by insurance.

Targets on Thursday, Dec. 20, and live birds on Friday, Dec. 21, is the programme at Elizabeth, N. J., this week.

The next contest for the New Utrecht Gun Club's holiday cup will be held on Christmas Day at the club's grounds, Woodlawn, L. I. The fourth contest for the E. C. powder cup will take place the following Saturday, Dec. 29.

A fifty-bird race, 30yds. rise, between Charles Woolmington of Union Hill and T. T. Edgerton of Brooklyn, was shot on Tuesday, Dec. 11, on the grounds of the Union Hill Gun Club at North Bergen. The match was for $100 a side, Woolmington winning with the low score of 34, Edgerton scoring but 32.

The New Utrecht Gun Club held its annual meeting on Dec. 12, when the following officers were re-elected: Walter F. Sykes, President; Jeremiah Lott, Vice-President; Charles A. Sykes, Secretary and Treasurer. The report of the secretary shows the remarkable growth of the club during the past year and of its excellent financial standing. The membership now numbers eighty, and there is a balance on hand of over $67 in the treasury. Nearly $1,000 was spent in improving the club grounds both at Woodlawn and Bay Ridge, and the assets of the club amount to about $1,200, a low estimate, while the liabilities are not much over $300. Nearly 7,000 live birds were shot at by the club members at Woodlawn since July 1. Those present were Walter F. Sykes, Charles A. Sykes, David C. Bennett, Wm. Wynn, Garrett W. Cropsey, Robert R. Street, G. W. Coulston, Charles C. Bennett, Geo. E. Nostrand, A. A. Hegeman, Dr. Parker, W. Lair, P. A. E. Hogeman, Donly Deacon and G. Kattenstroth and Conny Furgueson.

The Keystone Shooting League, of Philadelphia, Pa., has issued the following cards to its members: "Philadelphia, Dec. 10.—Dear Sir: Mr. George Cohen, one of our members, has kindly donated a trophy to the League, to be shot for by members of the League. We expect to have it on exhibition at club house on Saturday, 15th inst., when there will be optional sweepstake shooting. It is the desire of the committee that all members that possibly can get out to the shoots between now and first of year, do so, as they wish to establish handicap shooting, so that all members will have equal chance to win this and other trophies that we are assured will be offered for members to contest for. If you have any friends that think of joining the League, if possible get their propositions in for the January meeting, as after the first of year all indications are that there will be very interesting shooting for members.—Property Committee, J. C. Shallcross, Sec'y." The second card runs as follows: "Philadelphia, Pa., Dec. 12.—Dear Sir: The members and friends of the Keystone Shooting League are cordially invited to participate in a good old-fashioned target shoot on Christmas Day. Each member will confer a favor by inviting all his friends. Three sets of traps will be used and all shooters can be accommodated. Events will be gotten up for those desiring to shoot sweepstakes and for those not desiring to shoot sweepstakes. There will be live birds on the grounds for those desiring to shoot them. The house is thoroughly heated, and everything will be done for the comfort of our guests. Loaded shells for sale on ground by superintendent. Trains leave Broad Street Station for Holmesburg Junction, P. R. R., at 12:01, 12:50, 1:50, 2:43 and 3:32, returning at 3:36, 4:25, 5:11, 5:54, 6:05 and 6:48. And leave Kensington Station, Front and Norris streets, at 12:10, 12:35, 2:50 and 4:30, returning at 3:10, 4:23, 5:08 and 6:30. Shooting will start on arrival of 12:50 train, Broad Street Station.—Property Committee, J. C. Shallcross, Sec'y."

The second shoot for the Flushing (L. I.) Shooting Club's Invitation cup takes place on Thursday next. Stages meet the trains at the Murray Hill station on the Long Island Railroad. Among the entries are C. M. Meyer and C. Furgueson, Jr., of the New Utrecht Gun Club.

Don't lose sight of the Newark City handicap, Jan. 24, Erb's ground, 25 live birds, $10 entrance, birds extra. The shoot is given under the auspices of the Newark Gun Club.

The third match in the Clark-Morfey series of 100-bird races comes off at Yardville, N. J., Charlie Zwirlein's grounds, on Friday, Dec. 21.

At the recent annual meeting of the Frankford Gun Club the following officers were elected to serve for the ensuing year: President, Geo. Stearn; Vice-President, Charles Schock; Secretary, E. Beck; Treasurer, H. Longhead; Trustees, C. Bourne and J. F. Crowther; Field Captain, E. Betson: Assistant Field Captain, H. Longhead; Official scorer, Frank Linzey. The club will hold a prize shoot for members only on New Year's Day.

Jack Brewer has backed himself to kill 46 of 50 birds at Frank Class grounds, Morristown Driving Park, N. J. Frank Class has backed the birds and will select his fastest; the stakes are $100 a side. The shoot takes place on Thursday, Dec. 20.

Paul North is in this city on business, and (inter alia) has brought East with him the new bluerock trap and electric pull attachment that his company will place on the market early in the coming year. There are several important changes in the make-up of the new bluerock trap, changes that have done away with whatever chance there was of finding fault with the expert trap now in use. A more extended notice of the new trap will be given in a week or so.

Somebody is after Brewer's scalp! In the Forest and Stream of Oct. 6 Capt. Brewer offers to shoot any man a race at 500 targets, unknown angles, for $250 a side. Northern New York has been heard from and Brewer can get a match whenever he wants one. A Rochester (N. Y.) shooter, to be more particular, is willing to cover Brewer's money as soon as the Captain is ready to put up. In view of the fact that Brewer is just now attending strictly to live birds, the man from Rochester (can it be Glover?) is willing to wait until Brewer gets through with Elliott and Carver.

In the brief account given of the scores made at the Townsend testimonial shoot on Dec. 6, an error crept in that should be rectified; empire targets and not bluerocks were used in every event at Marion, N. J., on that date.

The attention of all officials of gun clubs and game protection associations in the State of New Jersey is directed to the account of the convention held at New Brunswick, N. J., on Saturday, Dec. 15, which appears elsewhere in this issue.

Pittsburg is all right! "Old Hoss" has put himself on record as backing up Forest and Stream's scheme for the control of trapshooting.

Mr. C. C. Napier, representative of the firm of Hartley & Graham, 315 Broadway, New York, has just returned from a southern trip Mr. Napier says that he found the boys too busy shooting quail to pay any attention to targets.

Those New Englanders held their own in the Morristown (N. J.) handicap on Thursday, Dec. 13, didn't they? Leroy was a *tamale* hot enough for anybody that day.

Elmer E. Shaner, manager of the Interstate Manufacturers' and Dealers' Association, is in New York on business connected with the Association's career in '95. (Wonder if the Association won't accommodate us a little and chop a cubit or so off its title?)

C. A. Bogardus is anxious to shoot Dr. Carver a series of matches and doesn't seem to care much whether the matches are shot with a rifle, a shotgun or both.

Dr. Carver will spend the holidays at his home in Kansas City, returning to Chicago shortly after New Years Day. On his return to the Windy City he will shoot George Kleinman for the live bird championship medal recently won by Kleinman. This medal represents the live bird championship of the United States.

The Swan Lake Shooting Club held its annual meeting at the Grand Pacific Hotel on Monday evening, Dec. 19. The reports of the various officers showed the club to be in a flourishing condition. Officers for the ensuing year were elected as follows: E. W. Bangs, President; Wm. Nash, Vice President; S. R. Jewett, Secretary and Treasurer; G. H. High and D. M. Cummings, Directors. This club distinguished itself among shooting clubs last year by blackballing Gov. Altgeld. The reason that the club did so was because it considered that the Governor did not use his influence for the strict enforcement of the State game law.

A tournament at live birds and targets will be held at John Watson's grounds, Burnside Park, during Christmas week. Watson has gotten out an interesting programme which covers every day of the holiday week.

## CHICAGO AND THE WEST.

### The Present and Past in the Wilder West.

[*From a Staff Correspondent.*]

### ANACONDA, MONTANA.

Chicago, Ill., Oct. 24.—In my desk I have a large and beautiful photograph. It shows ten miles of rough and ragged mountain front, scarred with cañon and defile, and covered with scant forest growth. So lofty is this mountain that although it lies far in the background of the picture, it towers above and dominates the whole. Taking a general glance at this interesting bit of the Rockies, one might naturally call it a delectable place for game of the larger sort.

But alas! when I study my photograph closely I can see on the face of the nearer mountain slope the faint line of a wagon trail. Worse yet, I discover the gash in the face of the rocks here on the left of the main cañon to be the work of the hand of man, and not that of nature. The long white line running from it to the bottom of the cañon is not a series of fallen trees, but the long flume built by the diligent and avaricious hand of the human mining beaver. These lines leading down from the foot of the flume, and spreading out divergently upon the flat which lies below the nearer foothills are well beaten roads. And alas! again, and worst of all, here on the flat valley below the mountains, occupying half of my picture, there lies spread out in prim and mathematical exactness the streets and buildings of a well ordered modern city.

This is Anaconda, destined, so its inhabitants think, to be the capital of the State of Montana, and in their opinion the biggest little town on earth. A beautiful location it has and a beautiful little city it certainly is, showing in the picture as neat and trig as a flower garden, with its right-angled streets and compactly built business blocks. In the picture one cannot see the great smelters which are the foundation and support of Anaconda, and it is just as well one cannot, for nothing spoils the landscape more than a big and smoky smelter, and our mountain scene is spoiled sufficiently by even so clean and pretty a little city as this. I can see the great hotel, a credit to any city, and the substantial block in which is published the *Standard*, the greatest newspaper of Montana, and here is the big court house, and there the elaborate school building, and here are at least three churches, though there may be others whose spires I cannot find. In the background, there is the Past of the wilder West. In the foreground, more's the pity, occupying still more space, and showing not yet all that is to be, is the Present of that same West. The present of smelters, churches and schools.

When the sportsman of Anaconda wishes to go fishing, he boards the railroad and takes a journey. When he wishes to get a deer, he goes over the range. When he wishes to get a bear, he starts for some spot which you and I know as well as he. Alas and lack-a-day! and this is in the heart of the continental range of America.

I know the readers of Forest and Stream would a great deal rather read about Indians and bears and the killing of the same than listen to the chronicles of a tame trap-shooting town, but if I tell the truth about Anaconda I must declare the plain mud pie of commerce to be the chief object of those of sportsmanlike pursuit. I would rather say that fourteen lusty grizzly bears were killed in the edge of town during the past winter, and that the little red riding hoods need to be herded off the streets to keep them from the fangs of numerous ravening wolves; but all I can really say is that the Anaconda Gun Club in the year of '93 broke 37,000 targets and paid out $1,600 for live birds and inanimates. I may add also that the grounds of this flourishing organization are perfectly equipped and modern in every respect. The traps are covered, the pulls are of the latest sort, and there is a good shooting house which protects the shooter in either sun or rain. Anaconda, in short, and Anaconda shooting club, would offer the best facilities for a modern tournament at the traps.

If we are disgusted at finding bluerocks instead of bear, and pigeons instead of deer, we must at least be fair and admit the excellence of the rules and regulations of the Anaconda Rod and Gun Club. Under the system of this club the young shooter is rigidly protected, and the amateur is not left at the mercy of the shooter whose skill and experience give him an undue advantage. The shooting is done under a medal system of a very ingenious arrangement, there being two classes, A and B, and the entrance moneys are arranged so that the shooting is as cheap to each club member as possible. The success and popularity of the system adopted would seem to be fully evident by the shooting record of the club, mentioned above. There are very few trap clubs in the country which shoot 37,000 targets in a year, and there are few clubs where the interest of the membership is kept up so unflaggingly as in this one. The Anaconda clubmen shoot fifty-two weeks in the year, rain or shine, and when there are not many members present on the grounds, there are at least a few.

Dr. Rockefeller, at the time of my visit to Anaconda, appeared to be fairly entitled to the name of local champion, and in Mr. C. A. Tuttle I think I discovered the practical man of affairs, who in every community forms the center of the shooting interest. Mr. Tuttle's store is headquarters for the boys, and very good company, too, one may find there. Mr. Tuttle was elected the secretary of the Montana State Association, and being naturally a diligent and practical man was a wise choice for that responsible position.

At the time I saw the city, Anaconda in common with all Montana towns was suffering from the silver depression, but a pluckier and more hopeful body of citizens no town ever had even in the self-reliant and energetic West. Of one thing one may be sure, and that is that the visitor from the East, who comes within the gates of Anaconda, will have as hearty and genuine a welcome as he can get anywhere in the world. This feature of the West of the Past still remains in the West of the Present. For the stranger there are no latch strings and no locks on Anaconda doors, and I am prone to believe that it will be many, many years before the trait of sincere hospitality will vanish here as it long since has in the older cities of the world. One can only wish for the future of such a community the brightest and most roseate days, whether in matters of business or of sportsmanship. In the columns of Forest and Stream we will sometimes hear of Anaconda, and there also the Anaconda men will read of the doings of other portions of the world. Surely the purposes and accomplishments of a great sportsman's journal are of usefulness and beauty.

909 Security Building, Chicago. E. Hough.

### Trap at Closter, N. J.

Closter, N. J., Dec. 12.—Bill Linderman of this place had a couple of New York friends out here this morning with the intention of showing them how Bergen county Dutchmen can shoot quail. As luck would have it, the weather was altogether unpropitious for quail hunting, yet Bill managed to awake the echoes of the swamps with his 10-bore gun loaded with 4drs. of soft coal, one quail falling dead at the report. The New Yorkers with their nitro powder and feather-weight guns did better. During the afternoon the weather became warm, rain falling in torrents. An adjournment was made to the Closter Gun Club's house, where a few target races were shot for nominal stakes. The chief event was the team race between sides chosen by the two New Yorkers. Edwards's side was an easy winner by 8 targets. Greiff, Linderman and Edwards shot from two unknown traps, the balance from one trap, known angles; one man up was the rule, as the shooter had to stand in the door of the club house to be out of the wet. Scores:

| Greiff's Team. | | Edwards's Team. | |
|---|---|---|---|
| Greiff | 0111101111—8 | Edwards | 1011111101—8 |
| Eichler | 1101000000—3 | Linderman | 1101011100—6 |
| Van Valen | 000000w —0—11 | Van Sciver | 011111w —5—19 |

Matches at 5 pairs:

| | No. 1. | No. 2. |
|---|---|---|
| Edwards | 10 11 10 10 11—7 | 11 10 w — 3 |
| Greiff | 11 11 01 01 01—8 | 11 11 11 11 11—10 |

No. 3:

| | | | |
|---|---|---|---|
| Edwards | 11 11 11 11 11—10 | Greiff | 11 00 w — 2 |

Soft Coal.

### The Fathers Beat the Sons.

There was a good afternoon's amusement at the grounds of the New Utrecht Gun Club, Woodlawn, L. I, on Saturday, Dec. 15. The chief event was a match between C. Furgueson, Jr., and E Lohman on the one side, and their respective sons, Conny and Danny, on the other side. The race was a very close one at the finish, Lohman, Sr., going to pieces badly in his last 11 birds. As it was, the boys were beaten but one bird. A return match will be shot in the near future. Scores in the various events were as follows:

Match, Fathers vs. Sons, Fathers at 30yds., Sons at 26yds., 25 birds each:

| | |
|---|---|
| C Furgueson, Jr | 2122021221212211022221022—22 |
| E Lohman | 1111221•2002120010001200—14—36 |
| C Furgueson, 3d | 2222122220222022•202022•—19 |
| D Lohman | 011002•2202221222101•2002—16—35 |

Match, 15 live birds, 30yds. rise:

| | | | |
|---|---|---|---|
| Van Tassell | 020211012220102—10 | R R Street | 002211210101100— 9 |

Sweep, 10 live birds, $3, class shooting; club handicap:

| | | | |
|---|---|---|---|
| C Furgueson, 3d | 1222221222—10 | R R Street | 0022112101— 7 |

| C A Sykes | 2•10122111— 8 | E Lohman | 0220001000— 3 |

### Good Scores at Morristown.

Dec. 13 was in direct opposition to its predecessor, the day on which the "hog shoot" at Fanwood, N. J., was held. On that day it was dull and wet, yet by no means cold; on Dec. 13 it was dull and wild, with a chill nor'wester that made pigeon shooting at Frank Class's grounds, Morristown (N. J.) Driving Park, anything but warm work. It is true, there was hot company present, company warm enough for anybody; such names as J. A. R. Elliott, J. L. Brewer, Eddie Hill, T. W. Morfey, Frank Class, B. "Leroy," O. R. Dickey, F. Van Dyke, Milt Lindsley, "Dutchy" Smith, etc., tell the tale. The list shows that quality was by no means lacking. Among those who looked on at the shooting were C. W. Dimick, Lowell, Mass.; W. Fred Quimby, Neaf Apgar, T. H. Keller, Mrs. M. F. Lindsley ("Wanda") and others.

The first three events were 5-bird sweeps, with 8 entries in No. 1, Leroy and Dickey killing 8; No. 2 had 7 entries, half of whom killed all their birds; No. 3, with 7 entries, had five among their number who killed their string. In these three events 110 birds were shot at, 95 of which were scored, four others falling dead outside the flags. Next came Event No. 4, 8 birds, $5, with 11 entries, Morfey, Leroy and Class killing straight; five others scored 7, the remaining three killing 6 out of their 8. The combined score in this event was 77 out of 88, with 3 dead out of bounds.

The main event, No. 5, had 18 entries; it was at 15 birds, $15 entrance, 4 moneys, handicap rise. The handicapping was in charge of Mr. Jacob Pentz, who also acted as referee. Handicaps ranged from 26 to 32yds., Brewer and Elliott being placed on the 32yds. mark; this did not prevent Jim from killing all his birds in a quick, clean style. "Dutchy" on the 28yds. mark killed his 15 and received hearty congratulations on his precise work with that rheumatic south paw of his. "If it hadn't been for my rheumatism," said Dutchy, "perhaps I would have killed more!" As for the birds they were a good lot that were aided in no small degree by the strong wind that was blowing from the score to the traps. Altogether 462 birds were trapped during the day; 379 of them were scored, in addition to which 20 fell dead out of bounds. The best work of the day was unquestionably that done by B. "Leroy" Woodward, of Brockton, Mass., one of the latest converts to nitro powder. Leroy's total for the day was 36 out of 38, his two lost birds being dead out of bounds; he ran 27 straight before he missed; T. W. Morfey killed 23 straight, all he shot at; Jim Elliott scored 22 out of 23, one dead out of bounds being scored against him

The following are the scores:

| Five birds, $3: | No. 1. | No. 2. | No. 3. |
|---|---|---|---|
| Timmons | 11201—4 | 21011—4 | 21112—5 |

### Ward's Record for '94.

Columbus, O.—The Sherman Rod and Gun Club recently brought its season to a close with its thirtieth weekly shoot, at which five members contested for the club badges. Pansy won the Class A medal, Duncan taking first honors in Class B.

The table given below shows the work of nineteen members who took part in the weekly shoots of this club. Ward's average is a great one, when it is taken into account that his 400 targets were shot in strings of 25, unknown angles, on no less than sixteen different occasions. The average of 93 makes Mr. Ward captain of the club for the coming season. His record in the badge contests is only a part of his work at the traps. Since January of this year he has shot at exactly 2,820 targets, scoring 2,620, his general average being thus equal to that made in the badge contests—viz., 93 per cent.:

| Rank. | Name. | Shoots attended. | Times won badge. | Targets shot at. | Targets broken. | Aver'ge Per Ct. |
|---|---|---|---|---|---|---|
| 1 | Ward | 16 | 8 | 400 | 372 | 93 |
| 2 | Alkire | 2 | 0 | 50 | 46 | 92 |
| 3 | Walt | 19 | 7 | 475 | 428 | 90.1 |
| 4 | Barton | 2 | 0 | 50 | 44 | 88 |
| 5 | Porterfield | 7 | 1 | 175 | 147 | 84 |
| 6 | French | 15 | 7 | 375 | 313 | 83.4 |
| 7 | Greene | 7 | 0 | 175 | 135 | 77.1 |
| 8 | Mill | 28 | 4 | 700 | 534 | 76.3 |
| 9 | Sprigg | 8 | 1 | 200 | 151 | 75.5 |
| 10 | Fink | 21 | 1 | 525 | 393 | 74.8 |
| 11 | Henry | 6 | 0 | 150 | 110 | 73.3 |

| 14 | Blake | 21 | 0 | 525 | 367 | 70 |
| 15 | Nichol | 7 | 0 | 175 | 122 | 69.6 |
| 16 | Corrodi | 5 | 0 | 125 | 80 | 65.6 |
| 17 | Pansy | 24 | 1 | 600 | 350 | 59 |
| 18 | Hoover | 7 | 0 | 175 | 100 | 58.8 |
| 19 | Lone | 9 | 0 | 225 | 120 | 56 |

### Shooting at Larchmont.

There were only 6 entries for the Larchmont Club's $100 silver trophy on Saturday last, Dec. 15. The cup was won by L. T. "Davenport" after a tie with George Work. J. P. Knapp on the 30yds. mark did some capital shooting during the day, scoring 74 out of 81 shot at. Scores:

Handicap sweep, 25 birds, $25 entrance, for silver trophy valued at $100:

| | |
|---|---|
| L T Davenport (30) | 1212220212222221122222222—24 |

| F G Moore (30) | 211212122—9 | 21112• — 5 | |
| Capt Money (30) | 220 —2 | 21221200 — 7 | |
| L T Davenport (30) | 0 —0 | 22121• — 5 | |

Ties were shot off in another sweep similar to Nos. 4 and 5, which was won by George Work with 15 straight; Fred. Hoey second, 14, Knapp 13, and Capt. Money 12. During the day a sweepstake with four entries was shot under the following conditions: Star sweepstake, 6 birds, $10 entrance, with privilege of re-entry; $1 in rounds 1 and 2; $2 in rounds 3 and 4; $3 in rounds 5 and 6; after that miss and out. This was won by Fred. Hoey with 10 straight.

### Newark Gun Club.

Dec. 13.—The following are the scores made at the Newark Gun Club shoot held at Erb's grounds this afternoon:

Club shoot, 10 live birds:

| | | | |
|---|---|---|---|
| Castle | 1011111110— 8 | Klein | 1121121001— 8 |
| Breintnall | 1022212120— 8 | Erb | 0111101211— 8 |
| Walters | 2212221121—10 | Erb | 2021101111— 8 |
| Young | 2002002100— 4 | | |

Other events were as follows: No. 1, 4 birds, $3; No. 2, 7 birds, $5; No. 3, miss and out, $1:

| | No. 1. | No. 2. | No. 3. |

| Erb | ..... | 1100011—4 | ..... |
| McGraw | ..... | ..... | 0 —0 |

## The Bloomsburg Tournament.

Bloomsburg, Pa., Dec. 11.—The following are the scores made on the grounds of the Bloomsburg Gun Club at their third annual tournament, held on Dec. 4 and 5. The grounds are situated on the left bank of the Susquehanna River, upon land which is part of the estate of the late D. J. Walters, Esq., directly south of the beautiful town of Bloomsburg. The visitors present included the always welcome Fred Quimby, Van Dyke and Hobart from New York, N. A. Hughes from Williamsport, Bonham and Hess from Fairmount Springs, Messrs. Millen and Cooper from Mahanoy City, Ely from Dorencetown, Pettibone from Wyoming, Clayton from Luzerne, Stroh from Pittston, Harman and Yetter from Catawissa, Hawk from Nescopeck, Doan from Berwick, and Baldwin from Elmira. We had as good weather as could be expected, and had one-half of the shooters arrived who had promised to come, we would have had a more than successful shoot. As it was, it was a success financially for the club, and we hail the day when we can again have our friends with us under more favorable circumstances. Empire targets were used, and they were the most satisfactory of any that we have every shot at. Scores:

No. 1, 10 live birds, medal and sweep, entrance $8:

| | | | |
|---|---|---|---|
| C Hagenbuch | 22212012•2— 8 | W Hawk | 2•12002101— 6 |
| W K Armstrong | 2•02210102— 6 | R Clayton | 0221022010— 6 |
| Dr Bonham | 1222020210— 7 | C P Armstrong | 0020220010— 4 |
| W G Yetter | 1220222120— 8 | F Quimby | 1221102020— 7 |
| J H Mercer | 2221201011— 8 | Van Dyke | 222220•200— 6 |
| W Eger | 0212032101— 7 | Hughes | 2122211112—10 |
| *E Yocume | 1111220212— 9 | Hobart | •121222011— 8 |
| T Ely | 221121•111— 9 | Bob White | 1001100210— 5 |

*Won medal for second time.

| Hagenbuch | 20202—3 | 0•1—1 | Cooper | ..... | 120—2 |
| Stroh | 21122—5 | 120—2 | | | |

No. 8 was a miss and out with 5 entries at $2; the purse was divided between Stroh and Hagenbach with three kills each.

*Second Day.*

This was target day, and the boys smashed the empires with great regularity. Van Dyke's work with his Winchester places him away up in the ranks as a target shot. Scores:

No. 1, 10 empires, $1: Quimby 7, Hobart 8, Van Dyke 10, Bonham 9, Hawk 6, Hagenbuch 7, Stroh 7, McMillian 8, Cooper 8, Mercer 3, Doan 7, Hughes 8.

No. 2, 15 empires, $1.50:

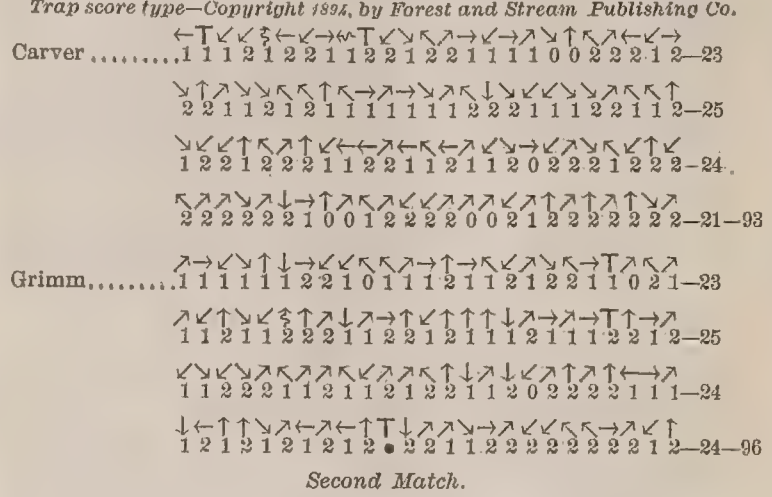
J. H. M.

## "Trap-Shooter's Ready Reckoner."

There has just come from the Forest and Stream press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

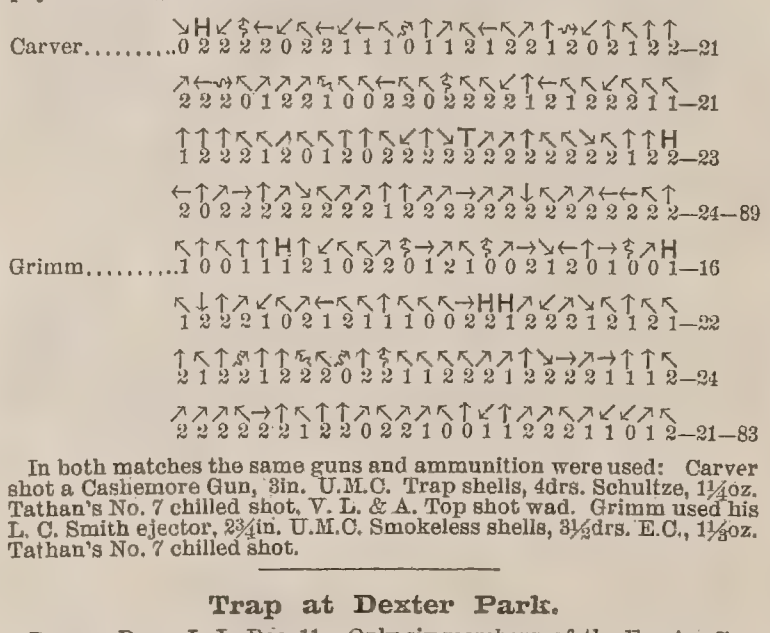


## Grimm vs. Carver.

Chicago, Ill., Dec. 13.—The scores made in yesterday's and to-day's matches between Grimm and Carver are given in detail below. Originally these matches were set for Monday and Tuesday, Dec. 10 and 11, but Grimm was taken sick on Saturday and had to remain in bed all Sunday and Monday, a physician being in attendance. This illness may possibly account in some measure for his poor score in the second race.

The first race was shot under a dull, overcast sky, a strong northwest wind blowing at the time. The birds were a selected lot, but owing to John Watson not having received word of the match until late the evening before, the birds had been fed and were consequently sluggish flyers. In this race Carver had slightly the best of the birds. A glance at the scores of this match shows that from the 23d up to the 83d the score was even, each man missing his 68th bird. Carver's high run was 47 straight, Grimm's 41; the latter killed 75 out of his 77 birds. Score:

First match, Carver vs. Grimm, 100 birds, $100 a side, each to pay for his own birds:



*Trap score type—Copyright 1894, by Forest and Stream Publishing Co.*

*Second Match.*

The second match, which was shot this afternoon, produced an excellent lot of pigeons, only one bird requiring to be flushed. While the first 25 were being shot at, the sky was overcast; then the clouds rolled by and the balance of the day was perfect. The wind which was W.S.W., was very light, helping the birds but little. The birds were a very even lot; the luck being equally divided between the contestants, although Carver had some very poor luck in regard to "dead out of bounds." (Note. In the score given below, there is nothing to show the birds which were dead out of bounds.) Score:

Second match, Carver versus Grimm, 100 birds, $100 a side, each to pay for his own birds:

In both matches the same guns and ammunition were used: Carver shot a Cashemore Gun, 3in. U.M.C. Trap shells, 4drs. Schultze, 1¼oz. Tathan's No. 7 chilled shot, V. L. & A. Top shot wad. Grimm used his L. C. Smith ejector, 2¾in. U.M.C. Smokeless shells, 3½drs. E.C., 1¼oz. Tathan's No. 7 chilled shot.

## Trap at Dexter Park.

Dexter Park, L. I., Dec. 11.—Only six members of the Empire Gun Club were present yesterday afternoon to take part in the club shoot at 7 live birds. Henry Knebel, J., on the 28yds. mark was the winner. The following are the scores:

No. 1, club shoot, 7 birds, handicap rise, modified Hurlingham rules:

| | | | |
|---|---|---|---|
| H Knebel, Jr (28) | 1112111—7 | H Smith (23) | 0111001—4 |
| R Colgan (23) | •101111—5 | W Roberts (26) | 1020100—3 |
| P Malone (28) | 0201011—4 | H Mahlstedt (27) | 0000210—2 |

No. 3, 2 birds, ties miss and out; No. 3, 6 birds:

| | No. 2. | No. 3. | | No. 2. | No. 3. |
|---|---|---|---|---|---|
| Malone | 211 211—6 | ..... | Mahlstedt | 221 20 —4 | ..... |
| Roberts | 211 210—5 | 122220—5 | Colgate | 001 —1 | 110011—4 |

*Dec. 12.*—The Parkway Rod and Gun Club held its regular shoot this afternoon at Dexter Park, L. I., notwithstanding the driving rain whicd made pigeon shooting far from a ploasurable task. The match for the club badge had 12 entries, 6 in Class A, 4 in Class B and 2 in Class C. Bookman, of Class C won the badge after a struggle with Van Wicklen, a Class B shot. The following are the scores:

Club badge shoot, 7 birds, class handicaps:

Class A.

| | | | |
|---|---|---|---|
| A Botty (30) | 2212102—6 | H Bramwell (28) | 0111111—6 |
| J Bennett (28) | 1110111—6 | C C Wissell (28) | 211•111—6 |
| L Helgans (28) | 2120122—6 | T T Edgerton (28) | 2•21222—6 |

Class B.

| | | | |
|---|---|---|---|
| D S Van Wicklen (26) | 2221221—7 | J Wooley (25) | 2221102—6 |
| T Short (26) | 1021112—6 | A Brower (25) | 1222202—6 |

Class C.

| | | | |
|---|---|---|---|
| *H J Bookman (25) | 1122221—6 | H J Selover (25) | 1120201—5 |

* On the shoot off for the badge, miss and out, Bookman won on the third round, Van Wicklen failing to kill his bird.

Sweep, 3 birds, class shooting, ties miss and out:

| | | | | | | |
|---|---|---|---|---|---|---|
| Van Wicklin | 221 | 22 | —5 | Botty | 201 | 12220 —6 |
| Brower | 212 | 21 | —5 | Bramwell | 102 | 0 —2 |
| Helgans | 121 | 20 | —4 | Bookman | 201 | 0 —2 |
| Wissell | 121 | 0 | —3 | Dennett | 002 | —1 |
| Wooley | 110 | 211221—8 | | Edgerton | 020 | —1 |
| Selover | 012 | 212220—7 | | | | |

*Dec. 13.*—The Unknown Gun Club held its last shoot for the season of 1894 at Dexter Park, L. I., on Thursday, Dec. 13. At the conclusion of the shoot Isaac Hyde was presented with the championship badge for 1894, he having made the highest average during the year. In order to qualify for this prize a member must compete in seven out of the twelve monthly shoots at 7 live birds per man. Hyde qualified by taking part in seven shoots, killing 47 out of 49 shot at, an average of nearly 96 per cent. The result in to-day's shoot was as follows:

Club shoot, 7 birds, handicap rise:

| | | | |
|---|---|---|---|
| I Hyde (30) | 2122122—7 | Gus Rankin (23) | 1021220—5 |
| John Bohling (25) | 2122111—7 | John Flynn (28) | 2002201—4 |
| E A Vroome (30) | 0111221—6 | J F C Elfers (25) | 0110120—4 |
| John Akhurst (25) | 1211202—6 | H Von Staden (25) | 0022102 —4 |
| Moses Brown (28) | 0212101—5 | | |

*Dec. 14.*—The Idle Hour Gun Club held its shoot here this afternoon. Henry Boemmerman won the badge with a score of 6 out of 7, one dead out of bounds. After the club race a 3-bird sweep was shot off, with 7 entries; Boemmerman, Lakeman and Bamberger divided with 3 kills each. Score in club shoot was as follows:

Club shoot, 7 live birds:

| | | | |
|---|---|---|---|
| H Boemmerman | 21111•1—6 | J F C Elfers | 1011010—4 |
| J Bamberger | 1110110—5 | C Lakeman | 0110022—4 |
| H Meyer | 2111100—5 | H Hoffman | 01•0110—3 |
| C Coors | 0111021—5 | H Huckfield | 0010001—2 |

## Emeralds and Tarheels.

At Eden, N. C., a new gun club has been organized under the presidency of Dr. G. V. Hudson, secretary of the Emerald Gun Club, of New York city. The other officers are: M. F. Briles, Eden, First Vice-President; G. H. Low, Thomasville, Recording Secretary; Erastus H. Dorsett, Eden, Treasurer. On Dec. 11 a shoot, the initial one of the newly organized club, was held on the club grounds. The shoot was at 10 live birds, Dr. Hudson winning with a clean score; G. H. Low was second with 9; R. Regan, president of the Emerald Gun Club, of New York, and E. H. Dorsett, were third with 8 kills; Briles and Hoover killed 6, Thomas 5 and Dorsett 4. After the shoot the club members sat down to dine off a 20lbs. gobbler, killed by Mr. J. M. Dorsett, on Sheppard Mountain. Among those present at the dinner were Squire A. Finch, Senator Philips, John Hicks, Monroe Williams, James Parrish, R. L. Hoover, A. R. Kerns, A. Pierce, David Thomas, Scott Myers, Jeff. Myers, Ed. Andrews and others.

## The Climax Handicap.

A good many inquiries are received from month to month as to the different methods of handicapping adopted by clubs. The general idea seems to be to equalize as nearly as possible the chances of the expert and of the amateur for the club's annual prizes. The Climax Club, with headquarters at Fanwood, N. J., has always found the following method of handicapping decidedly popular with its members, there being always a good attendance at its club shoots:

All club contests are at 25 targets per man. The handicap committee allows all experts or best shots in the club to shoot at 25 targets only, and these are known as scratch men. The other members of the club are allowed to shoot at one or more additional targets according to their recognized ability. The handicap, or the number of targets allowed by the handicap committee, holds good for one year. For each target a shooter scores, of 20 or over, he is allowed one point, but can get no more than six points at any one shoot, regardless of how many he scores above 25. A shooter to be eligible to prizes offered must participate in a majority of club shoots during the year, and prizes are awarded according to the aggregate number of points each shooter has gained in all the shoots he has attended. This assures a good attendance at the shoots and creates a revenue for the club. The following scores made at a handicap shoot recently is a good example of how the handicap works.

Club shoot, empire targets, known trap, unknown angles:

| | Allowance. | Shot at. | Broke. | Points Scored. |
|---|---|---|---|---|
| Keller | Scratch | 25 | 23 | 4 |
| Brantingham | " | 25 | 24 | 5 |
| Smith | " | 25 | 22 | 3 |
| Apgar | " | 25 | 23 | 4 |
| D Terry | 2 | 27 | 24 | 5 |
| D Darby | 5 | 30 | 26 | 6 |
| Manning | 4 | 29 | 22 | 3 |
| Goodman | 5 | 30 | 19 | 0 |
| Scott | 3 | 28 | 20 | 1 |
| Zeglio | 8 | 33 | 25 | 6 |
| Squires | 5 | 30 | 26 | 6 |
| Swody | 10 | 35 | 25 | 6 |
| W Terry | 5 | 30 | 23 | 4 |

## Syracuse Gun Club Medals.

At a recent meeting of the Syracuse Gun Club it was decided to buy three handsome gold medals, to be shot for by the members. The shooters are divided into three classes, A, B and C; in each class the shooters are brought as near together as possible by a handicap allowance of targets. The medal for each class has to be won six times before it becomes the property of any shooter in that class. The limit men in each class shoot at 50 targets, those who are more expert in the use of the gun are docked anywhere from 2 to 5 targets, scratch men shooting at 45 targets. The following is a list of the men in the different classes, together with the handicaps:

Class A.

| | Shoots at | | Shoots at |
|---|---|---|---|
| C F Ayling | 46 targets | D M Lefever | 50 targets |
| C L Becker | 50 " | G H Mann | 47 " |
| A G Courtney | 45 " | H McMurchy | 45 " |
| A C Ginty | 50 " | C H Mowry | 45 " |

| E McMurchy | 50 " | L W Mantz | 50 " |
| Wm Nottingham | 50 " | M G Rood | 50 " |
| E E Slamen | 50 " | | |

## Elliott and Brewer After Pork.

Fanwood, N. J., Dec. 12.—Although it rained hard nearly all day, thirteen shooters put their names down on the list and paid the $7 which entitled them to shoot for "Dutchy's" 300lbs. hogs. The conditions were as follows: Ten birds, $7; ten entries pay for the hogs; all over that number, surplus money divided 60 and 40 per cent.; class shooting; first money, the biggest hog; second money, the other hog; third money, 60 per cent. of surplus; fourth money, 40 per cent. of surplus. Six shooters, among that number being Elliott and Brewer, tied for the first hog; as there was not enough to go round they sold out to John Benner, proprietor of the Fanwood Road House, for a certain sum of money, which they divided among themselves. "Dutchy," Milt Lindsley and Morfey tied for the second hog, the two former selling out to Morfey. Woodruff and Keller divided third money, Benner and Astfalk taking fourth money. W. Fred Quimby acted as referee, filling the thankless position in an entirely satisfactory manner. Scores:

Hog shoot, 10 birds, $7:

| | | | |
|---|---|---|---|
| J A R Elliott | 2122212222—10 | Dutchy | 2•21222112— 9 |
| J L Brewer | 2221231212—10 | M F Lindsley | 2012222122— 9 |
| C Zwirlein | 2211112211—10 | A Woodruff | 1202022222— 8 |
| F Van Dyke | 2221122212—10 | T H Keller | 1221•2221•— 8 |
| Neaf Apgar | 1211222211—10 | J Benner | 1•202022•2— 7 |
| Lamont | 2212221122—10 | N Astfalk | 0122022022— 7 |
| T W Morfey | 2222•22222— 9 | | |

## Weir City, Kansas.

Weir City, Kan., Dec. 15.—Inclosed are the scores made in the medal contest of the Business Men's Gun Club. The work of the handicap committee was better than the shooting of the club members, as results show a very close and interesting race for the trophies, with scores averaging unusually low. The day was very pleasant, and the only excuse for such a preponderance of low scores lies in the fact that several of the best shooters were unable to be present. Scores:

Medal contest, 25 singles, handicap allowance:

| | |
|---|---|
| King (allowed 5) | 1100101101110010000011011—18 |
| Abbott (5) | 0000010011101101100111100—17 |
| Histed (5) | 0110110111100110010110101—20 |
| Sowers (2) | 0011110100111010000100000—13 |
| McIlhany (scratch) | 1111111111100111111111111—23 |
| Beadle (10) | 1000111101001101101111000—23 |
| Holmes (2) | 1110010010011001111010111—17 |
| Morrison (5) | 0111000100011100111011011—19 |
| Merriam (15) | 0100000100010010001011000—22 |
| Kirk (5) | 0100001100000111001011100—15 |
| Hamilton (5) | 0100101101101111001100110—20 |

McIlhany and Beadle tied for first gold medal. In shoot-off McIlhany allowed Beadle 4 birds in 10, and Beadle won by score of 10 to 9.

McIlhany (scratch)..1111101111— 9 Beadle (4).....1001101110—10

Merriam won second gold medal.

Mamaluke.

# Answers to Correspondents.

### No notice taken of anonymous communications.

J. V. C., Chicago.—1. In what part of the United States would Asiatic or African antelope be likely to thrive the best confined in an ample-sized park? 2. Where is the fur called Astrakan obtained, and from what animal? 3. Is the fur called Persian lamb Persian lamb in reality, or name only? 4. Would the Russian sable be likely to thrive in this country if introduced into say the Yellowstone Park. About what is the value of their skins? Ans. 1. On the plains of the Southwest, Texas or Indian Territory, we should imagine. 2. Astrakan is sheep skin specially treated. 3. So is Persian lamb. 4. Yes. From $25 to $200.

## Smooth Running Pencils.

It is a pleasure to use Dixon's American Graphite lead pencils. They glide over the paper with never a grit, and leave in their wake a plain and uniform impression. They do not break at critical periods without due provocation, and they are about as near perfection as American brains and experience can make them. If you do not already use them write for particulars to the Joseph Dixon Crucible Co., Jersey City, N. J.—*Adv.*

# FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, DECEMBER 29, 1894. | VOL. XLIII.—No. 26 No. 318 BROADWAY, NEW YORK.

*For Prospectus and Advertising Rates see Page* iii.

**The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.**

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14x19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**
**Price of the pictures alone, $1.50 each; $5 for the set.**

Remit by express money order or postal money order Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

## THE MINNESOTA SYSTEM.

AN EXAMPLE OF PRACTICAL GAME PROTECTION.

THE system of game protection which has been devised and put into practice in Minnesota is so admirable in conception and so effective in operation that it may be studied with profit by those who are concerned with developing and perfecting the protective machinery elsewhere.

The cause of conserving the game and fish supply is one which in each State presents difficulties peculiar to the conditions there obtaining. In Minnesota the most perplexing problem was to check the wholesale killing of game and fish for market, for market-hunting was recognized as the agency that was destroying the deer and the grouse. The solution of this problem was the task to which Minnesota sportsmen addressed themselves, and it is interesting to note that here, as is usually the case, the results gained both in the provision of an adequate law and in its subsequent enforcement have been for the most part the achievement of one man. The Minnesota statute may be said to have grown out of the experience, the enthusiasm, the devotion and the sagacity of Commissioner W. P. Andrus, the Executive Agent of the Game and Fish Commission. Always alive to the work of protection, Mr. Andrus organized the Minnesota Game and Fish Protective Association, and for a long time was its secretary and executive officer. The organization was purely voluntary, being composed of the sportsmen of Minnesota, and including among its members some of the most prominent State officials. It was supported by contributions from the members, but the moving spirits soon found that an organization of this sort without the support of the State Government in its endeavors to enforce the laws that were then upon the statute books was unsatisfactory, and that the results obtained were not commensurate with the outlay or the work. The courts would not act in harmony with such a movement. In this exigency Mr. Andrus was entrusted with the responsibility of framing a law which from his experience would be applicable to the condition of affairs then existing in the State. The law then enacted, in 1891, originated the present Game and Fish Commission of Minnesota. Wm. R. Merriam, who was then Governor and who had worked with Mr. Andrus in the common cause, made a well-merited recognition of his efforts and services by giving him the first appointment as one of the new Commissioners. From the outset Mr. Andrus became the leading spirit and the most active member of the board. He was elected as its treasurer and executive officer, and to him was entrusted by the other members the execution of the law. The board very quickly realized, however, that the statute under which they were working was not effective nor precisely suited to the new conditions; and Commissioner Andrus in concert with the counsel of the board, Mr. Bramhall, drafted a new measure, in which were embodied the practical experience of the executive agent and the legal acumen of the attorney. The bill was a product of long and careful study, and that good work was done in its preparation has been amply attested by the fact that although the statute embodied certain radical principles never before incorporated in a game law, it has been upheld by the Supreme Court as constitutional and binding.

The novel features of the statute have already been outlined in these columns. In the first place, as a sure groundwork for the law, full control of the game and the fish is assumed and they are declared to be the property of Minnesota:

No person shall at any time or in any manner acquire any property in or subject to his dominion or control any of the birds, animals or fish within this State, of the kinds herein mentioned, but they shall always and under all circumstances and conditions be and remain the sole property of this State.

This proprietorship and control are not surrendered, even after the game has been captured; the statute yields to the citizen only the privilege of using the game in certain clearly defined ways, but no other:

By killing, catching or taking the same, however, in the manner and for the purposes herein authorized, and during the periods when their killing is not herein prohibited, the same may be used at the time, in the manner and for the purposes herein expressly authorized, but not otherwise.

The law then prescribes certain seasons in which and methods by which the game may be taken and may be had in possession; limits the amount one person may take; and specifies particularly that it may be taken only for use within the State. The right acquired by the individual, it is thus seen, is of limited nature; he may never have an absolute, unrestricted property in venison or grouse or trout, even after he may have killed them.

This assumption of sole right, title and control in the fish and game is the basis of the Minnesota law. Upon it rests authority for the exceedingly stringent regulations respecting possession, transportation and sale. In brief, these regulations are, as to certain species of game and fish,

1. No one shall take them with intent to ship beyond the limits of the State.

2. No one shall ship them or intentionally allow, or aid in, their shipment out of the State.

3. No one shall have in possession game or fish unlawfully killed in another State or which has been shipped thence unlawfully.

4. Possession of game or fish is made *prima facie* evidence that it was killed in Minnesota.

5. If it shall appear that the game or fish in possession was killed outside of Minnesota, this shall be *prima facie* evidence that it was there killed unlawfully or shipped thence unlawfully, and that its possession is therefore a violation of prohibition 3, and this may be overcome only by direct and positive evidence to the contrary.

6. It is made the duty of every person to whom game may be offered for export to notify the board of commissioners or the game wardens, and to give them full particulars respecting the shipment.

7. It is made the duty of commissioners, wardens, sheriffs, constables and police officers to seize fish or game unlawfully possessed or shipped. Ample provision is made for the issue of search warrants by the courts of jurisdiction.

When the full meaning of these provisions is reflected upon it will be recognized that we have here a law which lays a strong hand upon the market-hunter, the common carrier and the game dealer. The statute is one of extreme stringency. When it was adopted in 1893 there were grave doubts as to whether the courts would uphold it. But the results of the test suits brought in the Supreme Court have triumphantly demonstrated the impregnability of those very sections for which fear was entertained, and have vindicated the wisdom of Messrs. Andrus and Bramhall, who framed them.

---

But though perfect in form and sound as the Magna Charta, a game law is worthless if unenforced; it is as an engine with no steam up, a gun without powder. There must be something to set it going and to keep it going. The great trouble with game protection nowadays is not want of laws, but the want of their enforcement. We have too much talking and legislating, and all too little application and practical execution. The strength of the Minnesota game law is in this, that it is excellent in theory and not less excellent in operation, for it is made a constant living force under the administration of the executive agent and the staff of wardens under his control. Commissioner Andrus has given special attention to the important work of stopping the unlawful shipment of game and fish. As noted above, the statute is explicit on this point; it forbids export, gives the wardens right of search of cars and other receptacles, and even requires the agents of transportation concerns to notify the officers of illicit shipments of game. The smooth operation of such a statute must depend in large measure upon the coöperation of the railroads and express companies; and after no little effort this has been secured. We have in years past referred to the enlightened policy of the Northern Pacific Railroad with respect to requiring from its agents a careful regard for the non-export game laws of States and Territories traversed by its lines; and we should expect then to find it coöperating as it does with the Minnesota Commission in making effective the transportation law. The Northern Pacific and the Great Northern roads issue circulars to their agents, instructing them that the Minnesota law must be obeyed; and that the game officers must be given every facility to examine suspicious shimpments:

NORTHERN PACIFIC EXPRESS COMPANY.

OFFICE OF SUPERINTENDENT, Middle Division, St. Paul, Minn., Dec. 1 1893.—*Agt. Nor. Pac. Express Co. at Minn.:* DEAR SIR—It is the policy of the Northern Pacific Railroad to, as far as possible, protect fish, birds and animals along the line of its oad from being destroyed by "pot-hunters," fishermen, etc., who fish or kill for profit only.

Employes of the Northern Pacific Express Company are strictly forbidden, during the open season, to handle and ship fish that have been illegally caught, birds and animals that have been illegally killed.

During the closed season you are strictly forbidden to receive and ship venison by express, to any point in the State of Minnesota, or out of the State. It is unlawful to do so.

The dates of open season, during which fish, birds and animals can be lawfully handled, are as follows, viz.:

| | |
|---|---|
| Fish | April 15 to Dec. 1. |
| Woodcock and plover | July 4 to Oct. 31. |
| Prairie chicken and grouse | Sept. 1 to Nov. 1. |
| Partridge and pheasant | Sept. 1 to Dec. 1. |
| Duck, geese and snipe | Sept. 1 to April 25. |
| Deer | Nov. 1 to Nov. 20. |

Five days after close of season is allowed to dispose of stock on hand.

None of the above must at any time be shipped to points outside of the State.

The laws relative to the above were made to be observed and this company expects and insists upon a strict observance of them by its employes, and will not countenance, in any way or manner, any collusion on the part of its employes with any violators of the law in their attempts to impose upon the company by shipments of fish and game not in their proper title. If any violation of the game laws of the State, or any evasion of them, by any of the employes of this company shall be brought to my attention, the offending employe will be discharged from the service of this company, and in addition be held accountable for any loss we may sustain by his not complying with these instructions.

W. S. HAY, Superintendent.

---

NORTHERN PACIFIC RAILROAD COMPANY.

(Thomas F. Oakes, Henry C. Payne, Henry C. Rouse, Receivers.)

GENERAL FREIGHT DEPARTMENT, Circular Letter No. 10, St. Paul, Minn., April 26, 1894.—To Agents: Notwithstanding previous instructions that have been issued, some agents still continue to disregard the Minnesota State laws governing the transportation of game and fish. Each agent has been furnished with a card and a circular of this department affecting game and fish shipments, naming the dates between which it is unlawful to kill or transport game, etc. It is the purpose of this company to work in complete harmony with the State officials, and the co-operation of agents and other employes to this end is earnestly requested.

It is not a difficult matter for agents to ascertain the names of parties who would be liable to ship these commodities out of season, and hereafter we would be glad to have you use extra precautions to prevent such getting into our possession for transportation. If any suspicious shipments are offered, you will say to the shipper that you have instructions not to accept same unless you are first permitted to examine the contents. If, upon investigation, you find it to be an illegal shipment, it must be refused.

There is a State law authorizing game wardens to examine suspicious shipments, and if one of them should present his credentials to you, and satisfies you that he is a proper officer, you will allow him to proceed with the examination. We have furnished each of them with a letter to agents, authorizing them to examine suspicious shipments. Should he find prohibited goods and desire to confiscate them, he will give you a proper receipt and take possession of them. If the examination should take place after the goods have left shipping office, all charges will be paid by the warden taking them into his possession.

S. L. MOORE, Gen. Freight Agent.

---

GREAT NORTHERN RAILWAY CO.

ST. PAUL, Minn., May 23, 1894.—Circular G. T. M. No. 71.—Transportation of Game and Fish in the State of Minnesota.—To Agents: The attention of agents is again called to the importance of following implicitly the instructions which have been already promulgated with respect to the transportation of game and fish in the State of Minnesota. Each agent has already been furnished with full information relative to the dates between which it is unlawfull to kill or transport game or fish. Agents are earnestly requested to use every precaution with a view of working in perfect harmony with the State officials in this matter.

If any suspicious shipments of game or fish are offered you will advise the shipper that you have instructions not to accept the same for transportation, unless you are allowed to examine the contents, and the shipment must be refused if found, after examination, to be illegal.

Game wardens appointed by the State have been authorized to examine any and all shipments of game and fish with a view of satisfying themselves that the shipment is made in accordance with the existing law. We have furnished these wardens with a letter to our agents authorizing them to examine suspicious shipments. When you have satisfied yourself that he is a proper officer, you will allow him to proceed with the examination. In the event of his confiscating prohibited goods, you will allow him to take possession of the goods, getting therefor a proper receipt. If such seizure takes place after the goods have left the shipping office, the officer will pay you all charges before taking possession of the goods.

W. W. Finley, General Traffic Manager.

Mr. Andrus has also secured the co-operation of the express companies and they too have issued instructions to agents, similar to these of the Northern Pacific Express Company:

*To all Agents Northern Pacific Express Co:* Gentlemen—This letter when presented to you by —— ——, game warden of the State of Minnesota, will be your authority for allowing him to examine any packages suspected to contain game or fish shipped out of season, and contrary to the laws of the State of Minnesota. Yours truly, W. S. Hay, Superintendent.

The permission thus accorded to enter freight and express cars and offices obviates the necessity of search by warrant; and with such machinery the Commissioners have the transportation of game and fish practically within their control.

The cold storage companies, also, recognizing the authority of the Commission and admonished by the test suits referred to, have acceded to requests that they should co-operate with the authorities to make good the provisions of the law as to possession in close season, and have refused to receive game during the close season, and at the end of the open season they report to the Commissioners the amount of game on hand and the names of its owners. Under the Supreme Court decision the Commissioners are authorized to take into possession and dispose of all such game.

Now, what is the result of the new law and its administration? The Commissioners advised us the other day, in reply to our inquiries: "As a result of our labor during the past year we have to say this: On the first day of the open season, which was Sept. 1, for birds in this State, there was not a bird to be had in the open market. It had been customary heretofore on the first day of such season to have on sale anywhere from two to five thousand birds in St. Paul and Minneapolis, and the incoming trains from the game sections of the State have been laden with birds that have been killed previous to the open season, and were ready for market on the first day of such open season. This year on the last day of the close season a warden was sent out on each road that centers in Minneapolis and St. Paul, who boarded the train somewhere after dark and whose instructions were to take possession of any and all game that was offered for transportation up to daylight on the morning of Sept. 1. There were nine of these wardens, and it gives us pleasure to say that there was but one batch taken on all these roads by any of the wardens, and this was a little bunch of thirty-two birds. The facilities offered us by the transportation companies for transacting our work were all that could be desired and no obstruction was placed in our way."

Here then in Minnesota we have game protection that protects. The system is not perfect; there remains much to be done. The Commissioners themselves would be the first to say so much as that. But the past and present give abundant earnest for the future. Nowhere else is the promise for fish and game interests better assured than for those of Minnesota, if they shall remain under the same wise guidance and control which have brought them to their present development. To that control they may well be intrusted.

The citizens of Minnesota are to be congratulated upon having as the executive agent of their Fish and Game Commission so zealous, active and efficient a gentleman as Mr. W. P. Andrus. He has the good of the cause earnestly at heart. He has proven himself possessed of unusual executive ability and force in the administration of the duties connected with his present position, being quick to decide all questions that require courage, and then to adhere firmly to such decisions. In the management of the large force of wardens under his direction he has displayed particular aptitude and discretion. He is a born leader in the cause which he has championed; and the interests intrusted to his care by the State have been protected. His reputation is not confined to the State of Minnesota, but he is widely known and quoted as authority in his field.

His efforts have not only been directed to the protection of game and fish, but he has taken an active interest in their propagation and distribution. The fish hatcheries of the State have been under his immediate control, and from a small beginning he has in the past four years made hem now of great value. The output has been largely ncreased and many dollars have been added annually to he State's resources through his efforts in this line.

He is the right man in the right place, and should be continued in the position which he now holds. All of the transportation companies and those doing business in the State who come in contact with this department bear witness to Mr. Andrus' special adaptability for the position which he occupies. The sportsmen of Minnesota cannot render a more valuable public service to-day than to urge upon Gov. Nelson the reappointment of Mr. Andrus when his term shall expire next month; and Gov. Nelson cannot give a better assurance of his own concern for the promotion of true fish and game protection than by continuing Mr. Andrus in the office where the State may have the benefit of his ripe experience and proved capacity and devotion.

## *PRESERVES IN THE ADIRONDACK PARK.*

We give to-day a carefully prepared map of the private preserves included within the boundaries of the Adirondack State Park. This map is based on Stoddard's Map of the Adirondacks and the last report of the State Forestry Commission. It attempts to show the location of the principal private preserves within the limits of the proposed State park, and in a rough way to indicate their extent. In many cases it has not been possible to locate club boundaries with any degree of accuracy, and no doubt many discrepancies will be found in the detail, but we believe that in all important features the map is virtually correct.

A first glance at the map will surprise many who have

COMMISSIONER W. P. ANDRUS.

not kept up with the recent drift of Adirondack affairs, at the great extent of club and individual preserves. It will be seen that the heart of the region, so to speak, has been cut out and appropriated by private interests. From east to west a cordon of preserves girdles the Adirondacks, and, with few exceptions, all the best and most desirable lands and waters are potentially closed to the public.

It is somewhat startling to be told that the private parks in the Adirondacks to day occupy a considerably larger area than the State of Rhode Island, and that a man might travel ninety miles in a comparatively straight line without being fifteen minutes out of sight of a trespass notice. This is what the Forestry Commission report says of the State lands:

The private preserves in every instance are in one solid block; the State lands are scattered in small parce s all over northern New York. Some of the preserves have 100,000 or more in one solid forest; the State has not 15,000 acres in any one parcel.

The State of New York is alone responsible for this condition of affairs. The individuals who own the preserves have only done what any one else would do who had the means and inclination. In fact, these individuals in many cases have won a right to the esteem of the community by the disinterested way in which they have administered their great holdings. In some of them, such as the Adirondack Mountain reserve, the public is accorded practically the same privileges as club members, and very few have tested the extent of their legal rights by closing their waterways or paths.

The Forestry Commission, appointed April 10, 1893, is doing now what should have been done years ago, and it is safe to assume that much good might be accomplished even in this late hour. The Commission has mapped out a practical plan for the State to gain control of the remaining land not already in its possession, and aside from that owned by clubs, and it is hoped that the Legislature will awaken to the necessities of the case, and appropriate the three and a half million dollars required.

The State Park as defined by the Commission embraces an area of 2,807,760 acres of land, or 4,387 square miles. Of this the State at present owns 551,093 acres. It also owns 180,366 acres in the immediate neighborhood, but outside the park, which can at any time be sold and the proceeds used to buy land inside under certain conditions. The remainder of the land within the Park limits, or about two and a quarter million acres, is held under private title, and of this about 825,000 acres may be classed as private parks. The Commission ask for the $3,500,000 appropriation to purchase about 1,200,000 acres of land available within the Park limits, exclusive of the private preserves. In addition to the parks shown on our map, there are about 14,000 acres probably within the limits of the park belonging to clubs which could not be located, and about 90,000 acres are owned by clubs outside the limits.

## *THE CUP NEGOTIATIONS.*

So far as it goes, it is gratifying to know that the long contention over the America's Cup has finally reached a point where the real issue will be decided; apart from the great mass of immaterial and irrelevant details which have thus far obscured it. The idle discussion of the conditions of previous races has been abandoned, and the position of each party is now clearly defined. On the part of the New York Y. C. there is a positive refusal to make any terms save on the basis of a full and complete recognition by the challenger of both the legality and fairness of the new deed. The Royal Yacht Squadron, on the other hand, has expressed the strongest condemnation of the new deed and has twice refused to race under it.

The question now is, which side will make a full and unconditional surrender; and yachtsmen will await anxiously the decision of the Squadron on Jan. 7. Should it recognize the new deed there will be a race next year; should it stand firm in its present position there will be no race for the America's Cup until the New York Y. C. shall do openly and officially what it has already done informally and irregularly, *i. e.*, repudiate the new deed of gift.

Should the Squadron on Jan. 7 decide to recognize the new deed, such recognition will be based on the understanding that by its new interpretation of the power and extent of the mutual agreement clause, the New York Y. C. has formally and officially established a precedent which shall be binding for all time. This assumption, however, will not hold in the face of a precedent established by the New York Y. C. in its decisions for twenty years—that a holder of the Cup cannot recognize as a challenge any letter or document which does not comply strictly with the specifications of a "challenge in due form," as laid down in the deed of gift. As late as 1886 this decision was most emphatically enforced in declining the challenge of the Royal Clyde Y. C., and it was affirmed a year later in the refusal to recognize as a challenge the letter of Mr. Sweet, giving notice of an intention to challenge and making overtures for a mutual agreement.

In view of this precedent so strongly established, and of the action of the makers of the new deed in debasing the mutual agreement clause to a subordinate position where it relates to details and not to essentials, the present position of the club in repudiating the dimension clause and restoring the other is most illogical and inconsistent. What is worse, if the words of the new deed mean anything at all, this new interpretation of its provisions is distinctly illegal.

In accepting the challenge of Lord Dunraven in 1892, with but one dimension given, the New York Y. C. clearly violated Clauses 5 and 10 of the new deed. This year the same thing has been repeated, and the committee has even gone further and offered to sail a match in November, in opposition to the plain words of Clause 5.

Should the Royal Yacht Squadron accept the terms now offered, and agree to race under the interpretation now placed by the club on the clauses in question, it may, in the event of winning the races, be confronted with a perfectly legal objection on the part of members of the New York Y. C. to the delivery of the Cup, on the ground that the club had no right to offer it on terms other than laid down in Clause 5.

We repeat what we have many times urged, that there can be no permanent and satisfactory restoration of racing for the Cup under the new deed of gift, whether interpreted legally and literally, as first intended by its makers, or under the absurd and illegal misconstruction of its provisions which they have adopted as a last resort to obtain races under it.

One of the industries of Essex county, N. Y., which should not be overlooked, is the capture of bears and rattlesnakes. The committee on bounties report to the Board of Supervisors of that county that during the past year they have allowed twenty-nine claims for the bear bounty aggregating a total of fifty bears, and fifteen claims for the rattlesnake bounty, with a total of 178 snakes. Each bear cost the State $10 in bounty money and was worth much more to its captor. A conservative estimate would make bears worth on the average, including bounty, at least $25, which foots up for the fifty to the neat little sum of $1,250. The rattlesnakes only drew a bounty of a dollar a piece, but no doubt something additional was realized from their oil and skins, so that they probably brought their captors over $200 in cash. The hunting for both snakes and bears is generally done in the early spring or the fall at a time when other business is not pressing, and we have no doubt that this item of nearly $1,500 came in very nicely for the sturdy Adirondack and Champlain hunters.

# The Closing Year.

## THE ANSWER TO THE CHARADE

*In our issue of Dec. 22.*

YOUR T-Rail Charade I happened to see,
And I hereby invite its author to Tea;
That is, if he's likely to be so inclined.
I'll have a few Rail served just to his mind.
The Trail to my camp is no myth, nor a dream,
And he'll be just as welcome as FOREST AND STREAM.

CLEVELAND, O. R. C.

## BRISTOW'S CHRISTMAS GIFT.

SMITH being habitually a brisk walker and well known, is exposed to reasonable inquiry when he comes limping on a crutch down town of a certain morning. Jones catches sight of him, and two rods off, sends out a hail:

"Hello, old man, caught you at last, has it! High living, eh! It'll do it every time," and Jones advances, talking and increasing his hilarity at each step.

"It's not gout," remonstrates Smith, halting and reluctantly surrendering a hand.

"Oh, no," retorts Jones in a tone that pronounces Smith a liar. "But, say, old fellow, the best thing in the world for it is—"

And after Jones has delivered himself of his prescription and given directions for general treatment, Smith catching his breath declares, "a sprained ankle," fortifying the contention by referring to a window curtain and "a rickety step-ladder."

By the time Smith has unburdened himself to six or eight effusive sympatizers he is ready to faint or return home without accomplishing his down town mission.

"The situation is amusing rather than irritating," remonstrates my friend Bristow, "and indicates an upward tendency in our social evolution. A few thousand years ago Jones would not have troubled himself concerning Smith's affliction in any circumstances; he would have abandoned Smith to his fate, if indeed he had not put him out of the way, after the manner of wild animals who encounter a wounded companion."

Bristow is one of those happily constituted mortals who finds something to approve of in a common pebble picked up by the wayside—its polish is bright, or its symmetry perfect, or it possesses some other quality commending it to his favorable consideration; the thorns never trouble his fingers in June when the roses are in bloom, and the bushes, even hid in their straw shelters, have a beneficent influence. I have known him to admire a black baby, and shall never forget the delighted surprise he once exhibited on touching a pickaniny's cheek and discovering how dainty the dark skin felt—"as delicate as any white baby's," and "You never saw a white baby with such beautiful eyes."

When Bristow built his cottage he selected an east and south exposure. His friends remonstrated.

"Don't you know, Bristow, how hot the sun beats down on summer days in Colorado? Why, man, you'll melt."

"Don't you know," says Bristow in exchange, "that on the warmest day all you have to do is to get into the shade and you will be cool?"

"But how the sun will glare in at those south windows."

"Yes, and its glare is invariably tempered by the soft south wind. In the winter, when the sun is welcome, one has less ice and snow on the sidewalk. Our beautiful mother gives us always compensations."

From cellar to garret Bristow contended and felt obliged to give reasons—what a queer house it would have been had he followed the fraternal and diverse suggestions! One would have no cellar because cellars are unhealthy, another insisted upon a cellar under the entire structure. One was opposed to garrets because garrets are places for refuse and are sanctuaries for rats and mice. Another liked a garret because it was pleasantly associated in his mind with damp days, while still another deprecated garrets because of youthful tribulations yet lingering in his memory—Bristow's garret is immense. Open fireplaces and grates were dirty, said one, and a source of misery to the light of the house. One man's wife, insisted the protestant, had applied for a divorce because of grates. Steam heat, another insisted, threatened leaks and was not uniform; hot air, declared another, was conducive to drafts and pneumonia. Bristow has grates and the sunshine lingers about the house on cloudy days.

But what could have moved Bristow to introduce such an odd window in the west gable, a window at least 6ft. long horizontally, and 18in. high! One single light of absolutely perfect French plate; it marred the appearance of that entire end of the house. They concluded that Bristow was a man of odd fancies and he was allowed the window under protest. This window served as one of the outlooks of the owner's den; the south window, of an ordinary pattern, commanded a view of the electric light swinging at the intersection of the streets, and afforded opportunities for the study of the shadows from the foliage of the elms on summer night and of the ghostly limbs in winter. This den was 20ft. long, perhaps by 12 in width, had a low ceiling, a mantel and a grate, and the walls were done in terra cotta. There was a flat top desk at the end furthest from the odd-looking window, where Bristow was wont to work upon occasion or read with the desk for a foot rest. Along one side were book cases, conveniently low and well-filled, while above an engraving or two relieved the plainness of the walls. Over the mantel was a broken trout rod, preserved as a memento, and above it a portrait, in oil—the portrait of a beautiful woman with a wealth of love in the brown eyes for the little four-year-old on the same canvas, who looked up into the brown depths confidently, yet with a ripple of mischief on his rosy face. A variety of pipes lying on the mantel and a Japanese jar hinted of delightful solace of winter nights, when it stormed outside and the grate was indeed grateful in warmth and invited one to dreams. And dreaming was a weakness of Bristow's.

He stood at the south window for a half hour one evening, leaning against the side, watching the snowflakes silently falling aslant between him and the arc light. Then he drew down the curtain, turned out the lamp on his desk, possessed himself of a great easy chair in front of the grate and with his head comfortably resting, gave himself up to the contemplation of the faces above him. The glow from the fire seemed always to him to deaden the accessories of gown and headdress and to intensify the warmth of those faces, to give them an air of life looking out of the shadows and down at him, for no matter what position he took or what angle, the dark eyes seemed to follow him always with the same smile of loving tenderness. There crept into his soul a longing that was welcome, more earnest because in a sense unattainable and that expressed itself in the prayer:

"Backward, turn backward, oh Time in your flight,
Make me a child again just for to-night."

Bristow uttered the appeal fervently, but still with a smile on his lips, such as the little one on the canvas might have worn in putting up a child's supplication, hardly fearing a denial, yet not certain of concession. The old trout rod caught his eye for an instant and served as a connecting link, resolving itself into a rude pole with a crook at the end and a bunch of worms dangling, that had in it a promise of fatal results to any stray eel inhabiting the brook that skirted abroad meadow. He saw the alder bushes with a wealth of berries, a grand old sycamore on the verge of the water, slightly turbid from a recent shower, and the little pool under the roots of the old tree. He saw the bait sink below the surface, felt the pole's point touch the bottom, and in a few moments the unmistakable seizure of the lure. Then he remembered the sudden elevation of the pole, a writhing eel in mid-air, and the shriek of a woman. A woman in a summer dress of white, dainty, clinging stuff, that enhanced the grace of every movement of the shrinking figure; her hands were extended to ward off the impending horror, and from one wrist dangled a broad-brimmed straw hat. And the face! a beautiful face! the forehead framed in a cluster of short dark curls, the red lips parted disclosing the white, even teeth, and the brown eyes magnificent in their expression of abhorrence. All this he caught as he turned at the shriek. When the captured fish loosened its precarious hold and dropped to the ground there was another half-suppressed cry of fear, a half turn and a hasty retreat of a few steps—the alarm was honest; she dared not stand still, or run away or come to him. Bristow often laughed as he went to her, and sighed now, with a smile on his lips, at the remembrance.

And again that face, always the same, was turned up to him as he clung with one hand, like a young monkey, to a swinging vine where the fox grapes hung beautiful and lush, and dropped into the extended pink palms a tempting cluster; the skins of some were broken by the fall, and the rich juice offered a contrast to the hands whose touch was unlike any other he had ever known. He could see the colors, the pink and white tinged with the delicate purple. He could see the broad meadow with its waving grass ripe for the harvest, and above all the sweet monitor happy as himself, standing there—the chief light in all the joys of that summer afternoon!

And again, after the lapse of years, the autumn leaves were falling and there was a weary head softly pillowed, with threads of silver here and there about the temples, yet to him there was no change in the beautiful face.

The quail were calling to each other out of the brush and tangle skirting the meadow as he stood in the midst. The dainty hues of the autumn twilight were giving way to darkness when he heard the familiar sound of wings. The approach was swift, whirring over the open; the little 12-gauge was quickly brought to the shoulder and directed at a bevy of a dozen or more flying close together; half the flock would come to grief, no doubt; they passed, the trigger was pressed, the hammer fell—it was the only response!

"It is the first time the caps have failed me," murmured Bristow. "It is not your fault, little gun—we have five—perhaps that is enough—she will need only one, maybe not that," he repeated with a sigh, just as he had spoken to himself a dozen or more years before.

And yet again, not after the lapse of years, but only after a little while, there came a change. The beautiful face was white and still, and there was no responsive light for a moment in the loving eyes, but only for a moment; and then, the shock passing, the face was the same as it had always been to him. With his own still upturned to it, he thought of the snow falling outside, and of one mound that was being covered, the one among many that claimed an interest for him, and he thought, with a little shiver, of the cold, the desolateness and the dreadful quiet, and the cry escaped him:

"Oh, mother, come back from the echoless shore,
Take me again to your heart as of yore."

And then he was conscious of a noise outside his door, a fumbling at the knob, and then, brushing his hand across his eyes, and then of another looking over the first one's flaxen head.

"Come, Governor; come, Belle," and the apparitions in white responded by climbing into his lap and stretching out four pink feet that became transparent in the light of the glowing coal. "You have brought your stockings, I see," continues Bristow, adjusting himself and his pretty burdens to the situation.

"Is he sure to come?" inquires the Governor.

"Sure to come," Bristow affirms, and the sad weight in the aching heart flitted just as she wished that it should.

"Tell us a story, papa," pleads the Governor.

"Yes, tell us a story," echoes Belle.

Later, when the mythical visitor—no, when the mid-winter visitor—had accomplished his mission, his aides de camp lingered. The fire had burned low in the grate, and Bristow stood by the desk, one hand upon the lamp, taking a final survey of the offering that knows no sacrifice.

"Everything seems in place," he says gently, his arm finding its way around the figure at his side.

"How happy they will be," she answers, looking up. "It will be a love day—it has stopped snowing and the moon is shining brightly. Look!"

Bristow had extinguished the lamp, the room was quite dark, and they stood facing the odd window in the western gable. Thirty miles away Monte Rosa reflected the moon's rays, as she stood towering and white, garmented in her fresh Christmas robe; her summit was as clearly defined against the azure as it would be at midday, the deep gorge in her breast lying in shadow and marked by the glittering apex of a less pretentious mountain in front; the foot hills rising tier upon tier, to the grand range visible for miles, and yet seeming only rods to the enraptured onlookers. The magnificent picture was framed by the casing of the odd window.

Bristow is not averse to light exercise before breakfast, and in the crisp air of the morning he amuses himself sweeping the snow from the sidewalk. While so engaged he is hailed by Katie—Katie is the elder of four belonging to a widow neighbor who goes choring—she has put behind her barely ten summers, she has dark hair, blue eyes with freckles under them, a bit of a nose that seems a suggestion merely, teeth slightly prominent, an air beyond her years, and a cheery voice:

"A Merry Christmas, Mr. Bristow."

Bristow pauses in his work, straightens himself and pushes his hat back from his flushed forehead before he answers. When he does the smile on Katie's face brightens, if that is possible.

"A Merry Christmas, Katie, and many of them to you. Did Santa Claus call?"

"Didn't he, though, and you should see the turkey," as if the turkey were the crowning effort of the munificent visitor, "God bless Santa Claus, Mr. Bristow."

"Amen," says the other reverently, lifting his hat, and Katie retraces her steps, Bristow watching with head uncovered until she disappeared at the corner.

DENVER, Colorado. LEWIS B. FRANCE.

## CAMERAS FOR STALKING GAME.

FOREST AND STREAM'S Amateur Photography Competition brought out many interesting pictures of wild animals and birds, most of them taken with ordinary cameras. The subject of stalking with a camera is one of especial interest to sportsmen, and several articles with reference to it have been published. In none of them was any special mention made of the kind of cameras best adapted for the purpose. Any one who gave the subject a moment's thought would realize that ordinary cameras are not well adapted for such work, and especially the modern wide angle hand cameras popularly classed as Kodaks. With these it is essential that the subject be very near the camera, as otherwise if it appears on the plate at all, it will be microscopic in size and of no value whatever as a picture. Except under unusual circumstances it is next to impossible to get near enough wild animals or birds to get a successful picture with such a camera, and of course this difficulty is more pronounced the smaller the animal or bird. It would be very interesting to know what kind of a camera Mr. and Mrs. Wallihan used in getting their remarkable pictures of American big game. The camera is not described in their book "Hoofs, Claws and Antlers," but it is shown in a picture of one of the authors. It is a tripod camera, and from the appearance of the photographs, together with the statement of distances at which they were taken, it is apparent that the lens is of very narrow angle. Elk at 200yds. show very distinctly in the photographs, and with almost as much detail as they would appear to the eye. Mr. and Mrs. Wallihan have been greatly favored by the perfectly clear air of the high Western plateau where the pictures were taken; and they seem to have also been favored by unusually unsuspicious game.

Their plan of procedure, at least for the near-by shost, seems to have been to lie in wait ambuscaded near some spring or game trail with the camera aimed and focussed on some likely spot and wait till the game walked into their trap. Such a method takes for granted both great patience on the part of the photographers and a great abundance of subjects. Lacking either it would be impractical.

An English writer in the *Photogram*, who has done very creditable work in photographing birds and small animals in their native haunts, found the tele-photo lens best adapted for his purpose. His subjects were too small for even the best long focus lens; and he found the great magnifying power of the tele-photo necessary for success. The size of the image with this lens is for all practical purposes only limited by the length of the camera. It is really a telescopic lens, and enlarges the game before the image is impressed on the sensitive plate, thus reversing Mr. and Mrs. Wallihan's process of enlarging from the negative. Increased magnitudes are secured by racking out the camera, and focussing is effected by a rackwork attachment on the lens itself. Magnification, however, is secured at the expense of rapidity. This is one of the greatest objections to this lens. As the writer remarks: "But while increasing the length of camera increases also the length of focus of the lens, the aperture necessarily remains the same; hence the full aperture, which, with a length of camera of 6½in. is equivalent to *f*9, becomes at a distance of 40in. equivalent to *f*49—not a very promising aperture for instantaneous work on an exceptionally badly lighted class of subject, especially when, to obtain the necessary definition, a stop may have to be inserted, reducing the size of aperture still further."

He gives the following details with reference to his camera:

"My first attempts were made with a whole plate camera, strengthened with a solid baseboard 24in. long, and with an extra rigid front. A connecting bellows was made to slide into the original front of the camera and the extra front (which was added in order to get the length required). A drop shutter was fixed on the hood of the lens; but, even with this solid baseboard and front, the jar of the shutter was too much on such a length of lens, and I had to replace it with a Thornton-Pickard shutter fixed behind the lens. This was an immense improvement and enabled me to obtain some good results, but I soon found that I could not make use of the full extension owing to the lengthened exposure necessary. In addition to this, the labor and waste of strength in dragging about such a heavy camera and stand, together with bag of spare plates, slides, extra lens, etc., etc., was so intolerable, and hampered me so much in getting over the ground, that I was perforce compelled to discard it and have a smaller and lighter camera specially made. This is a half plate extending to 13in., and closing to 1in.; very rigid, taking quarter-plates in Edwards' metal slides, and half-plate films in single cardboard slides. The Thornton-Pickard shutter was given up owing to the click in setting and releasing being objectionable sometimes at close quarters. Out of all the hundreds of shutters on the market I could find none which would give a true and moderately quick exposure at will, and yet be perfectly noiseless. I was consequently obliged to invent one for myself, and find it very useful. This is a vulcanite drop shutter, which does not project either above or below the camera front, working on a pivot and always set. The tripod must be perfectly firm, and adjustable for various heights."

To secure his more difficult subjects the writer adopted the plan of covering up both himself and the camera with a large green bag. Some such protection is necessary for tripod cameras, and for this reason it does not seem that they are best adapted for game stalking. The ideal camera for such a purpose is one that can be used as easily as a gun, and with some approximate degree of certainty. Mr. and Mrs. Wallihan frequently lost pictures owing to the fact that their camera was not aimed correctly and did not take in the subject they wished. The Englishman just quoted lost many pictures because his game would not wait while he made the necessary preparations for capturing its effigy. Under special conditions where sufficient time is at the stalker's disposal the tele-photo lens and camera would be of inestimable value; but for quick work and snap shots it is out of the question.

Billy Hofer, who used one of these cameras for photographing big game in the Yellowstone Park last winter, found that even over snow and using his largest stop his pictures were under exposed.

The ideal stalking camera should be a hand camera of long focus—say twenty inches. It should be provided with a ground glass for focussing on top of the camera. This ground glass should correspond in size with the plate used, and should at all times show the image of the game with regard to focus exactly as it will be given to the sensitive plate, necessitating an additional lens. The camera should be built to insure all attainable stiffness, and at the same time as light as possible. Under any conditions it would be heavy, as the lenses will be large. Such a camera will be ready for instant use. Running shots could be taken with great certainty and ease. Beside holding the camera steady it would be necessary only to keep one's eye on the ground glass and a hand on the focussing screw till the game was centered, and then the little finger could release the trigger, and barring casualties a picture would result. No estimate of distance would be necessary, and after a little experience one should be able to get a sharp focus almost instantly.

Referring again to the tele-photo, the English writer quoted gives some hints with regard to development which are of general interest for this class of work.

"Even when a decently exposed plate is secured, the development must be suited to the class of subject, most plates requiring all the contrast to be exaggerated; as, for instance, a rabbit on the bare sandy ground. or among grass and nettles; or a reddish or yellowish bird among green leaves in a heavy shadow. A delicate thin negative on such subjects would be quite out of place; a well restrained developer, with a double allowance of pyro, is needed to make the most of what little contrast there may be. It is almost impossible to get a full exposure on such subjects. It is a great drawback that isochromatic plates are so slow, as they would be most useful in rendering the correct color value of the birds. I have tried them and found them perfectly useless, never having yet been able to obtain a negative with them capable of giving a print. I have not tried them since reducing the length of camera, and thereby shortening the exposure required. Still, they do not compare in point of speed with the fastest brands now made by the principal manufacturers, at least in my experience." J. B. Burnham.

## IN NOVEMBER.

"Was there ever note so sweet,
Bob White! Bob—Bob White!
Tuned the hunter's ear to greet?
Bob White! Bob—Bob White!"

Willis, the big driver of the farm wagon sent to meet us, greeted our arrival with the cheerful information that his mules had decamped while he was nodding over his stove, pending the coming of the midnight express that had just deposited us and our belongings in the freezing November air, and gone upon its way puffing and groaning through the moonlight.

Tom A., our host, at whose generous invitation we had delightedly undertaken the journey for a bird hunt on his plantation seven miles from the station, is equal to most emergencies; but for once his store of expletives failed before so ill a stroke of malevolent fortune and needs must be bettered by the combined efforts of Gene, H. and myself, that the pyrotechnic exhibition be sufficiently lurid to adequately meet the requirements of the situation. After a council of war, followed by a banquet at which nothing was lacking but viands and coffee, we released our dogs from their crates, cached our baggage, excepting the fragments left from the feast, and resolutely started out on a tramp toward quarters. Five miles of the distance were told without mishap, and then we discovered that a favorite dog, a young daughter of Kent Elgin out of Mack's Juno, failed to respond to the whistle. She had never been in the country before and we were afraid to abandon her to find the way to the plantation; so we retraced our steps two lengthened miles, whistling as we went, all to no purpose, as she had returned to the depot, where she was rescued by the repentant Willis, who had remained to search for his team.

About the time the stars gave promise of approaching day, foot-sore, weary and disconsolate withal, we reached a creek a mile from the plantation, only to find that the familiar foot-log expected to land us upon the further side, had disappeared, and a hasty search along the bank failed to reveal either substitute or make-shift that might perform a friendly office, and in safety bear our footing. Our disappointment was deep, not loud, and in sorrow more than anger we turned to gather fuel for a fire, against a possibility, most dire that men have shuddered at, that overcome of cold and hope deferred, we play the woman, and sit us down and weep.

Again the fragments from our banquet were called in requisition, and soon a mighty log-heap was aroar with flame. The past, was past—almost forgotten. Cold was a fable; hunger a myth, and beds for dalliance. We knew them not, nor sighed for other fortune than haply, this, that gave us leave here to recount our daring exploits by field and flood; swear history is prophecy, and bid our fellows mark how much more rich the future, brought to proof, than now our golden boasts. Each one had had his say, blown long and loud his horn, and when the blast was ended relapsed in silence, maybe, dreams, excepting Tom—his turn had come, along with the first gray lines in the east. Slowly he raised his head from off the friendly chunk that served him for a pillow; gravely began, as is beseeming in one who speaks of weighty deeds:

"In the day that shall vouchsafe for you something worth the doing, if, perchance, that day shall come, you boys will smile to think that once you spake of barnyard victories, and called them doughty deeds. It 'gars me greet,' but in the light of rich experience, gained from my happier fortune, truth schools my tongue to say your bags were hardly worth the count; your dogs but curs—Great Scott! What is that?"

We sprang to our feet, and in alarm hastily glanced in the direction indicated by the trembling finger of our defamer. Shade of Dogberry! not twenty feet away the stream was nobly spanned by a foot-log, hewn and squared, full three feet broad. Solemnly, quietly, without even a smile, we extinguished our fire and renewed our march toward the plantation, where, in silence still unbroken, we slipped into bed and besought nepenthe in sleep.

It was noon when the cook aroused us for breakfast, and after a comfortable meal we shouldered arms and sallied forth to attack Bob White in his coverts. No rain had fallen for several weeks; the grass was rank and the ground as dry as the proverbial powder house. The dogs worked well, however, and we had sufficient shooting to bag birds enough for breakfast the following day, to say nothing of unnumbered charges that encountered no resistance excepting air.

We were up with the lark to greet the morrow's rising sun, and in an hour thereafter were in the saddle. The day was perfect in its beauty, and but for the lack of water, every condition ideal for the sport. Added to this, our dogs were fresh and gallant rangers, with nose and speed and training. Half a mile from home expectancy was gratified as we beheld a dog, while slashing through a field of corn, wheel quickly to the left, and in an instant grow rigid as if carved from stone. The picture, finished when his mates were in, was grand indeed, and for a little withheld our murderous fire that left the covey less by three, and sent the others deep within a nearby wood, a covert safe and sure for all but one that hid from sight by a tuft of grass until a pointer, with a subtler sense, nosed him out and caught him where he lay.

We had just remounted to resume our hunt, when we chanced to see a splendid covey cross the turn-row and scatter widely in a cotton field. A few sharp whistle-calls wheeled the dogs to gun, and point on point came so fast, and such a deal of powder greeted every speeding wing, that we marveled little at the old and purblind cotton-picking crane, who dropped her bag and fled, believing, as she told some folks who stood at gaze upon a neighboring hill: "De Ku Klux [sho dun cum ergin." Despite all this, not every bird that 'rose was brought to bag, and following one or two well marked in sedge, we caught the welcome calling of another covey in answer, as it proved, to a crippled member too weak to even keep the gentle pace assumed in passing to and from their feeding grounds. The dogs were quick to locate a luckless trio, gluttons loath to leave the luscious peas when that the rest were filled. Two made proud the happy man who scored a double on the rise; the other fell, a solace to the enemy that assailed his slower motioned friends. Some rods beyond, the remaining birds were found, but before our guns were close enough to kill, a yellow, yelping cur had slipped among our dogs unseen and flushed the game that settled in the sedge upon a hill fully half a mile away. So great their number, so scattered was their flight, so well we marked them down and so strong the cord the owner of that trifling cur interposed betwixt his pet and our virtuous threat to send him to some happier hunting ground, if even once again he sought to show his scorn of dogs unschooled to chase in this, our hope swelled high, anticipating unequaled sport to come. The opportunity was beyond our hope, but alas! so poor our aim, that more than once the hero of the double most of all, we all bethought in sorrow on the cur, or any feeble pretext that hopely might excuse the four successivee fuile charges that only served to accelerate the flight of several reckless birds that singly gave three men a chance to "wipe somebody's eye." To fill our cup of bitterness over full, a grizzled farmer, lean and long and lank, came riding by and paused to tell us that our shooting was more productive, far, of fuss than feathers; but to salve the wound his words of truth produced, he said that he would show us, in his field beyond, the finest covey in the country—one that never heard a gun, and therefore, needed just the fright that we would give them to make them "ly to dog," against the time a friend of his could kill them.

The dogs made game almost upon the spot our friend averred we would find them; and at the rise more birds repaid our bettered aim than doubtless he expected we would tax the coveys. His applause, however, was generous and free; and saying he would hold our horses, he urged us to pursue them in the stubble, where they scattered nicely. Intent upon the sport, we failed to notice that he followed close behind us until the birds, flushing wild and circling back, began falling to our fusilade. Then by the half glance we had time to throw, we saw a dead bird pound that old betraying farmer in the face, another strike the beast that bore him thither, while a cloud of feathers floated all around him as though to veil his shame. When the flight was done the smoke from the one black powder gun had lifted, we beheld our horses in the distance, a madly galloping mule bore a badly frightened granger beyond the reach of danger. Our turn to laugh had come. "God bless that sturdy old farmer, for he is a regular chump."

Fifteen minutes' ride brought us to another farm, where a colored "aunty," assisted by an impish horde of dusky offspring, was picking cotton close to splendid cover. Evidently she had encountered sportsmen from the town before and knew their tricks and manners. We gave her the "chaw o' manerfac" requested and asked about the birds.

"Lord er massy, yas sah! Heaps ob 'em all erroun' dat thicket ebry day."

"What kind, Aunty?"

"Yaller hammers, feelarks, jaybirds—"

The dogs were on a point, and our interest in the ornithology of the neighborhood concentered suddenly on quail. The covey proved a large one, and yielded generously to our bag.

"My King!" exclaimed our "aunty," "you all kin shoot. You's des fa'rly numbered. I des 'low'd ter ax yer ef didn't want ter buy sum patedges my boy cotch in er trap dis mornin', when yer foun' dat gang."

Further on we met a native hunting rabbits with a hound and musket, who volunteered to show a covey if we would repay his pains with a "load er two." The terms were easy and we quickly emptied shells enough to satisfy his avarice, demanding that he lead us to the slaughter. A mighty struggle through brush and briers almost impenetrable resulted in a single bird that wisely flushed far out of range and a rabbit that, in the language of our guide, was toppled over before he had time to say "dar she go." As we were departing this sable equivocator yelled after us:

"Hi, gemmen, I tecks yer whar dar's er nudder gang ef gim'e sum mo' loads!"

In answer we presented arms as if to deliver the desired ammunition at easy gunshot, but our tormentor tumbling heels over head into a convenient briar patch in a frantic effort to dodge behind a mammoth oak, we concluded that sufficient retribution had found him out and so left him wondering what effect our nitro powder, wadded with paper, would produce when fired from that rusty musket.

It was now the halcyon hour for shooting quail—the last of sunshine due the day. How many times could each of us recall, when birds were scarce, or hard to find, we had abandoned hope and left the field but for the promise of this evening hour that seldom fails of recompense for those of energy and faith.

Passing to another field we rode into a covey feeding in the corn, that flushed and winged a graceful flight to what we thought to be their roosting ground, a plot of golden sedge, a hundred yards away. It proved Golgotha for the major part, as here, if not before, we found our solace for the poor success that brought the farmer's scorn upon us, a few brief hours before. But one of all that rose before us escaped to answer with his piping treble the good-night calling that, from the other few unfound, would fill the twilight with plaintive melody. He too, no doubt had failed, but for the strange delusion of the gunner nearest to his flight that mistook him for a lark until a second glance, too late, responsive to our guying, convinced him that "it was a bird."

The day was done—at least, the actual zest of point and flush; of rapid aim and deadly trigger pull was past; its real pleasure just begun. For there was in the old plantation home a cavernous fire-place with a roaring log-heap lighted for our coming; a dinner on the table and an appetite to eat it that money could not buy. And there were pipes of comfort; a glorious bag to count and string for city friends. Last of all, and well accounted best, was the vigor thus renewed for months of arduous toil; health obtained wherewith to strive for honor, wealth or bread; pleasant memories to beguile a many weary hours to come and friendships here begun and here revived to brighten life forever. Will Scribbler.

## THE CAMP OF THE NIMRODS.

Manistee, Mich.—Prevented by the cares of business from taking my usual hunt with the Nimrod Club, I had to content myself with a flying visit to camp for one day. The club members are all young business men who cannot get away for any length of time. So the camp is always located within driving distance of the city. The hunting is not so good as further away, but we have to content ourselves with doing the best we can.

I found the camp, about fifteen miles out, located on the banks of a clear cold trout stream, where it was sheltered on all sides from the wind. As I descended the steep hill to the creek, my eye caught sight of three deer, a big buck and two does, suspended from trees. As the boys had returned to town to vote, and had actually hunted but four days, they had made a good beginning.

To say that the camp was a "dandy," a "daisy" or anything else which in the current slang denotes superiority, does not express it. We have always had a nice camp, but this went ahead of all previous ones. Proximity to the city enables us to take out many comforts and luxuries which can be done without on a pinch, but are extremely nice things to have.

Placed in a row on the bank of the creek were three tents, each one of which was set on the top of a box, of its own size, formed of 2-inch plank set upon edge, to the height of 2ft. This made the walls 51in. high, and greatly increased the standing room inside. The "house" tent was a 12×20 and was furnished with a floor, wire spring cot beds for seven persons, with mattresses and pillows in abundance, sheet-iron heater, gunrack, wardrobe, large table and everything *à la mode*, not forgetting a keg of cider in one corner.

The cook tent, wherein presided Carl, a snuff-colored "gemman," presented an appearance of great style with its ample stove, set in a box filled with sand, neat lockers and cupboards for dishes and cooking utensils, and long dining table with a white oilcloth cover, and benches alongside. Carl was an artist in the culinary line and the dishes which he set up, considering what he had to do with, were worthy of a French chef. Eaten with hunger sauce they were enjoyed by us as nothing ever served to pampered appetites could be. The third tent served as quarters for the horse which was kept there for dragging in deer and for taking trips to the city. Everything about all the tents was as neat as wax and afforded such a contrast to the condition of things in neighboring camps that the outfit was known as the "dudes' camp." The "dudes," however, had none the worst of it in the show of game at the end of the season.

I met with a hearty welcome, and after viewing and duly admiring the camp, was taken in to dinner. This over Bob kindly piloted me out through a mile or two of old pine choppings to some green timber which grew on edge of a large swamp. The choppings had all been swept by forest fires during the summer and the only feed for the deer was in the swamps and along the streams. Posting me upon the top of a cone-shaped sand-hill which commanded a view of a considerable portion of the swamp, Bob went off to his own stand further away. There were plenty of hunters near the upper edge of the swamp and it was expected that the deer in fleeing from their pursuers there would come toward our end.

The day had so far been warm and pleasant, but now the wind began to blow from Lake Michigan, not half a mile away, and the air momentarily grew keener. The surf on the beach, at first only a gentle murmur, grew louder and louder as the wind increased in force until it became a steady roar. The sun disappeared in huge bank of clouds and soon a few fugitive flakes of snow came drifting into my face. A few moments later a veritable blizzard was getting in its work, and mindful of my lonely drive home I concluded to start for camp.

Straightening up from my half recumbent position in the lee of a big stump, I began to stamp my chilled feet and thrash my numbed hands together when, whew! bump! bump! crash! bump! crash! sounded from my rear. Wheeling around, I got a dissolving view of a white flag disappearing in the whirling snow. To snatch up my rifle and let go a couple of times in the direction from whence the "bumps" were coming down wind was all I could do. For all I know that deer is going yet.

I suppose the deer had been prowling around in the slush, and on the approach of the storm had made for cover. Coming down wind it was right upon me when I stood up. That first snort of surprise and fear sounded very close.

Consoling myself with the reflection that the deer had no business to come sneaking up in my rear that way, I stumbled back to camp as best I could in the fast-gathering darkness and blinding snow. Reaching it at least, I hurriedly hitched up my old nag and put out for home.

That was a nice trip. Figure to yourself, as our French friends say, two miles of old logging road leading through a clump of fire-killed timber, and blocked every few rods by fallen trunks, around which the boys had made a crooked path which was barely discernible by daylight. Imagine a hard-mouthed brute of a livery horse, unaccustomed to country roads and anxious to get home to his warm stall, which pulled on the bit with all his might in his endeavor to strike a 2:40 gait on such a road, which was either blind or regardless of such minor obstacles as trees, stumps and fallen trunks.

Think of the wildest, nastiest, coldest night that you ever saw, and then think of me out in such a night, on such a road, and with such a horse!

Having nearly wrecked the wagon a dozen times; having used up all my matches in vain attempts to discover the track; having felt about for it on my hands and knees, scratching my face and tearing my clothes, I finally gave it up as a bad job, hitched the old fool of a horse to a tree and went back to camp for help.

Bob, who had come in, kindly took a lantern and piloted me out to the main traveled road. Even when straightened out for home on a fairly straight and good road, that horse would not keep in the track, and wanted to take every cross road that he came to. This he finally managed to do while passing through a thick piece of woods, and the next thing I knew the wagon was bouncing over the ties of an old logging railroad. I had to get out, unhitch the horse and turn the wagon around, hitch up again and feel my way out. Had not the storm lulled for a few minutes and the moon peeped out from behind the clouds, I must have spent the night there in the woods. I finally got home, having been over five hours on the way. Had I a deadly enemy, I would try to get him off in the woods with that horse on a dark night.

F. A. MITCHELL.

## A DAY IN THE ADIRONDACKS.

BINGHAMTON, N. Y.—Every sportsman and true lover of nature can recall many scenes and experiences of lake, wood and forest, that seem to live as bright spots in the memory long after more important events have been forgotten. The remembrance of the first success of every lover of outdoor sports is always long to be remembered.

It was an almost perfect day, a dim haze slightly obscured objects at a distance, and the warm sun made the air in the woods seem almost perfection; it was not the hot burning sun of an August day in the city, for there was a delicious coolness in the air, which to one tired of city work and bustle was very refreshing.

My guide and myself had left camp about 4 o'clock in the afternoon; we followed the shore of the lake to the upper end, and ascending the ridge we followed the trail on top, and in a few minutes descended to the shore of another of those innumerable ponds with which the Adirondacks abound.

The two ponds were about 100yds. apart, and connected by a little rivulet, which at this season of the year was almost dry. The guide took the larger pond in the canoe, while I followed the shore of the smaller one, and after reaching a point opposite where a deer had been seen a few days before, I sat down near the water's edge and waited. The opposite shore was fringed with low bushes which extended out into the pond several rods.

I had lost a shot the day before from the canoe, because my guide thought a .32-40 cartridge was too small for deer, and insisted on trying to get near enough to use buckshot. However, I had had enough experience with the penetration of my little Daly, that I now determined that if a deer showed itself I would find out whether my "third barrel" was of any use or not.

The rays of the setting sun threw a flood of light on the opposite shore, while the deep, cool shadows of the trees above me made the scene an ideal one; there was only one drawback and that was "punkies." The little pests seemed to think I was there for their especial benefit and it took liberal doses of "fly medicine" to convince them to the contrary.

The solitude and stillness of the woods seemed delightful, when all at once I heard a sound which set my nerves tingling, and I had a decided attack of "buck fever," a slight rustling of a leaf had come to my ears from the further shore; but after trying in vain to catch sight of the animal that made the noise I came to the conclusion it was of no consequence and that no animal the size of a deer could reach the pond through the open woods without my seeing it.

Suddenly I had a relapse, and my second attack of "buck fever" was worse than the first, for right opposite me I could see the top of a doe's back over the bushes, calmly wending her way to the water's edge.

When she reached the open water her head and neck only were visible; I raised my gun and aimed for her head, but I knew from the way my hand trembled I must wait for a body shot or our camp would still be without venison.

After "slashing around" for a few minutes the doe suddenly disappeared, but I could tell from the sound she was headed for the woods again; she soon appeared on a little knoll a short distance from the water; knowing this was my opportunity I held for the shoulder and fired, the doe gave a sudden jump of surprise and stopped, not knowing the direction of the sound; her delay was fatal, for quickly breaking my gun and slipping in another shell I made the quickest shot of my life, and saw her flag drop and she pitched forward out of sight behind the bushes at the water's edge.

I soon had the guide's assistance and we carried the meat into camp, where I received the congratulations of the rest of the party. My first shot had missed her entirely, but the second had hit her in the shoulder and passed clear through her body, breaking her neck. There is no question but that a larger bullet gives a greater shock, but if a man can have only one gun and wants something for all kinds of game I think that the three-barrel is the ideal weapon.

The beautiful picture of the grand old woods, the deer standing in the open space across the pond, with the rays of the setting sun shining on her bright red coat, is one that will always live in my mind's eye and be recalled with unalloyed pleasure.

T. G. W.

## MONSTROUS BIRD WITHOUT FEATHERS

ON Christmas eve the annual session of the Birds' Debating Society was held in Birch Hollow. It was quite a mournful meeting, for there were a good many empty twigs. All the fashionable birds, and birds who did not like the climate, and birds who pined for good society, had winged their way to the sunny South. That fine old country gentleman Mr. Woodcock had gone with all his family weeks and weeks ago. Mr. Jack Snipe, the dizzy young sport, had ceased his drunken revels in the neighborhood and left for Florida by the Air Line. Mr. Bluejay, a dapper young dandy of a musical turn of mind, but who really had the worst voice on record, had flitted away in company with Mr. Yellow Hammer and Mr. Bobolink. Even such nobodies in the social world as the Swallows, the Sparrows, the Robins, the Martins and the Wrens, and people like the Plovers, the Cranes and the Herons, who never were happy unless they were making a spread at watering places, had joined the common exodus.

So it was not at all surprising that the meeting of the society was somewhat slimly attended. However, Mr. and Mrs. Birch Partridge and Mr. and Mrs. Spruce Partridge, with all their surviving children, were present, as well as Professor Cock Partridge, the patriarch of the tribe, who looked so wise and aged that he was unanimously elected to the chair. The chaplain, Dr. Crow, asked a blessing in a somewhat doleful tone. Miss Snowbird presided at the organ, accompanied by Mr. Woodpecker on the drum. Quite a rumpus was kicked up by two very disreputable characters, Mr. Hen Hawk and Mr. Cat Owl, in the rear of the hall, and the absence of the policeman, Mr. Kingbird, was greatly felt.

Order was restored at last and all the birds gave close attention to the address or lecture of the chairman, which was regarded as the chief feature of the evening. Prof. Cock Partridge was not only a great scientist, but his experience in the practical affairs of life had been so vast that his opinion on any subject was received with much respect. On this occasion his address was regarded with peculiar interest, because it was entitled "A Bird Without Feathers." We are indebted to Mr. Moose Bird for the following full report, he having, as there was nothing else to steal, carried off the manuscript of the Professor:

"The largest bird known to science," said the Professor, "strange to say, has no wings and no feathers. He must be a bird because he has only two legs to stand upon and sometimes less. He is called Man. When he was a full-fledged bird, ages and ages ago, he was called by the name of Angel, unto which state he expects, it is said, some day to return. There are many records of this Angel-bird having once existed, with wings of wondrous length, bnt as he had not the wherewithal to steer or direct his course, it is hard to believe that he was ever able to fly.

"Now, this Man-bird is a very clumsy, stupid bird indeed; yet, as he is very malicious and destructive, I wish to tell you of some of his habits that you may take warning and beware of him. I think he must be classified as a migratory bird, for he has no settled habits and is only to be seen in the forest at certain seasons of the year. Within those seasons he appears to be inspired with the most malignant hatred and animosity toward our family and, I believe, toward the Woodcock and Snipe families as well, which rage of his would be perfectly harmless but for a certain tube of iron he carries with him from which he throws a shower of leaden pills with fatal effect. He is said to have a love for the beautiful in nature, yet he seems to be jealous of all other birds who share that feeling. On many and many a sunny day before now I have been drumming on a hollow log as happy as a king, when I have suddenly caught sight of this monster creeping toward me with his deadly tube.

"I could not begin to name to you the members of the Partridge family whom he has destroyed with these flying pills during my time. One of my earliest recollections is the loss of both of my parents and no less than six of my brothers and sisters in one short day by the work of this cruel bird. Yet he is, as I have said, both clumsy and stupid; for even with his tube and pills his deafness and blindness and lack of brain would render him harmless and helpless but that he is accompanied by a dog which guides him to his prey.

"The curious scientific question at once arises: Why does this monstrous bird fly into such a passion at the sight of one of the Partridge family? Is it that he is jealous of having lost his power of flight? Is it because he is ravenous with hunger? Or is it that he conceives that we have done him a mortal injury? I am free to say that no question is so abstruse, and none has so puzzled the Partridge family from the earliest recorded times. It does not seem reasonable that the Man-bird should need us for food, for he is invariably equipped with a huge bag or pocket, in which there is far more food than he and his dog combined are able to consume. Moreover, when he has wholly emptied his bag, this singular bird continues to refresh himself from a long black cylinder, or bottle, which he never travels without, and which produces on him the most peculiar effects. I cannot believe, therefore, that he requires us for food, for he has plenty of it with him. Moreover, when he has slain us he does not devour us as a hungry animal would, but merely lugs our mangled forms away.

"It follows, I think, that his hatred to us is the result of a sense of injury. Now, to say wherein he can with reason consider himself to have been injured by the Partridge family, is not easy. I cannot but think, however, that he is enraged because we are so wont to laugh at him and his funny ways. Certain it is that our family has ever been noted for possessing a keen sense of the ridiculous, and it cannot be denied that no subject has moved us to uncontrollable laughter like this absurd and homely Man-bird. To see him dashing madly by us when we are not a yard above his head; to see him mistaking a root or a knot in a tree for us and hurling his pills in a rage thereat; to hear him crashing and falling through the brush and brake in a totally different direction from where we are; to hear the words of wrath and fury he employs at every petty mishap that befalls him, and, finally, to behold him late in the day resting from his labors and oiling his inner works with copious draughts from the cylinder—these things indeed have afforded, and will continue to the end of time to afford, us mirth unspeakable.

"In general appearance the Man-bird is by no means beautiful. Upon his head there is a false covering which he removes at will, and beneath this is a thin layer of hair, which in one Man-bird will be black, in another brown, in another gray and in another entirely gone! His eyes also differ in color, and, in many cases, late in the afternoon, are well-nigh closed. His jaws are covered with coarse bristles, which serve the purpose of protection, I suppose, as in the case of the porcupine. Certainly, these bristles can be shed at will without ill effects to the owner, for I have seen the same Man-bird now with quills and now without.

"The beak of this singular bird is a shapeless knob, useless for the purpose of pecking or of scent. It is often of a deep crimson hue, as though illumined with hidden fire. The whole body of the bird is concealed in a loose, fibrous skin of a brown or yellowish color, which he can shed at will. Why the Man-bird prefers to cover himself even in the hottest days of summer with this heavy coating has never been found out. If the residue of his body is as homely as his face, however, I doubt not that the Man-bird has the best of reasons for hiding himself from the public view.

"A singular fact about the Man-bird is that he seems to have no mate, or hen. No female Man-bird has ever been seen with him in the forest. I am obliged to mention, however, that there once lived an old member of the Partridge family who said that he had seen the hen bird on one occasion on the edge of a field. He said that she had no quills on her jaw, that her tongue was long and flexible, that her lower limbs were invisible, that she carried a kind of canopy over her head to shed the rays of the sun, and that the Man-bird, though thrice her size, seemed very much afraid of her. He said, also, that she took the cylinder of the Man-bird away from him, and seized him by the ear and led him home. But all this is so absurd a story that I think we may safely conclude that this ancestor of ours was dreaming, or joking, or in his dotage.

"A very singular fact, which I had almost forgotten to mention, is that the Man-bird in his travels is ever accompanied by a small stove or furnace which he carries in his mouth for the purpose of warmth. When he has not this furnace in his mouth it is because he desires to oil himself with the cylinder, and as soon as the cylinder is removed the furnace is again applied. I cannot pretend to give you a good reason for this, but it has established beyond all doubt the fact that the Man-bird is fire as well as water-proof, and hence he is classified in science by some observers as *Homo bibulus*, by others as *Homo igneus*. I thank you, ladies and gentlemen, for your very kind and patient hearing."

PROWLER.

FREDERICTON, N. B., Dec. 26.

## JUG FISHING FOR CATFISH.

OUR camp was pitched at my favorite spot, the "three maples," so named because three giant soft maple trees grew in a clump at this particular spot. They had been bent over when small, probably by a falling tree or maybe by the ice in the spring rise of the river. At any rate they bowed down until their tops almost touched the ground, and all the limbs grew straight up, forming a sylvan arch high enough to pitch a tent under and throwing a cool shade that was a most inviting lounging place on a hot day.

The savory odor of sundry Bob Whites toasting to a beautiful seal brown over the camp-fire pervaded the air, and the sleepy-heads were just taking a morning plunge in the silent river which glided past in front of camp.

At last night's council around the camp-fire the programme had been decided on for to-day. This meant that Ed and I were to "jug" for "catties" to our hearts' content, while the rest of the boys foreclosed a few mortgages which they professed to hold on the squirrel population over in the Cub Creek woods.

Ed is about half Siwash and the other half just hunter, fisherman and general good fellow, but a better companion on a hunt or cruise I have given up looking for. He thoroughly understands nature, is silent, quick to see and note everything, and understand it, too; never complains nor shirks his share, in short a companion to go with if you want to enjoy every minute of your time in the woods. And I, well I have trained with the noble red man so much that I'm able to wear a blanket with the best of them, and lose my tracks to a trailer about as quick, too, if I don't want him following me.

This is the pair who loaded twenty-five jugs into the light canoe and paddled out on the smooth face of the Big Blur that morning, while the trees still covered it with long shadows, and the morning mists were drifting slowly upward.

Our jugs had each a 4ft. line, sinker and 6/0 hook attached, and were tightly corked to keep the water out. While I manipulated the paddle Ed baited these hooks with a choice lot of minnows and frogs caught the day before and kept confined in a floating minnow basket.

Splash! Overboard they go one after another until the whole twenty-five jugs float placidly away down stream in "company front," and we drop behind to be within reach if one gets to doing a "funny turn."

Drifting along in this lazy placid fashion is about the only living definition of that time honored saying: "It takes a lazy man to catch fish," that I know of.

We drift, drift, drift, until Ed straightens up, adjusts his lank proportions to the bends of the canoe and digs his paddle deep in the water with that silent, powerful stroke of his which makes a canoe "jump."

My added strength makes the light craft fairly fly a we head for a jug which is bobbing around like mad, now rushing along on top, now diving below the surface leaving nothing but a broadening ring to be broken some where as the jug pops up again. We have almost reached it, and Ed lays forward with outstretched hand ready to

grasp it, when down it goes again. "Back water! Hard a-starb'rd!" says Ed, and I bring the canoe around to the new course. There he goes! I urge the canoe after the fleeing jug and it goes down again just out of reach. "Hold her," says Ed, and I back water hard to wait for the jug again. "Port, hard!" from Ed sends me after our prize again, and this time I get the pesky thing within reach of that long arm that sticks out like a bowsprit over the bow. "Steady, I've got him; dandy, too," chirps Ed, as he tumbles aft and gets the fish alongside, where I soon get the landing net under him, and he tumbles in over the side, flirting about a bucketful of water over us as he does so. We have a six-pounder for our first prize, and baiting up chuck the jug back after another.

A hundred yards further down stream three jugs begin doing a ghost dance about the same time and we capture two more fish.

Thus we drift along mile after mile, lazy and monotonous enough at times, exciting at others, picking up a nice fish here and there, at which Ed utters an occasional "ugh!" that means he is satisfied.

About eight miles below camp he says, "Let's klatawa, I want to eat," and as I have just tightened my belt, I answer, "Nowitka," so we load the jugs and point her nose for the shady side of the stream on an eight-mile journey that means a very late dinner. Ed makes a good picture as he works the bow paddle with an easy, graceful and noiseless dip, swinging along mile after mile like a machine, and about as tireless, too.

Our catch for the trip amounts to about 40lbs. of good catfish, which won't last very long among a healthy, hungry crowd like us.

Ed remarks *sotto voce*, as he rakes a live coal on the top of a fresh pipeful, "Nothing very 'sporty' 'bout this layout, but it's a skunkum way to get fish when you don't feel like working hard for 'em." He sized it right, too. Billy, nicknamed "Poo Gee," from his favorite adjective reports a "gick-a-loo-den" time among the squirrels, but has only three skins to show for his day's fun. Billy always was peculiar anyway, especially in his ideas of sports afield; he would rather watch a squirrel from some hiding place, "just to see what it's going to do next," than to shoot it. He never brought in a very big bag, but he could always find just the game he went after, even if everybody else said there wasn't any "within a thousand miles." I wonder how Billy could tell.

EL COMANCHO.

## MY VACATION.

THE man of wealth takes his vacation when he pleases; the professional man takes his whenever he can get it, and thanks his lucky stars that he gets any. It is not hard to imagine which of them enjoys their outing the most. Fortunate man, the writer was able to get away from the sick and the ailing this fall, owing to the need of a professional friend for something to do that would take him into the country; and not being blessed with a love of field sports, this *sui generis* assumed the burden of my work and seemed to enjoy the novelty, while I, forsooth, with several hundred cartridges and a cylinder 12 gun, bade good-bye to wife and babies and departed for a town in West Virginia, where there was a genuine old-time sportsman's welcome waiting for me. Hereafter is the tale of my week of rest; what his was, is, as Kipling says, another story.

In years gone by it was a habit of mine to go to Virginia each fall, and there, in company with some choice companions, spend a few days following dogs without much pedigree but with lots of field sense, and during the time spent in the Old Dominion not only regain exhausted strength, but return home with a better opinion of mankind in general; the hospitality was so generous, the life so full of pleasure and so free of care, the sport so excellent, everything combining to make the vacation a "thing of joy." Then it all changed; the old families went away, others richer in money but very much poorer in hospitality came in to take their places; the farms where I had hunted each season a welcome guest, were posted to all but a favored few; the game itself, as if disgusted at the new order, was not as it was in the old days, and for two years past this one reason, with others of a weightier nature, has prevented anything like an extended leave of absence from home. Hereabouts we are cursed with lots of game laws without means of enforcing the same, and being so close to Baltimore, our country is overrun with hordes of ruthless men who kill everything with fur or feathers that they can get a shot at, and boast of their bag as though it was something to be proud of. But to come back to West Virginia.

All through Jefferson county the residents are more careful of their game supply than in any other section I have ever shot over; it is not strange that with this sort of protection and the natural topographical condition of this part of the State, the best supply of Bob White is practically inexhaustible, and the entire county is a great game preserve. Every farm is posted, and the posting means business, for every land owner has no fear of prosecuting trespassers, and does it conscientiously when they start in, hence very little hunting is done by the idle of the neighborhood, if there be any such, and strangers need not apply unless vouched for by some one of responsibility, then the doors are opened wide. The country is a grand, open, rolling arena, full of picturesque views, and dull would be the man who could shoot here and not feel the influence of Dame Nature as he passes from one beautiful picture to another in search of his game.

Though only slightly acquainted with the gentleman under whose hospitable roof I stayed, the free-masonry of sportsmanship made us both warm friends before the clock had struck very many times after my arrival, and as I came to know him more thoroughly it was not hard to see why his wife fell in love with him. There was another, a sort of Damon to my friend's Pythias, a scholarly gentleman whom it was a pleasure to know, and with these two I went afield; there was another I had almost forgotten, shame be to me for forgetting Belle, she of the soft blue coat, the long pedigree, the great brown eyes and best of all such grand field qualities. Ah, me, we read of such dogs, but rarely find them outside of books; this was a reality, however, and no one but the departed Tracy with his magical pencil could do her justice. We go hunting with dogs and half the time fail to realize how much of our enjoyment depends upon their work; and after seeing the marvelously clean and clear cut work of this dog I can appreciate the truth of the suggestion made by an old sportsman when he said, "Give me a $400 dog and a $10 gun rather than a costly weapon and a cheap dog."

Now to the shooting. Tuesday came and duly equipped we three men and the dog with another handsome young Gordon bitch walked out of the town limits about a mile, and in a stubble next to the broad pike, a small covey rose wild, out of which we got two birds later; one over a stylish point of Belle, the only one the dogs found so scattered was the entire covey; the other bird was walked up. Here I saw a sample of the kind of men with whom I was in company; when Belle struck this bird, I was invited to step up and take the shot, a courtesy offered many times times afterwards and I am afraid too often taken advantage of.

The next covey was found in an adjoining field in some tall grass and a beauty it was. Both dogs stood handsomely and a trio of birds fell when the covey rose. Here we were joined by two other gentlemen; and not having dogs, they were also invited to take their turn as our dogs pointed. Hunting over this farm we passed over ground where no less than five coveys had been located besides those we did find and not a feather could we strike; it was rather warm, one dog, the Gordon, became sick and Belle was just recovering from a severe cut in one foot, so that having enough birds to give us a taste each it was decided to return home shortly after lunch and hunt another direction the next day we went after birds.

Wednesday had been appointed for a grand rabbit hunt in what was known as "Scrabble Woods." About three o'clock on the morning of that day, two gentlemen from some distance back in the country, drove up to our house and naturally when we found who they were it was an easy task to get up and join them about the stove. These were two brothers by the name of Henry and two better men never stepped in shoe leather. Full of fun, fond of hunting, especially Bre'r Rabbit, it did not take long to get acquainted and time flew until the hour arrived to start. It was something of a drive to get to our destination but it was well worth a longer drive.

Picture a piece of pines and scrub oak and rocks and general rough country, wild as though man was unknown, a stretch perhaps three miles long and half as wide, full of a picturesque kind of place called "sink holes," and the reader can get a sort of idea as to "Scrabble Woods." This was a notorious place for bunny and we struck enough trails to warrant the fact of game being there; but we were handicapped somewhat in having two of my pack with us, both straight-legged dogs and good samples of chain lightning; the other three were bassets and too slow where my dogs were too fast, so such rabbitts as were started were run into sink holes before a gun could do much damage.

Later in the day we got into a section where the dogs had a better chance and killed six before we took up for home. Inquiry at the place where we left our horses developed the fact that thirty-five rabbits had been killed in this woods the day before by a party from Martinsburg, which was some excuse for our bad luck; there being no law on rabbits in this county they are hunted from September to March, and only the numerous places of refuge save them from extermination.

Thursday my friend and I had it all to ourselves, our other friend being unable to get away from his business; his dog was quite sick so Belle was our only dependence, and nobly did she get down to her work. Our first point of departure was a large stubble where at least one covey was known to be, and Belle struck it almost before we were ready for it; we took five birds from this covey and while looking for stragglers the bitch roaded up to another which paid toll and dropped into a small woods; these were followed up and some found, but the large majority seemed to have evaporated. Taking to the field again to look up one bird marked down, we found another tremendous covey that also went to the woods, and then such sport as we had. The leaves were too dry to permit first-class work from the dog, but the amiable Doctor was a grand cover shot, and in such fast company he would be a chump who did not keep up his end. The result was a fine bag of some of the largest birds it has ever been my good fortune to see, and when we halted to rest and counted eighteen of these beauties it was moved and carried by unanimous vote to quit and go home; enough was as good as a feast.

Friday was a very warm day and men and dog played out very soon, the great feature of the morning being a point made by the bitch on a bird in a fodder shock, which we held until we tore the shock to pieces, the bird flushing when the last bundle of fodder was turned over, and being killed by a quick snap shot just as it curled over the nearby fence. Some may say she stood the foot track of the bird, but she never did stand such tracks, and it seems to me well worthy of record that such a staunch point was made in rank fodder on such a hot day.

Saturday was a *dies non* on account of rain, but the next Monday was an ideal day, though still warm, and on starting out both my companions gave me fair warning that they were after me and that it would be necessary for me to shoot like Dr. Carver to get in the game at all. One of these gentlemen being one of the best shots I have ever hunted with and the other by no means "a slouch," this was laying out a large-sized contract, but what matters the bag if the sport is good? Both dogs showed up this morning fit to run a race for money, and after drawing one or two promising fields blank both dropped to a grand covey that split as they rose, and flying high and wild finally crossed the road and dropped into a woods; from this covey we took six fine big fellows and leaving the remainder started across the same field from which we had flushed them, and here the blue bitch roaded up to another smaller covey, the black backing in great shape. We could not see just where they went but took the direction and soon began finding them in a rather thick clearing, and if the truth is told no one covered himself with glory. While we were working in this cover the tail end of a blizzard set in and such birds as were found in the open went off like rockets. Still we got one now and then until having an even dozen, and a storm seeming imminent our way was taken homeward and my vacation was over. The tale is not gory, no enormous bags were made, but the satisfaction of such hunting in company with royal good fellows, good dogs and a reasonable number of birds in a grand country is not that the *summum bonum* of sport?

So much for this vacation; if the reading of these words give some one who did not have an outing a little pleasure the object of the writer is fulfilled.

ELLICOTT CITY, Md SAMUEL J. FORT, M.D.

## UNCLE RUSTY AND OLD SILE.—I.

### A Backwoods Correspondence.

INTRODUCTORY NOTE.

I WAS fishing Marcy Brook late one afternoon in August. It was a gray day—and even at that altitude, intensely close. But the trout were feeding and I could not leave them, and so hurried on despite the hour and the approaching storm, even further up the brook to fish the flume.

Reaching the flume I became absorbed in casting, and was only awakened from my reverie by the water dripping from the edge of my old felt hat. I looked up between the walls of rock that closed in about me, and saw the black masses of clouds sailing past. Then a blinding flash of lightning, a crash of thunder, and down came the rain. I unjointed the rod and pushed into the woods.

Then it was that I realized I had fished too late. The position of the opposite peak told me my camp at the Upper Ausable was a good five miles below, and there was scarcely half an hour's daylight left. I must make the best of it. Suddenly there came another ugly flash—a crackle of thunder, and the rain fell in white sheets, through which the nearest trees glimmered like ghosts, their giant arms beating about them as the wind roared through the forest. Then I remembered a deserted trapper's shanty up a little brook that tumbled into the big stream a few yards above, and after floundering over a succession of wind slashes, I reached the brook, and just at dusk found the shanty.

It looked cheerless enough as it stood there half buried in a tangle of wild blackberries and fallen spruces.

Hedgehogs and the smaller rodents had played havoc with the dirt floor, burrowing under the logs, and the water streamed through two great cracks in the soggy bark roof. I succeeded in finding a dead stump, and soon had a rousing fire going in the dry corner of the cabin. After this things looked brighter, and even the old shell of a shanty seemed cosy. Before long the rain ceased, and a chipmunk, curious to fathom the mystery of the fire and my being there, scampered over the roof, shaking down little bits of bark as he ran. There are two things that I always try to keep in the pockets of my fishing clothes—one, plenty of matches wrapped in waterproof paper, and the other—salt. I went down to the brook and dressed my fish, and as I sat toasting myself before the blaze, there came stealing over me that feeling of satisfaction that only comes after a hard day's fishing, when you look back and remember the wet, and the time you tumbled and barked your shins, or how you lost your biggest fish, and as I gave a half-pounder a final turn over the coals, my eye caught a scrap of paper sticking out from between two logs close to the roof. It proved to be a bundle of letters, for the most part mouldy and water soaked, yet still legible. Upon examination one half were signed "Sile." These were in pencil, evidently labored scrawls preparatory to a final letter in ink, an operation that must have consumed a considerable amount of time. Those from Connecticut were carefully stowed away in their original envelopes bearing the following address:

Uncle Sile Prouty,
Deweyville,
Hamilton County,
New York.

Alone as I was, I need not tell you that old weather beaten package proved a godsend.

I shall never forget my delight as I read letter after letter. They must have belonged to an old trapper named Prouty who once lived in Deweyville—dead these twenty years? Those who knew him, I am told, said he was a queer character, and that he spent most of his days in the woods alone with his dog "Drive," hunting and trapping. To this boon companion he would talk for hours at a time, as they wandered together far back to some forgotten pond after some wary old buck, or followed a brook a-fishing throughout the long drowsy day as it flashed and chattered along in the warm sunlight. To return at dusk to their shanty at Little Otter Pond and over the embers discuss the day—for so long had they been alone together that to the old trapper the dog too had a language. Isreal Lukens when a boy remembered seeing old Sile—his hair grew over his ears in straight bunches and reached an inch or so below the collar of his coat, and under his mink skin cap, which he invariably wore, his keen gray eyes illumined a face full of good humor and seamed by exposure. Often he would come out of the woods and return to his cabin in the settlement. Then after a period of domesticity, longing for adventure and the hardships of a trapper's life, he would suddenly leave his home and, taking his dog with him, bury himself in the wilderness for months. There was a story that he once had a partner, that they had been boys together in these mountains, but that later in life his partner had settled in Connecticut.

That eventful night in the cabin has lingered long in my memory, and the curious correspondence I have always kept, and give it to you word for word.

F. BERKELEY SMITH.

### Sile's Letter to Uncle Rusty.

When I come to think you never been to my shanty—er stopped even over night, it actily sets m' blood a bilin—makes me mad, ez the feller said.

I thought you'd be along this winter, an' me an' my dog old Drive used to go up to th' top er thet pine knoll thet sets offum to one side th' pon' en wait fer ye. The dog said he see ye once, but you wuz too fur off to yell to. I mistrusted yew'd sheered off too much to th' east to find my shanty, but th' dog said arter a month er so when we used to set up nights discussin' it thet arter all he b'lieved it wan't you he see, an' 'lowed he wuz gittin blind an' thet he warn't no good no more, an' that he cudn't see a deer ez fur off ez he used to by a durn sight, en thet he warn't wuth his keep, an' thet I'd better drive him off.

Goll, I felt sorry for the cuss, he took it so bad. Then he owned up, tellin' me that when he see I felt so lonesum en disapp'inted at yer not comin', that he'd be daddinged ef he could hold aout any longer an' see me so miserabul—so he jes riz his ears an' made aout you wuz er comin' an' thet he see ye, an' thet there warn't time to let ye know. Arter thet I used to tend my traps an' cut some timber, an' go home an' set over my mink cakes an' milk gravy an' mope. The dog said it wuz the fust time he ever see me lose my grip. Goll, he said it wuz pitiful to see me. Then I begun to git peaked—bimeby I got so peaked an' puny it wuz all I could do to git raound an' tend what traps I hed sot back er the shanty. The dog he'd turn to en help me git the hides off 'em, an' when

he'd see I wuz clean beat, then he'd say: "Thar; you'd better git back inter yer blankit, I'll tend to th' varmints," an' he'd hev brekfust cooked an' the sapil bait cut up fore he'd wake me.

But graddily I got my nerve, an' neow I'm stouter en er bull moose. I wuz thinkin' t'other day I haint hed the shield of my shirt on sence thet blizzard—must have forgot it one mornin' an' there warn't time to go back an' git it, an' I haint needed it sence.

The dog says he feels the cold wus in the fore part er March 'an he does the rest the hull year. But I tell him he runs too fast en sweats so en then lays daown in the brook—he 's so dum reckliss. I tell him I'd better fix up sum spider-wort en elder en steep it fur him. He said t'other day he presaumed likely he'd better take some, en guessed he would.

Dang yer ole hide, why aint ye writ afore?

'T want a night et passed but what I'd kinder slink away frum the store julluk ole Drive does when he's flamflusiled inter a traout hole ahead er ye.

"Why Sile," Mandy ed say, "you needn't take on so—like ez not he's been so bizy he haint hed time to write—why how you take it. Eny one ed think you'd er lost er coupil of caows ter luk et yer caountenince—what's the use er worryin' baout it? Like ez not he's rit ye an' it haint come."

"No," sez I, "ef he's rit I'd er hed it 'fore this—United States mail don't lie," sez I, an' then I'd git tew thinkin' 'bout ye 'n feared suthin' happined to ye. Thinks I, ef I don't git er letter 'fore I git to ciderin' I'll git my blankit an' er snack to eat en go off en find ye, ef the ole man hez to travil clean to Otter Medder. En I hedn't more 'n said it when daown come Bill Patridge en sez, "Eke sez thars a letter fer ye come in to-night's mail."

"Why how you talk," says I, en I reached fer my tippet en drawed on m' boots en started fer Munseys.

"Fer the land's sake, Silas Praouty, where air you a-goin' er nite luk this," yelled Mandy.

"Don't stop me," sez I. "The ole cuss hez rit. The ole cuss hez rit jes' ez I knowed he would, mos' likely he's broke his laig, er cuddent git to th' settlemint 'caount th' snow er he'd rit 'fore this. Don't stop me," sez I en aout I went en tramped it through four foot er snow to Munseys, en thare lay yer welcome wad ez neat's er piney in er leetle box over th' caounter, with th' ole lamp throwin' er pinky glow over its side with thet same handwriten I knowed ez well's I do them there mount'ins—kinder laffin et me en slanted so's I c'u'd jes' read it:

Uncle Silas Prouty,
Otterville,
Hamilton County,
New York.

Ike come about er week ago an' wanted we should go over to the dance to Hervey Dewey's. Why, you know where Dewey's folks live, don't ye? Leetle red house sets off the road through the notch 'fore ye git to the sawmill?

Goll, sez I, I'll go ye, says I. Ef you'll git your team, says I, ye may hev my sleigh, en 'twa'n't en haour 'fore we wuz hitched up an' peoundin' it fer Dewey's. Mandy, she didn't want to go at fust—sed she felt she'd orter clean up a bit, an' she'd ben meanin' to put daown sum pork to soak an' get at her quiltin', seem's though she'd put it off so long, but I told her, Si, I wuz bound to go an' thet I wa'n't goin' to miss thet dance fer no sech things ez them, an' Ike, he sed 'twarn't no use er backin' out now long ez we wuz hitched up, an' ole Drive, he kept boundin' about so when I told him he c'u'd go thet 'fore she knowed it we hed the ole womern bundled in, en wuz p'intin' fer Deweys.

Wall, sir, we hed some fun, ez the feller sed. Haint seen no sech times sence old Israel Lukins kitchin tonk, en thet wuz moren twenty years ago. Swan ef thare want moren er dozen come out when we got there to help onhitch our team, an' thet took most er quart, en et wuz one er them awful cold nites, too, with th' moon shinin' over Peaked Meountain. No, sir, there warnt no use en disguizin' it, ez the feller sed—wot was drinked was drinked. 'Twant ez ef et was one er them pizin black nites thet er feller didn't hev to go forty foot back in th' woodshed fer er hooker. Made er feller feel like ole times to see how them coon skins wuz piled up in thet leetle back room thet sets off um the kitchin, looked julluk the inside uv er trappin' shanty. 'Twant er gre't while 'fore Ed an' Bill Sanders b'gun to git out their rosum en tune up. Net, she come up to me en sed she'd show me whar Herve kep' his barril uv cider ef me en Ike ed roll her in. So 'twant er minit 'fore we hed thet hull barril standin' to one side th' fiddlers. Herve, he see it, an' kinder laffed, an' when he see Net an' sum er them Skinner gals bringin' out the doughnuts an' the dipper, "Goll," he sez, "yew kin go it," sez he—an' we done so. Ed, he slung inter the Money Musk, an' 'twant er minit 'fore we wuz dancin' luk mad.

Salute yer pardner—an' ladies' chain an' allemand left an' allemand right—an' doz er do an' gents in th' middil an' grand right an' left—an' swing yer own the last chance—an' lady raound gent en' gent raound lady—an' take your pardner by the hand. Balance down the middil, then swing yer pardner round the waist. Pop—goes—the weazil! First coupil for'ard an' back—second coupil lead to the right—balence—grand right en left—balence to yer corners—grand promenade—right en left all around—an' to yure seats. Haw! haw! haw! Wall, sir, et beat all. Ike sed it wuz the cider 'et done it, but I mistrusted, en' I looked 'crost en see Charlie Munsey chock full, eyes stuck out. "Why, I swan ef et haint Mr. Prouty," sez he. "How goes it?" sez he, perlite ez Cuffy. "To yure liberty," sez he, haulin' a bottle out from his shirt—an' then he begun to tell me how him en' Gus Skinner fetched over a coupil uv quarts frum the shanty, en' dumped the hull of it into the cider.

Haw! haw! haw! Goll, them are two awful fellers to make fun. Comical? Goll, I guess they be. Maybe you don't recollect the time they come down to the settlement one Sunday mornin'. There wuz one er them black beeches that set out 'fore the meetin' house, both on 'em full ez minks; Ed, he got er rope en' acted it aout; he wuz one er them performin' b'ars, Charlie he'd hold the rope an' sing one er them French songs er his'n, an' Ed, he'd clim' the tree. Wall, sir, et wuz er comical sight, no use talkin'. Thar wuz more'n er dozen ronnd 'em, en' you'd orter seen them fellers roll about er-laffin' et them fellers perform. Ed, he'd clim' the tree clean to the top an' squeal julluk er b'ar, en then Charlie, he'd yank the rope, an' then Ed, he'd climb down ag'in en begin to dance.

You recclect that yaller house cat of ourn, don't ye? Why yas ye do, to! See her when she wuz er kitten, I'll warrant ye. Wall, she turned out to be the awfullest deer cat you ever see. Never see the beat. All we'd 'ave to do ef we wantid to git er deer—Brother Bill, he'd go down en watch et Moose Pond on Sand Pint, an' I'd go up back on thet ole Windfall Mount'in, an' that house cat ed foller back er me julluk er hound. Never see nuthin et luved tew hunt ez thet critter did. She'd trot rite er long till she'd come onto er fresh track, an' then you'd see her straightin thet yaller tail er hern up into the air, en she'd begin to yaowl, en twant er minit fore she'd be er poundin' et straight fer the Pond—Goll, how she'd squall.

Brother Bill wuz er tellin' me baout the time he killed that five prong buck last fall. Wall, sir, he said thet deer come into the pond kersaouse ez ef thar wuz a fast runnin' hound arter it. Wall, sir, he sed he didn't hear no dog, en preddy soon he heerd the goll dingdest yowlin' t'other side the pond, an' he heerd suthin commin luk lightnin' through the woods, an' out come thet house cat rite whar thet buck come in with her back humped en her tail biggern er stove pipe, en yowlin' fer all she was wuth. Goll, Bill sed 'twas comical to see her walk raound thet buck en purr when he wuz dressin' him out. Thar! Thars Mandy hollerin' fer me now. We've burnt an awful site er wood this winter, take it when the wind's about east, an et beats all how thet stove'll eat her up.

The ole dog sends his respects. He wantid, I should ask ye ef ye reclected that doe he druv to ye four year ago las' fall. He sez he want three rod behind her an' see ye when ye shoot. Sez thet ball struck clean in under her. I goll, he sez you made her think thet p'tickler secshun wuz inhabtid—sez you'd orter see her plough out er thar crost them narrers by that big rock.

Yures faithful, SILE.

## NEW ORLEANS.

*[From our Staff Correspondent.]*

NEW ORLEANS, Dec. 14.—Gentle reader, did you ever ponder over the immensity of a land wherein, on one side, the rigors of a midwinter climate are in action, and on the other are the clear sunshine and balmy warmth of summer? Yet such is the land of the American eagle, one of whose wings hovers over snow and frost, while the other is in roses and sunshine. By reversing his position, he can warm or cool his wings at pleasure.

In early October, about the time of the Huron coursing meet, cheerless skies, strong, chilling winds, heavy frosts and a leaden landscape, forerunners of approaching winter, were already unpleasantly in evidence, and heavy winter coats were in use.

A trip to Chicago in early October left the cold weather behind but pursuing. A further trip a bit southward and much eastward, via that gentle little town, Bicknell, Ind., landed the writer in that State of pleasant climate, namely, North Carolina, but still the dead leaves on the trees, dead vegetation and heavy frosts showed a mild imprint of winter forces. After the field trials at Newton, N. C., a flight still further southward to Atlanta, thence to Birmingham, brought me into the outskirts of summer time. Thence southward to New Orleans was the next and last run of the trip, taken over the Queen & Crescent. The train ran through a country which was most inviting from a hunter's standpoint, a country of open field and woodland, with abundance of short cover for the birds; but one gets tired even watching good quail ground, and when night closed in it brought a feeling of relief. Having composed myself for a good night's sleep in my compartment of the Mann Boudoir car, with the quiet calmness and steadiness which are said to come from a clear conscience, but which, I have observed, come best from no conscience at all, I heard a buzzing, gently buzzing near my chamber door. The buzz drew nearer, with its delicately shaded crescendo and diminuendo frightfulness many times repeated. Could it be a mosquito in December? Only that and several more. When a mosquito catches a fat Northern man, he knows a good thing and pushes his bill.

In the morning I peeped out under the curtains of the car window, and beheld the evidences of a semi-tropical land—trees laden heavily with Spanish moss, big green water oaks and magnolias, strange plants of luxurious growth; gardens full of green vegetables growing in safety from frost; negro children barefoot and scantily clad, and the costumes of their elders were still more *negligé* and ancient; the homes were constructed with a view to give the breezes all the liberties, and thereto the doors and windows were all open; there were no wood piles in sight; in short, everything denoted a land wherein the climate was of permanent mildness.

The morning of my arrival was as mellow and clear as a northern June day. As the sun mounted higher, however, the temperature became uncomfortably warm.

The drought has asserted itself in this extremely Southern section, though it came at a later period than in the Northwest, where the rainless weeks had dried up the sloughs, small lakes and streams, and marked the surface of the dry land with deep, checkered seams.

For many weeks here, beginning about the middle of last September, the drought has prevailed, with no break of importance to lessen its parching effects. Last Sunday and Tuesday there was some rain, though not enough to do much good. Still, the downpour on Tuesday was heavy while it lasted, the gutters being filled to furious overflowing, while the air was disturbed with thunder crashes and the sky marked by heavy lines of lightning, yet I was assured it was but a mere shower.

In consequence of the drought with the resultant dry marshes and low water, duck and snipe shooting is comparatively poor, being far inferior to that of the average year. The bayous and smaller lakes are very low, while some of the smaller ones are quite dried up. The warm weather also keeps the ducks further to the northward. With all the disadvantages a great many ducks are killed nevertheless. In the French market last Monday there were many thousand pair of ducks which represented the supply for that day's sales, and they were sold at thirty cents per pair, the warm weather forcing quick sales at cheap prices. With the sales in the other markets and by other dealers, the total sales for each day must be enormous.

No one in the North who has not given the subject special study, realizes the enormous quantities of game killed in the South during the winter months. Hundreds of men are employed on a salary to shoot for market by business firms in New Orleans. One dealer told me that he had bought, at one order, $850 worth of ammunition to distribute among his 150 market-shooters, but owing to the unfavorable conditions he had not got much over $50 in return so far.

A favorite duck ground is the Bayou des Allemands, about forty miles west of the city on the Morgan Railroad. This bayou runs through thousands of acres of marsh and connects with lakes which form links in the chain to the Gulf of Mexico. The numbers of ducks shipped from that section is enormous, as it is worked constantly both for sport and pleasure. One gentleman, whose knowledge and veracity are above question, assured me that in past years he has known of upward of 100 baskets of ducks to be shipped from one point in that section, and as each basket averages about 100 ducks, the total is almost incredible.

Another gentleman told me of a big day wherein one man shipped as the result of three or four guns' work a total of 5,700 ducks. And yet it is said that there is no perceptible diminution of the ducks' numbers, nor do they forsake the grounds, which is attributed to the restriction to daylight shooting. The ducks are thus not disturbed at night. The test for the day's commencement at the earliest is when the shooter can read the time in the earliest morning by holding his watch about 24in. from his face.

But within the last two or three days the weather has turned cooler, though the same weather in the North would be considered mild and comfortable. From some sections the reports are more favorable.

Mr. A. J. Cardona, Jr., from New Iberia, La., under date of Dec. 13, writes me concerning the shooting as follows: "Snipe and ducks are in quantities in this section. The outlook for quail is the best yet. Cover is very thick and high, and will not permit of good shooting until the middle of January."

Mr. T. Anderson Jackson, Opelousas, La., writes me as follows: "The shooting is splendid, or will be a little later on, when the cover in the fields is destroyed by stock. I was out recently for the first time this season, and I was surprised at the great number of partridges. In about two hours I found at least a dozen large coveys of full grown birds, and I found a good many snipe. I only managed to bag ten quail and four snipe. I returned home for dinner because there was no water for the dogs."

Opelousas is about 160 miles west of this city.

Dog interests have sadly declined in New Orleans in the past few years. At one time, a few years ago, there were enough sportsmen who were interested in dogs to arrange and manage a field trial successfully, bringing into the competition the best dogs that the States could produce.

Mr. J. K. Renaud, at one time an indefatiguable worker in field trial interests, I found as busily engaged in adding up figures as a Chicago man, yet, unlike most business men in the North, he found time for cordial greetings and pleasant reminiscence. I was told that his fondness for practical sport afield had not diminished.

That urbane sportsman, Gen. F. F. Myles, whose name also is famous in the annals of field trials, and more famous in this State as an expert of phenomenal skill with rifle and shotgun, has lost much of his interest in field trials.

Said he, "I find that field trials entail a great amount of personal care and attention, and they are often associated with a great deal of annoyance. The benefit is to the trainer. If there is anything won he gets it. When there is a loss, that goes to the owner." There is something in those remarks which seems worth pondering over.

Gen. Myles still maintains his large kennel at Lafayette, La., at his shooting-box and preserve. By the way, the name shooting-box conveys no idea of the comforts and beauties of Gen. Myles's charming retreat. I was favored with an opportunity to enjoy the hospitalities of Gen. Myles at his shooting-box five or six years ago and the pleasant visit is still fresh in memory. I had the pleasure, too, of meeting Gen. Myles's brother, who is also an ardent sportsman.

I found that Mr. E. T. Manning, who was also an active field trial man some years ago, had lost none of his enthusiasm for dog and gun, though he was more indifferent concerning field trials. He is a perfect encyclopedia of information in respect to the game and fish resources of Louisiana.

Mr. H. L. Garland has moved from Opelousas to New Orleans, where he is now practicing law and promoting immigration into the State. About ten years ago he devoted most of his time to killing quail and snipe; afterward he studied law and graduated, and is now as deeply engrossed in business as he once was with field sport.

Deer are quite plentiful in some sections, mostly in the swamps, and are hounded when hunted. I was told that the rifle is seldom used in hunting them. The shotgun is the weapon used, the cover being so dense as to render the rifle impracticable.

The black bear is also quite numerous in some sections. A dispatch to one of the local papers, from Salmen, La., states that "A large black bear was killed in Honey Island Swamp to day by Mr. J. J. Willis, a prominent merchant of Pearl River station, La., who reports having seen several. This is the fourth bear killed recently in Honey Island Swamp and vicinity. The place is evidently thickly settled with these monsters." The "monsters" weigh from 150 to 300 pounds, and I always thought it a waste of ammunition to shoot at them. It is cheaper and quieter to walk calmly up to one, tie a shawl strap around him fore and aft, and thus carry him in one hand into camp. Placed beside one of the sky-scraping grizzlies of the Far West, the black bear of Louisiana is a mere babe. Who's afraid of bears!

Under date of Dec. 12, a local paper has a special from Houston, Texas, which with similar happenings goes to show that the fool killer is neglecting his business everywhere. It says: "A prominent merchant of Wharton was out hunting deer in company with a negro man named Mark Gordon, when a fawn jumped up between them. Gordon fired. Hearing a noise, and going in the direction, he discovered that he had shot the young man. He died in a few minutes." B. WATERS.

### But Now She Talks Differently.

FORT RANSOM, N. D., Dec. 15.—*Editor Forest and Stream:* Three years ago, when I first ordered FOREST AND STREAM, my wife said that I was foolish taking such a paper. Now things are changed. If for some cause or other I do not get the paper on the regular mail night, the first question asked is, "Where is FOREST AND STREAM; has it not come to-night? J. F. H.

# Camp-Fire Flickerings.

"That reminds me."

"Did I ever kill a grizzly bear?" said Capt. S——, of the —th U. S. Infantry, in answer to a question of mine, "no, but I once came very near it. I was then stationed in California, where game of almost any kind could be found within a few miles of the post. One morning I developed a keen appetite for trout, so rod in hand, I mounted my horse, and galloped off to a stream where they might be caught. I had fished down the current perhaps a mile and a half to a point where it took its course through a tangled network of willow; I did not like to go far into such a place, for I had no weapon of any kind about me. But a few yards below I saw a fine, deep pool, where I thought I could be sure of a good rise or two. The stream here narrowed rapidly, until it passed between two large rocks, just above the pool. There was only a strip of sand about a foot wide on which to pass the boulder. I stood and cast down into the pool two or three times, and then started on around the rock. Coming out on the other side, I found myself face to face with an enormous grizzly bear, which had evidently been asleep on the bank, for he was blinking in the sunshine; I had waked him up. I was frightened, for I hadn't lost any bear, and this one was a total stranger to me, besides, he was mad and ugly at having been disturbed. The old fellow sat up and sniffed once or twice, then heaved himself up to his feet, ready for business. He looked as big as the rock itself. There wasn't much time to deliberate. I couldn't run anywhere, and the bear was too near, and the rock too high for me to climb. I just dropped my rod, waved my arms, yelled once at the top of my voice, and threw myself headlong into the pool! It was 4 to 5ft. deep, and I took mighty good care to get to the bottom of it. The water was cold, and the first shock nearly paralyzed me; but I grasped a stone and held on for dear life. Ten, twenty, thirty seconds I stayed down. My ears began to sing, and my strength to fail, yet I did not dare to rise for breath; for I knew that the moment I showed my head, bruin would be in after me. I could not swim a stroke, so crossing the pool under water was out of the question. I knew that I must soon come to the surface or drown, and I actuallly deliberated a few moments, whether it was not best to drown myself right there, or rise and be killed by the grizzly. Suddenly I swallowed a little water and then it was settled for me. I tried to gasp, and involuntarily straightened up, half-strangled. My head just rose above the surface, and for a second or two, as I coughed and wheezed in the struggle for breath, I suffered an agony of suspense, expecting to be instantly seized by the bear. But I wasn't seized. Slowly I recovered breath and sight, and then looked round for Ephraim. He was nowhere to be seen. I didn't do any more trout fishing that day, but got back to my horse and put for home, half-frozen."

"But, captain," said I, "I thought you were going to tell me about—"

"Yes, yes," said he, "that's the point I am coming to. My frightful yell, and sudden disappearance, had probably scared the old fellow to death; and he doubtless was heeling it off through the chapparal as fast as his legs could carry him, all the time that I was down in the water, nearly drowned. That's the nearest that I ever came to killing a grizzly bear; and that's the nearest one ever came to killing me." D. F. Hall.

## MORE ABOUT FOXES IN TREES.

*Editor Forest and Stream:*

Having read with interest the several accounts of tree climbing by foxes, recently published in our family paper (and what a gentle family do the hunters and fishermen make), may I intrude upon your space to tell my little fox ory?

While hunting for quail with several friends in California many years ago, I was following up a slight ridge while one of our party was on another about 200yds. distant with an inclined flat between us with a few scattering white oak trees, the last of their species; for I never saw a sprout from stump or acorn. Looking across to the chapparal-covered ridge on which my friend was, I saw a fox come out of the bushes and trot briskly toward me. Stepping behind a tree I waited till I supposed he had approached within gunshot, when I stepped out, and as the fox squared away at right angles from the course he had been coming I gave him a charge of No. 8 shot. He made one long jump and striking the ground kicked and pawed a little and then lay quiet. My friend came out in sight on the other ridge and asked what I had shot at. I told him a fox, and held it up by the brush so that he might see it. My friend passed on out of sight and I let the fox drop, and he struck the ground as limp as a dish rag, and without any other *post mortem* examination I would have sworn he was dead.

Now, I don't think dead foxes often climb trees, but this one did. I began loading my gun, which was a muzzleloader, and had got the powder in and wadded, and discovering something wrong with my shot-pouch I took off the game bag, powder flask and shot-pouch to adjust the last. I had been fussing with it but a few minutes, when I discovered the fox about 20ft. away from me, running at a lively gait; of course I joined in the race, he for life and I for the fox. I could keep very near him, but not near enough to kick or strike him; after running about 200yds., he went into a clump of bushes perhaps 20ft. in diameter with a buckeye tree in the middle of it; I ran around the bushes to head the fox off or take up the chase on the opposite side, but he did not come out. Peering into the bushes gave me no sight of him, and I began thinking he had gone into the ground. Straightening up I happened to glance at the buckeye tree, and there 15ft. up was my fox quietly resting in a crotch of the tree. As I had yelled like an Indian in my race, my friend came running down to see what was the matter and reshot my fox so he did not climb any more trees. I have seen possums play dead, but this was the only fox I ever saw "play possum" and afterward climb a tree. A.

### The Ways of Birds of Prey.

Here in the Arkansas Valley, 100 miles from the mountains, bird life in the winter is not plentiful. Meadow larks, sparrows and hawks are the only birds whose company we can rely on during the winter. A pair of fly-catchers that raised two broods in the protection of our porch both this season and last are still with us, but their trunks are packed ready for the Southern flight. Red ants destroyed their last brood, when nearly ready to fly.

As everything is created for a beneficent purpose, I would like to know the mission upon earth of the great variety of hawks. When the grain is ripened and the bobolinks have flocked, the hawk picnic begins. Darting among the myriads of young birds they select whatever comes within the line of their flight. Often in terror a poor bird is impaled upon the barbs of a wire fence.

A few days since I saw a hawk pursuing a meadow lark, which seemed to realize that his safety lay in keeping above his pursuer. Steadily in his ungraceful flight the meadow lark ascended the heavens, the two birds holding about the same relative position until lost to view.

The other day I watched a curious performance by a bald-headed eagle and two hawks. The eagle was making a meal upon a jack-rabbit, but was annoyed by the presence of the hawks. Becoming exasperated at the near approach of the hawks, he would pursue one, while the other stepped up and helped himself to rabbit. On returning the eagle would pursue this one while the other took its place. Finally, becoming tired or disgusted, the eagle continued his meal with the hawks as interested spectators. F. T. Webber.

Colorado, Dec. 15.

### Another Tame Caribou.

Boston, Mass.—I have read the accounts of tame caribou in past issues of the Forest and Stream, and I think I can add to those stories by relating an experience of mine while summering in Labrador.

We were lying off the settlement of Hopedale, one of the most northerly parts of that dreary country. We had had great sport at deep-sea fishing, otter and walrus hunting. One morning we sighted at the extreme end of the bight an immense caribou quietly grazing on the herbs

THIEF RIVER FALLS MOOSE.

One one year old; the others five months.

*In the possession of the Minnesota Fish and Game Commission.*

and grass. We determined to bag him for dinner and accordingly put off a boat and pulled in his direction. Our intention was to get as near as possible and bring him down with our rifles. Somehow or other I told the others not to shoot till we were quite near.

When within about 100ft. of the animal we stopped rowing. The animal looked at us, and strange to say it did not seem in the least alarmed but kept grazing and gazing at us alternately. I had never seen a caribou so fearless before and I was curious to know if the beast was tame.

We got quite close to the animal, not ten feet from him; our keel almost touched the rocks. The animal gazed at us for a moment and slowly waded up to our boat. It thrust its nose into our "punt" and allowed us to pat it and fondle it. The caribou seemed as tame as any cow we had seen at home. I was loth to kill the animal and was considering the project of taking him to St. Johns when Bill raised his weapon and when not more than five feet from the caribou fired. The beast dropped like a log, shot through the heart. I was wroth at what I considered a most cowardly deed, but my words had no effect on the unfeeling slayer, and the only thing for us to do was to carry the caribou on board, which we did with much dispatch. M. W. Dooley.

### That Florida Rookery For Sale.

To all lovers of pretty plumed birds the almost total extinction of feathered beauties on the peninsula of Florida is a matter of deep regret; however, there is one true lover of nature left, a man who has a homestead near Citronelle, in Citrus county, on the Withlacoochee River, where he has a rookery which he has defended from the impious invasions of vandals. To that rookery thousands of birds go to roost every night during the season and are thus protected from so-called sportsmen. If Forest and Stream would interest itself in this matter it might induce some wealthy ornithologist to purchase the place and thus help to perpetuate the several varieties of plumed birds for which Florida was famous.—*Tampa Times.*

### Elk in Harness.

Exeter, Ont.—Mr. E. H. Fish of this town, has a novel team of drivers. They are a pair of elk, male and female. The female is now past two years and the male past one. The parents were captured near Brandon, Manitoba, and were shown throughout Ontario. The present team were bred in captivity. They are splendidly mated, equal in size and shapeliness. Both in good, fat condition. They are kept loose in a stable and are perfect pets. They are driven double and make a splendid team. They are becoming quite a pair of trotters, with light harness and a light cart fitting them perfectly. Our streets are now accustomed to them gliding by almost daily. J. A. R.

### Wild Pigeons.

Gravesend Beach.—Reading in your paper several items about wild pigeons I write you. In traveling on Long Island about four miles inland from Port Jefferson last September I saw twelve wild pigeons fly from feeding on the grounds into the trees. I observed them very closely, as they alighted close to me. They were not doves, but the genuine wild pigeons, so plentiful years back. J. B.

# Game Bag and Gun.

## AN ANTLERED MONARCH'S IGNOBLE END.

Lansing, Dec. 20.—The largest buck that I had seen in many years was strung up by the hindlegs in front of one of our meat markets early in November. When I looked at him and admired his great, big, glossy body, and his splendid developments and the best set of horns that I had laid my eyes on in many years, I could but regret his death, and think that such a noble fellow ought to have been spared. But we are all human, and I must confess that I would have gone a thousand miles —five hundred over the roughest corduroy in America, three hundred pretty nearly all the way up-hill, and two hundred on foot—and I would gladly have turned my pockets inside out when I got to my journey's end to have shot that fellow. His horns would have hung in my library as long as I had a library. He was a monarch of the woods, worth your life almost to look at when dead, and what a sight he must have been when he was himself and roaming in his native wilds. He was no more fit to eat than any strong musky old bull would have been, and he was so swelled up about the head and neck as to make those parts almost useless for mounting, but he was yet a beauty.

When I saw the buck I wanted to know something about him, and where he came from, and who was the lucky man who shot him. The butcher simply knew that he came by express, that he weighed something over 200lbs. when dressed, and that he had a market value of about $30 net. The head and horns had been reserved, but he would cut up the body on Saturday and offer the venison for sale. Such an ignoble ending of life, for such a buck, was indeed a pity. He ought to have been mounted entire, when he would have been worth half a thousand dollars in gold and have been an ornament to any collection in this country. Failing to get from the butcher any trace of the man who shot the buck, I gave up the search. But constant visions of the big fellow and his elegant horns would come before me and I took the somewhat cold trail again.

At the post office I could get no clue of the hunter who had killed the deer. The city directory was way off, but finally through the efforts of Mr. Walker, of our carrier force, he located him, and in response to my letter of invitation he called at my office. I gave him a warm reception. He introduced himself as David Ayres, and kindly told me something of himself and of his hunting experience. He is an exceedingly pleasant gentleman of about thirty-five, slight built but nervous and cordy from head to foot. He is a born hunter, as was his father before him. He is a first-class rifle shot, and with his .38-38-180 Winchester has no trouble in bringing down anything that he can find in the woods. He has camped out for nine seasons and has killed a great many deer. This season he went out to trap, but he did not get located to suit and so gave up trapping and took in a few deer. The big buck was the cream of the lot, but a bigger buck with larger horns got away with a broken leg owing to a fall of snow which made it impossible to track it.

Mr. Alfred Bonner was his hunting companion. They had 40 traps and one huge trap of 24lbs. weight, especially for bear. Wolves and bobtail cats were reported quite plenty, but when he got where they were, they were not there. He left part of his traps with an old hunter up north, and will try his luck after bear again in the latter part of the winter, when the fur is long and fine and more valuable than early in the season. Three does, a couple of fawns and the big buck completed his bag of game killed. He reports that other hunters were killing about the same proportion of does and bucks, and that when a doe was shot, usually a fawn and a yearling were shot at the same time, as they 'most always remained together during the winter, and offered easy shots. In that way a whole family would be wiped out.

Hundreds of does and fawns were killed in northern Michigan before the season opened, and at any time during the year when a settler or a lumber camp wanted meat. It is one of the unwritten laws of that country, that no man squeals on his neighbor, and all take their meat from the same barrel. Trout are taken at any time and in any way that they can be got hold of. Last week I heard of a big basket of trout being sent to our city from one of the up-country towns, supposably blown out of the water with a bomb.

I regretted to learn from Mr. Ayres that he had disposed of the big horns and head of the old buck to the butcher for a song almost and that he did not appreciate what a prize he had really lost. There were a great many partridge hunters in the section where he camped, professionals, and one man had shipped out about fifty dozen birds. The birds were getting scarce compared with what there were three or four yeara ago, and deer were disappearing rapidly from the section where he used to find them plenty.

The experience of Mr. Ayres adds one more evidence to the importance of preserving the does and fawns and prohibiting the sale of game. Most of the men who hunt deer do so for the money that they can make out of it and the pleasure that they can find in hunting. Very few deer hunters but expect to sell enough deer to pay expenses. It seems to be considered among the hunters a perfectly legitimate way of doing. A few years ago I knew af several pair of horns in the hands of butchers, who had them hung up in the barn or some out of the way place and would be glad to dispose of them at a nominal price. If any reader of Forest and Stream would like a pair and will send me his address I will try to get him what he wants and all it will cost him on my part is the trouble of writing.

Last week I had a very pleasant visit with Mr. C. H.

Rulison, of Naples, N. Y. He has been in the woods of Michigan each season for about fifteen years. He is a deer hunter and a great rifle shot, and has used the .32cal. for nearly ten years, with satisfaction. He wants the meat, and the small caliber does not injure the meat as much as a large caliber. He and his party shot seven deer this season, mostly doe and fawns. He begins his hunting in upper Michigan, and when the season closes there he comes into the lower country, and gets another pull at the deer. This is a custom followed by many deer hunters in Michigan, and by most professionals who come into our State from other States. Mr. Lewis, of Lansing, has been the hunting partner of Mr. Rulison for many years. But death closed the hunting experience of Mr. Lewis last summer, and as Mr. Rulison never takes kindly to new things or strange people, he seems to be lost and unsettled about his future hunting trips.

One point, however, he never gets rattled about, and that is—his rifle sights. He uses the Lyman patent ivory hunting front sight and the Lyman patent folding leaf rear sight. He likes the folding sight very much, and he uses the bar part of the sight altogether. The crotch part of the sight he has no use for. The combination Lyman sight is not to be placed in the same class with the folding sight, according to his notion. He is, like all old hunters, something of a crank on guns and sights and shooting; but as he is governed entirely in his choice by many years of successful hunting experience, he is justly entitled to his opinion. The man behind the gun is the part of the apparatus that he bets on regardless of guns or sights. One shot is about all that a deer needs to settle him when Mr. Rulison steers the projectile.

One thing I noticed in his experience this year, and the same thing has happened for some years past, and that is, that the great majority of deer killed were does and fawns. If there is any argument needed to induce our Legislature to enact a law protecting does and fawns, it is just this fact. Every market in our city handles deer, quail, partridge, rabbits, and every bird or animal that can by any possible way be classed as game. With two exceptions, all deer that I have seen offered for sale this season have been does. Every hunter knows well what the slaughter of so many does will do toward wiping out the deer in Michigan.

Very little of the game that is purchased here is sold in our home markets, but ultimately it finds its way to some cold storage establishment. To prohibit the sale of game, and strictly adhere to the non-export law, is the only way to prevent a speedy, almost total annihilation of game in Michigan. One more quite as important matter is shooting of duck from steam launches. Humiliating as the fact may be, our most excellent deputy game warden, Mr. J. E. Nichols, an accomplished attorney, has stood with folded hands and blood in his eye, and had continued positive evidence that hunting parties were following ducks, day after day, on the waters of our home inland lakes, with all of the tireless energy that a stern propeller steam launch could bring to bear—with no law against it in Michigan. JULIAN.

## DUCKS ON BROADWATER BAY.

PERHAPS it will be of interest to readers of your valuable paper who reside in this vicinity to learn where good duck shooting may be had for a small outlay. The writer's experience on one of his trips will give an idea of what may be expected and the necessary expense for such an outing.

The Saturday before Thanksgiving Day, 1893, a party of four, including myself, with all the necessary "traps" for a few days' shooting, left Philadelphia at 11:16 P. M. on the Philadelphia & Norfolk R. R., for Nassawadox, Va. Although there was a sleeping car attached to the train we preferred the "smoker," where we could smoke, "talk duck shooting" or doze as we felt inclined. Nassawadox station was reached a little after 5 on Sunday morning, where we found a man with a double team in readiness to take us over to Marionville, a distance of four miles. At this point we were met by "Captain Bill" Taylor in his little sailboat, who transferred us down a creek some two miles to O. F. Taylor's house, which is situated on the shore of Broadwater Bay.

While on the boat Capt. Bill called out, "There is a flock of brant." I looked about the sky, but failed to locate them, and told him so. "Well," said he, "do you see the long, narrow cloud off there toward Hog Island?" "O, yes, of course," I respond. "Well, them's brant."

We reached Mr. Taylor's hospitable roof at 7 o'clock, ready and willing to partake of a hearty breakfast.

Sunday was spent quietly, turning in early in order to be ready for the early morning start. By 5 o'clock Monday we were suddenly awakened by loud raps upon our door and the order, "Get ready for breakfast." Before 7 we were in the boats and on our way to the blinds, O. F. Taylor taking two with him and an assistant the other two.

Each man carried a gun. An assortment of shells ranging from No. 1 to No. 4, were put in a box and placed in the middle of the boat where it could be easily reached by all. The blinds are scattered about in the bay about one-third of a mile apart and are built of small fir trees driven into the mud. These are arranged somewhat like a horseshoe and the boat is propelled into it and thus shaded from view.

At low tide one can wade about with hip boots on and pick up the "cripples," and the gunner can stand in the boat without fear of being seen over the blind, but at high tide he must study to learn how to get himself under cover. Sometimes the three men (especially if they are long) get a good deal tangled in the bottom of the boat, having been obliged to occupy a space intended for but one.

Wild celery grows abundantly about, affording excellent feeding for the fowl, and they were there in immense numbers. A good shot need not fear of a thin game bag. We had hardly placed our decoys out and pulled into the blind when we could see them about us. The word "lay low, they are coming" was often spoken, and many a broadbill, black duck, redhead and brant made the fatal mistake of settling to the decoys.

Capt. Bill would sail about in the outer edge of the bay and drive the birds into the gunners even without putting them to flight. I have seen him drive a flock of brant for several miles without getting them to leave the water, by careful tacking forward and back two or three gunshots off. We remained with Mr. Taylor until Wednesday night, having three days' grand sport and brought home with us 174 ducks.

We have taken this trip several seasons and have never been disappointed in getting game or in being well treated. The 8th of December next is our date for this year when we expect the usual good time. The expense from Philadelphia for a four days' trip including car fare, board, guide and incidentals need not exceed $25.

A. J. MARSTON.

PHILADELPHIA, Pa.

## THE ADIRONDACK DEER.

NEW YORK, Dec. 18.—*Editor Forest and Stream:* We agree so well on all sporting matters except the question of hounding in the Adirondacks, and we are so far apart on that question, that I take advantage of your offer to open your columns for a discussion.

I take it that what we both want is a law which will furnish the maximum of sport, be easy to enforce and insure that there shall always be as many deer in the woods as the country will feed.

I have spent a month or two in the Adirondacks every summer for the past fourteen years and have done more or less deer hunting each year. I have had experience of the law in all its various stages and am inclined to think the present deer law of the State a great improvement over anything that has preceded it, and I am very confident that for the last three or four years the deer have been increasing very rapidly. This I attribute to the provision against transportation, which practically prevents hunting for market. I think, however, that the close season ought to last until the end of August. I believe that a few fawns starve and a great deal of meat is spoiled as a result of August hunting. From Sept. 1 until still-hunting begins I would allow hounding, and after that still-hunting only, and I would not allow the killing of deer except by hounding or still-hunting at any time.

Every hunter has known wounded deer to travel long distances before they dropped. I have now in my pocket a bullet which was flattened in breaking a deer's rib, then went through the heart, completely pulverizing the lower half of it, and lodged under the skin on the other side. The deer, a buck weighing less than 200lbs., with this and two other mortal wounds, traveled over an eighth of a mile before he fell, and the underbrush being thick and his bleeding being almost altogether internal he would never have been found except for the dog. This was in broad daylight, and it will be readily seen that a deer wounded at night may very easily be fatally injured and yet be found only by accident.

It is not uncommon after the jacking season to find dead deer in the woods near a lake. I believe that counting such cases and counting the meat spoiled in warm weather, half the deer killed in August are wasted. In hounding, on the other hand, it is practically certain that a deer will either escape altogether or will be killed and carried home; and it is also reasonably certain that a party of good hunters can safely go into the woods relying on the chase for their meat supply, which they cannot count on before the middle of October by still-hunting, nor often in September by jacking. The latter process means the killing of perhaps two deer for every one hung up.

The greatest need of the greatest number seems to require that deer hunting should be obtainable at a season when the hard-worked business or professional man can go into the woods, and that means that there must be hounding in September.

A really "sportsmanlike" way of killing deer is hard to find. The fault is really with the deer. He is such a meek and inoffensive creature that anybody can kill him if they can get near enough. I have known of deer being killed with clubs on land as well as in water. And I have seen much hunting on runways and small lakes where the deer had a better chance for his life than he often gets in still-hunting. There are men who ought not to be allowed to hunt deer at all, and their hoggishness shows itself in hounding just as it does in jacking or trout fishing, or anywhere else; but it seems hardly fair that the whole community should suffer on their account. If hounding is prohibited those "game hogs" are the very men who still kill their deer with traps or salt licks, and the guides of the same type will have each spring a large collection of hides, but the pleasure of the honest sportsman and the revenue of the honest guide will be cut off.

In this connection I want to emphatically indorse your correspondent of a few weeks ago, who said that in Hamilton and Herkimer counties the game law was useful merely to lend an additional spice to hunting out of season. The remark is erroneous only in its limitation to two counties. What the Adirondacks need is a game police under a responsible central management with a backbone. That would be worth more than any number of amendments to the game law. HERBERT M. LLOYD.

*Editor Forest and Stream:*

Your editorial on "The Water-Killing of Deer" in your issue of Dec. 15 has opened a subject which should bring you many instructive letters on the Adirondack deer question. It is also a subject which has interested me greatly for the past ten or twelve years, and the few facts that I shall give you came under my personal observation.

I am strongly opposed to water-killing, (1) because it has tended to decrease the deer supply, (2) it is unsportsmanlike and (3) because venison obtained that way is often almost ruined on account of the fierce beating race the animal has run before it plunges into the icy water of a lake.

To satisfy myself whether there were more deer killed by hounding or jack shooting in 1887 I made a special study of the subject. To my surprise, more deer were killed in the first four days of hounding, which in the part of the Adirondacks I was in means "water-killing," than in the preceeding fifteen days of jack-shooting and still-hunting. In the first fifteen days of hounding there were six deer killed by that method to one by any other way in the first thirty days of the hunting season. Other years have shown about the same result, but in 1887 I kept a careful record.

A few years ago I was one day with my father rowing up one of the Fulton Chain lakes. We heard the baying of hounds and saw a doe come bounding into the water. It started to swim across the lake, when two boats put out after it. In one of the boats was a guide by the name, I think, of Jones, in the other a prominent clergyman from one of our Western cities, with his daughter, a girl of perhaps sixteen years of age. Both boats were rowed up to within a few feet of the doe; we heard the clergyman and his guide talking and wondered why they did not shoot. The poor frightened doe swam up near our boat, when the guide suddenly rowed up to it, took hold of its tail, lifted it slightly out of the water and jabbed a large salmon hook into it. It was allowed to swim off a few feet, the guide paying out the line. Then he shot it and as its head sank into the water I heard the girl laugh. I shall never forget that laugh, which to me sounded as though coming from a demon. And yet her father, who permitted his guide to commit this crime against humanity and sport, considers himself a sportsman and, perhaps, a Christain gentleman. Yet to some people this is nothing, and it has been done time and time again in the Adirondacks.

On another occasion I saw a doe driven into the water. A boat was rowed after it and it was driven to within two or three rods of an island. A young girl was there waiting for it. She was excited and fired no less than 25 shots. When it would get out of range her father, who was in the boat, would drive it back to the island, and the bombardment would commence again. After the girl had exhausted all her cartridges her father "tailed" it and did the butchering himself. Such scenes have so disgusted me that I have stopped going to the Adirondacks, although I am passionately fond of hunting.

In 1880 when I made my first trip to Brown's Tract, deer were plentiful. Since then their numbers have steadily diminished. To be sure, some of the guides and hotel keepers greet you year after year with, "Deer were never as thick as they are to-day." If it is so they don't travel around now, for where it used to be no trouble at all to get deer by still-hunting or jacking, now it is necessary to have hounds to drive them out. In localities they may be increasing, for example, on the property of the Adirondack League Club, Adirondack Reserve and other large parks where hunting is restricted.

Look at Maine; deer are increasing there. Why? Because hounding was stopped by law, and where hounding is stopped, so is the brutal, unsportsmanlike "water-killing." Some men are too lazy to hunt for the deer themselves. They prefer to have some one else do the work and thinking for them. They simply want to kill. By what means they care not. Stop hounding, and teach men to be sportsmen. They will then have to learn, or else give up shooting, and few who have had a taste of it will do that. PERCIVAL CHRYSTIE.

HIGH BRIDGE, N. J.

BINGHAMTON, N. Y., Dec. 14.—*Editor Forest and Stream:* I understand that there is a movement on foot to pass a law this winter making it illegal to use dogs at any season of the year in the pursuit of deer. Permit me to add my voice to that of many other sportsmen in favor of such a measure, knowing something of the methods and results of several parties who went into the North Woods this year during the hounding season. I must say, it seems to me more like butchery than sportsmanship. Why not follow the lead of St. Lawrence county in this matter?

W. G. T.

## WANTON DESTRUCTION OF GAME.

*Editor Forest and Stream:*

Your Dec. 15 issue speaks of the wanton butchery of a number of bull elk whose flesh was left to rot on the ground. The perpetrators of this alleged outrage were a party of Germans, camped eighteen months ago, on Atlantic Creek, Wyoming, south of Yellowstone Park. I was in that vicinity two months during the fall of 1893 and met the members of the party in question. I have strong reasons for believing that the story of their wholesale slaughter is erroneous, and is based only on the fairy tales of the shooters, themselves, and furthermore I was credibly informed at the time that they did not kill even one head of big game.

All game is rapidly disappearing in most localities in our country, and seems destined to follow the bison, wild pigeon and salmon. So far as my observation goes only a small percentage of the destruction is due to men who shoot for pleasure, be they native or foreign sportsmen. The market-hunter, the man who shoots for profit, is the great exterminator. The future of game conservation in our country, if it has a future, will, in my opinion, depend upon public and private preserves, and the clearly established right of the landowner to all game in season, on his own premises, with severe penalties enacted and enforced against trespassing, poaching, so called. Public opinion does not favor such regulation at present, and the trend of legislation is in the opposite direction.

Doubtless there has been, is, and will be much wanton destruction of game by alleged sportsmen. In America, game laws are seldom enforced and little regarded, and the compensation of wardens is not sufficient to invariably secure the services of competent men. On several occasions, viewing evidence of brutal wanton slaughter, I have been in perfect accord with the sentiments so well expressed by your correspondent. Some autumns ago, canoeing on a little known northern river, seldom traveled except by long-haired, painted Indians, and occasional explorers for ore or timber, during a long trip, I saw many signs of much useless killing, and in one favorable summer game country, I counted in four days paddling on the main stream and tributaries, the rotten carcasses of eleven moose, all cows and calves save one, none of them were skinned, and so far as I or my Indians could judge, none of the meat taken for use. In such a remote place no one could form an idea as to who was the butcher. Probably two explorers drifting silently in their canoe, and shooting mothers and calves in the edges of the stream, where they were seeking refuge from mosquitoes and flies. How many wounded escaped to die in the forest and infect the air beyond the range of human scent? It was not Indian work, for there was no sign of a permanent encampment, and food is too scare and too valuable for the Indian to waste, and the instinct of a market-hunter would scarcely permit him to kill game with no possibility of a market.

EDWARD E. FLINT.

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

## TEXAS AND THE SOUTHWEST.

### Blood on the Moon.

San Antonio, Dec. 20.—When the San Antonio Gun Club purchased their beautiful grounds on the borders of the limpid waters of Elmendorf Lake, there was inscribed on the deed that passed the legend: "Privilege of fishing and shooting on Elmendorf Lake." Everything went as merry as a marriage bell until Micheljohn's discovery of black bass. Great finny monsters of the fresh-water depths were jerked out of their watery heaven and ere many moons had filled up and gone a score of frying-pans in San Antonio were doing a lucrative business. The black bass were also done—brown, and there settled upon the happy homes of the gun club membership a feeling of sweet repose such as is superinduced by a full stomach and a satisfied appetite.

But alas! Peace was not long-lived. A monster storm appeared on the ultramarine azure of contentment. It was no larger than a man's hand at first sight, and before the trusty mariners had ported their helm the infuriated hydra-headed dragon of discontent had entered the sacred portals of peace and large fragments of shattered happiness strewed the pathways and byways which bind together the fair city of San Antone to the surburban elysium of the gun club.

It occurred thus. As soon as the discovery was made that the lake contained an abundance of fish a coterie of about twenty members of the club "chipped in" and hired a double row of shining buttons with policeman attachment to make regular patrols along the verdure clad borders of the lake. He was also to make it very hot for trespassers. The select few pay $1 per capita for the luxury. As there are one hundred full-feathered members in the club there are eighty who do not come within the charmed circles of the "police commissioners."

Some of the "eighty" don't shoot. But they would like to fish. But the select twenty say that no one can fish who has not been besmeared with the sacred ointment of initiation within the sacred and mysterious twenty, and they swear by the beard of Moses that they shall not cast a line in the lake, nor darken the portals of the sacred precincts of Lake Elmendorf unless they put up in legal tender of the realm that necessary *quid pro quo*.

The "eighty" say they have been paying dues for long years and that any benefit accruing indirectly to the club should be equitably smeared on rich and poor alike.

At last accounts the turmoil and showers of expletives had so troubled the placid waters of the lake that an old spoonbill with his mouth full of seaweed was heard to mutter to an aged bass, "What fools these mortals be."

### Deer Hunters.

Capt. E. A. Dosch, the septuagenarian nimrod, accompanied by Charles Hummell, have returned from a successful deer hunt from Oppenheimer's Pasture, seventy miles west of San Antonio. They brought a handsome five-point buck and two does, besides a half dozen nice turkeys.

Messrs. Ed. Dreiss and Hans Degener, two old-time deer hunters, have had their winter's outing. Each killed two deer. O. C. G.

### Big-Guns at Havre de Grace.

Philadelphia, Pa., Dec. 20.—*Editor Forest and Stream:* I take this liberty of writing to you about certain facts that are going on now nightly at Havre de Grace. My brother and I are part owners of a shooting craft for which we pay the usual licenses, and as you well understand there are considerable other expenses attached to it. We are old gunners and have been going to Havre de Grace for years. We believe there is a law prohibiting big-gun shooting at night, in fact there were at one time a lot of detectives appointed by the different counties to break up this big-gun shooting. We have heard no less than three to five big-guns in the different nights we have been down lately; consequently the ducks are so wild they will not decoy, and even the black-heads are going away, as we find they are bringing fair prices in the market and the big-gun shooters are after them. The money arising from the payment of licenses, according to our understanding, goes to the support of certain police to enforce the laws of the State, which read that no guns are to be fired after sunset, and no gun used that cannot be shot from the shoulder and that weighs over 15lbs.

We really think that this matter should be looked into. It is the only sport we can get at now near our city, and we are under expense of several hundred dollars a year, not only paying licenses, but payment of the crew and keeping up the rig. The night before the last shooting day, Wednesday, my brother, who was the only one down, distinctly heard, between 12 and 2 o'clock, three big-guns to the southward of him. It is not only the ducks they kill and gather, it is the hundreds of wounded ones that escape from a discharge of 3lbs. of shot, and the terrible fright they experience being paddled up to and fired into while feeding. My brother lay in the box—a single box, too—all of Wednesday, the 19th, and noticed bunch after bunch of ducks flying, probably 300 to 400ft. in the air; none of them would dart, all going to the southward. This of course, you understand, is caused by the fright the ducks have had being big-gunned at night. He killed six ducks, and these were killed in hard shots flying over the box, as he had no darts. It seems to us there should be some way of stopping this unlawful big-gun shooting.

J. B. M. Harris.

### Cobbs Island Shooting.

Cherriton, Cobbs Island, Va., Dec. 20.—Owing to the very moderate weather last week, gunning was not so good as it was the week before. Captains E. B. Cobb and George Isdell gunned three days and bagged 71 black ducks (or black mallard). William Knapp, B. S. Payne and F. S. Payne gunned four days and brought in 68 black ducks, 54 black brant, 4 geese and 25 small duck of different kinds. The latter three gentlemen were from New Jersey. Thomas B. Smith.

### A Pennsylvania Party's Luck.

Allegheny City, Pa., Dec. 18.—Alex. King, Thomas Smith and Joseph P. Reed returned yesterday morning, Dec. 15, from a three days' hunt in Indiana county, with 39 pheasants, 27 rabbits, one red fox, one raccoon and an owl that measured 4ft. from tip of one wing to the tip of the other. P. F. S.

### About Prairie Chicken Trapping.

Sioux City, Dec. 14.—*Editor Forest and Stream:* The season of the year in which the trapper of prairie chickens gets in his deadly work is fast approaching and I think that a little jogging of the memory on the subject will not be amiss on the part of the various State game protective associations, game wardens and all who are interested in the preservation of this fast disappearing bird. State Legislatures as a rule will soon be in session and now is the time for us to get more stringent laws on the subject passed. I think that while the general game laws may be amended to advantage, we can do more real good if they are let alone as they now stand and our attention is directed toward the enactment of such new laws that the trapper will find it unprofitable to break. Trapping is done almost entirely by farmers and destroys more game than all the market-hunters, game-hogs and others combined.

Now that the cold weather is setting in, the chickens are moving south; and sections that since early in the spring have been deserted are now full of birds coming from Minnesota and Dakota. All through Central Nebraska and along the Missouri River in South Dakota, Nebraska and Iowa the cornfields are full of them, where a short time ago one might hunt for a week without finding one. These birds are so wild that there is little danger of many being killed in a legitimate way, but as the ground is covered with snow and their food is out of reach they will become victims of the deadly traps by the thousand, to say nothing of the hundreds that will be potted as they huddle under some haystack or other cover for protection against the snow and cold.

I don't know whether Iowa has a game warden or not, but if there is such an official or any organization for game protection they can find plenty of work this comin gwinter if they want it right in the Missouri River bottoms. As a starter they could not do better than visit and investigate thoroughly Monona county; in the vicinity of Ouawa in that counry trapping has always been practiced to a large extent. In my own trips in the latter part of the season I have never failed to see dozens of traps in plain sight from the wagon-roads. I have a number of friends in Ouawa who are sportsmen in every sense, and who deeply deplore this state of things but say that the men who violatethe laws are customers of theirs, and it would mean ruin to their business if they should prosecute the offenders. Now right there is a fine field for a game warden to commence operations, and I could and will name dozens of other localities if that is not enough to warrant the proper officials beginning their work.

I understand that the South Dakota sportsmen intend to do something besides talk toward putting a stop to trapping in the southern counties along the Missouri River and I sincerely hope it is true. A few more years such as last season and the chickens will be as extinct in South Dakota as the buffalo. W. R. H.

### Killed the Bear with an Axe.

Bethel, Me., Dec. 15.—Mr. Oliver Lee, of Topsfield, ran short of kindling wood last week and shouldered his axe and started for the woods in search of a dead tree. After traveling a long way he came to a splendid old dry pine partly turned up by the roots, at which he went, cutting a large notch, and soon discovered a bear had previous exemption rights and was preparing to defend them. At a large hole in the hollow tree a short distance from where he was chopping a big bear stuck her head out with a hoarse growl and champing of teeth, occupying the immediate and earnest attention of Mr. Lee, who at once forgot his kindling wood notions and started for the black and fast appearing body of the big bear. Lee struck the bear a heavy blow with his axe, which only seemed to enrage the beast, and before he could strike again the bear was fairly out of the den and ready for a lively scrimmage, and it was only after several strokes that the axe had penetrated her brain and she succumbed to the inevitable. Lee then heard a whining noise in the tree and on examination found two recently-born cubs, which he dispatched. A historical fact is that no female bear can be taken from her den, dead or alive, without first dropping her cubs. The cash proceeds of the affair, besides the winter stock of bear meat, was $15 bounty and $20 for the old bear's hide. J. G. Rich.

### North Carolina Game Resorts.

Newbern, Dec. 14.—There are more bears in these parts than there are hunters. South of here they are very numerous and many have been killed of late. Local papers mention them frequently. Farmers complain of their depredations. A day or two ago a wild hog weighing 600lbs. was killed within six miles of Newbern, and its meat was sold in the city market at four cents per pound. The animal was shot with buckshot. Six charges were fired into him. Quite a few sportsmen are at Hotel Chattawka. Sheppard Knapp, Jr., and W. H. Blanchard, of New York, are in camp near here. Partridges are numerous. Venison and quail on toast are a frequent bill of fare. Snipe on the marshes near town and ducks in Bryce's Creek, up the Trent River, within a two-mile pull by boat. Paddies, mallards, widgeons, buffleheads and teal. Snipe are always abundant and but little shot at. There are three parties professional here who take sportsmen out at $3 per day, over good dogs, and several gentlemen amateurs have good outfits and will be glad to make up parties to go out. Temperature so far 60° to 75°, excepting the late cold snap. C. H.

### On Broadwater Bay.

Philadelphia, Dec. 17.—A party of five consisting of the Moore brothers, S. Penrose, Henry Fisher and the writer, spent three days last week on Broadwater Bay, Va., duck shooting. We "struck it" just right, wind and tide in our favor, Birds plentiful and inclined to decoy. Black ducks and broadbills were the principal birds shot. Whole number shot 186. Captain A. F. Taylor, our host, did his best to make our trip an enjoyable one and was highly successful. This was our third trip there and each has been better than the one previous in point of ducks shot. But one brant was captured and if any one is interested to know who shot him refer him to Mr. Fisher. Dr. Marston.

### The Question They Ask in Kentucky.

Cincinnati, O.—*Editor Forest and Stream:* I have been a consistent reader of the Forest and Stream and the articles published on "pot-hunting" and "Stop the Sale of Game" have been carefully read, and any laws which will stop both will meet with my hearty approval although I have but little time for field pleasures. One week last November Judge Williams and I took a trip to the residence of Mr. Wm. Cloud, in Boone county, Ky., and we found that pot-hunters had almost cleaned this pretty piece of country of game. The weather was very bad, with driving rains, snow and and a little sunshine mixed in onco in a while. We succeeded in getting a few rabbits, the only game we saw. We had very little trouble in getting permission to hunt on adjoining farms although the question "Are you shooting game to sell?" was answered with a prompt "No, sir." The kind hospitality of Mr. Cloud will never be forgotten, and his amiable wife saw that we had all the comforts of our homes. Doc N.

### Chuckor Partridges in America.

Macomb, Ill., Dec. 18.—*Editor Forest and Stream:* We have six chuckor partridges raised loose by a bantam doing nicely. They are quite tame and stay in the yard with the common hens, and roost in the barn on the hay. These birds have never been confined, but run loose all over the farm. They will go into the woods and be gone half a day at a time, but are always at home at night and morning. I believe we shall be successful in introducing this beautiful game bird. Col. J. Penters, of the English Army, at Victoria, B. C., has sent to India for some, and looks for them to arrive in New York in April.

W. O. Blaisdell.

### A Singular Accident.

Patterson, Pa.—Last week a singular accident befel a young man named Wagner, while hunting up in Licking Creek. A large hawk came flying overhead. Wagner shot at it. The double-barreled shotgun jumped out of his hands, and striking on the rocks, the second barrel heavily loaded with buckshot, was discharged, the whole load passing through his leg. About two weeks ago near the same place a man named Harshberger attempted to pull his rifle out of the bunk muzzle foremost, when it was discharged, the ball passing through him. He was still alive when last heard from. Quite a number of bear have been trapped and shot within a radius of twenty miles of this place; three were killed in one week. Deer are very scarce in this section. Sancho Panza.

### Chicago and the West.

Chicago, Dec. 22.—The second annual meeting of the National Game, Bird and Fish Protective Association will be held Wednesday evening, Jan. 9, and Thursday, Jan. 10, 1895, in the Sherman House club rooms, Chicago. An urgent invitation is made by the secretary for the attendance of delegates and members, and a cordial request for the game and fish wardens to attend also. The rush of the holidays will then be over and business men will have more leisure, so that excuses for non-attendance will not be valid. Let every one be there.

E. Hough.

### Louisiana Game Resorts.

New Orleans, La.—*Editor Forest and Stream:* North and northwest of Shreveport, La., are a number of lakes, where wild duck and geese are plentiful in winter; and Lake Bistineau, southwest of Shreveport, has almost a national reputation in this regard. For wild turkey and deer, you may safely trust to finding them almost anywhere in northwest Louisiana.

If one wants to find bear, he can easily do so along the Sabine River.

### The Megantic Dinner.

Boston, Dec. 20.—*Editor Forest and Stream:* The annual dinner of the Megantic Fish and Game Club will take place at the Hotel Vendome, Commonwealth avenue, Boston, Thursday evening Jan. 10.

W. C. Prescott.

### Enforcing the Michigan Venison Law.

Lansing, Dec. 13.—*Editor Forest and Stream:* Last week the State game warden visited our city and arrested six of our butchers, charged with having venison in their possession, and offering it for sale after the law allowing them to kill venison had expired. Two pleaded guilty and paid their fines, and four are to stand trial.

Heretofore the law has been a dead letter at Lansing, and these butchers who had venison on hand when the law allowing them to sell it had expired, kept right on selling till the stock gave out. But things have changed, and for the better. Deputy Warden J. E. Nichols, of Lansing, is a great sportsman, and an up-to-date legal man in every sense of the word. In a little chat a few days ago, he remarked that the State Game Association were to have a meeting at Lansing soon, presumably soon after the Legislature meets in January next, and that it was in the air, that our game laws would be looked after sharply. A tax on non-residents; prohibiting the killing of does and fawns; making the open season alike and at the same time in upper and lower Michigan and Wisconsin; prohibiting the sale of game, and making a close season on quail, are some of the points.

Very few quail can be found in Michigan to-day. Four years ago when the close season expired, or was taken off, the birds could be found almost everywhere, but the slaughter was too great for them to stand, and to-day our best shots get but three or four in a long all day tramp. Our dealer in sporting goods has had a card in his window most of the season indicating that he wanted to buy quail, by the hundred—even the festive little rabbit begins to feel the effect of an all the year open season, and the ferret and dog, and small boy, have nearly exterminated them. Grouse a few years ago abounded all over the State, till to-day it takes a good shot to get one, and there is not one grouse in the woods to-day where ten years ago there were hundreds. Most of the deer killed this year were does and fawns; very few bucks were killed. Julian.

### Prairie Chickens.

Recent reports received by the Chicago, Milwaukee & St. Paul Railway from stations in the prairie chicken country of Minnesota and South Dakota all indicate a prospect of the best hunting for years. Chickens are very plentiful and in fine condition. Duck shooting prospects are also good. Full information can be had by addressing Ticket Agent, Chicago, Milwaukee & St. Paul Railway, 207 Clark street, Chicago.—*Adv.*

# Sea and River Fishing.

## ANGLING NOTES.

### Fario versus Fontinalis.

ALMOST since the common brook trout of Europe, *Salmo fario*, was introduced into the waters of this country, fears have been expressed that because of its more rapid and greater growth the fish would destroy our native brook trout, *Salvelinus fontinalis*, when put into waters with it. These fears were perhaps natural concerning a new fish about which we were not fully informed, in a country where indiscriminate stocking is practiced as it is here.

However, those best fitted to judge of what the result would be, seem to have taken a conservative view of the supposed effect of turning the two species of trout, or charr and trout, loose in the same water and declared that if ordinary judgment was exercised in selecting the waters in which to plant the brown trout (*fario*), they were no more to be dreaded than our own brook trout, so far as their predatory and cannibalistic habits may be concerned.

Besides preying upon our native trout the brown trout is charged with not rising to the artificial fly when it is artistically presented for his acceptance on the surface of waters where the fish has been planted.

It is one thing to make charges against a fish and it is sometimes quite another thing to prove the charges to be true. It is more than likely that in time, in spite of the bad name some people have given the brown trout, we would have become better acquainted with the fish in its new home and have realized that it was not so black as it has been painted, and that after all it was not so very unlike other species of the salmon family.

But an Englishman in this country puts the beloved trout of Great Britain in a hole, so to speak, when he says of it that it is an enemy of our native trout; that it was an error to introduce it where the *fontinalis* already existed; that it will prove as bad an introduction as the sparrow, and that when it grows large it feeds wholly on fish by preference—and of course it is a cannibal. There is an indictment for you! One might think that our own native trout when grown large did not feed wholly on fish by preference, and that it was not a cannibal; but it does, and it is, just the same.

We are fairly well acquainted with our native trout and know something of its habits and characteristics; and as it has made the journey across the Atlantic in an opposite direction from that made by the brown trout, let us see how our beautiful fish has been received in England and what they think of it, and what sort of a name they give it over there.

Mr. Richard Edon says in *Land and Water:* "I strongly advise the restocking of our lakes and rivers with native fish only, and not foreigners, more especially American *Salmo fontinalis*, which is both pugnacious and voracious, and also a great wanderer. They are most difficult to keep at home should there be a loophole where they can get through." When this appeared a well-known English angling writer, "Silver Grey," asked Mr. Edon "on what grounds does he condemn the free-rising and plucky *fontinalis* as being pugnacious and voracious, and too great a wanderer." Mr. Edon replied that after a practical experience of twenty-three years with the fish, he had not heard any one who gave our brook trout a good name. It was called the "wanderer" because it disappeared from the waters in which it was planted. As to its pugnacious propensities:

"If you put *fontinalis* into a tank with other species of the *Salmonidæ*, in forty-eight hours there would scarcely be a fin of the opposite species but had been visited by *fontinalis*." He further cites a visit to a hatchery where there were a lot of yearlings of our trout ready to be sent to an exhibition and when he "looked into the tank he beheld numbers of fish with a tail at each end of them."

How could anything be more dreadful of any fish? Would the brown trout, or could they, be worse than those horrid *fontinalis* which probably swallowed one another until only one was left, when he swallowed himself.

Really a fish has to go away from home for people, some people, to find out just the kind of a freebooting pirate he is.

I believe as a rule we think fairly well of our red-spotted trout, and many an American angler will be pained to learn what a holy terror he becomes when he gets beyond home influences and associations.

"Silver Grey" does put in a good word for the *fontinalis* in reply to Mr. Edon and others when he says that he has caught the Loch Leven trout and the *fontinalis*, catching one with one cast and the other with the next cast. "I am bound to say that, although perhaps a thought slower on the rise, the *fontinalis* takes as freely as the Leven, shows as much fight, and while being more beautiful than the Leven, is its equal, if not its superior, in quality."

By common consent the English critics of our *fontinalis* refer the whole matter to Mr. J. J. Armistead, the well known fishculturist of the Solway Fishery, to decide whether our brook trout should be fostered in or banished from English waters. Mr. Armistead put on the judicial ermine and speaks from the bench as follows: "We always find plenty of people to 'run down' anything or anybody. It always has and probably always will be so. But is it fair to run down a fish before giving it a fair trial. There are many pros and cons connected with the *fontinalis*, and a book might be written on him. In certain waters he does very well indeed, and is a game fish, rising well to the fly and giving excellent sport, of which I have ample proof. In other waters, however, he has not done well at all, though the same may be said of *S. levenensis*, which is a very excellent fish.

In some cases *fontinalis* has vanished, owing to his migratory propensities, which are unusually strong. On this account he has been unjustly condemned. It is said of him that in some waters he will not rise to fly. Personally I have not met with such a locality, though I have seen several of the other kind, and I very much query if many such places exist. * * * I have heard of where *fontinalis* were accused of not rising to the fly and believe it was because they had not the chance. Personally, I have found them very free risers, and so have many others who have fished for them.

"As to being 'cannibalistic.' All trout are cannibals. Though *fontinalis* is really a charr, yet he is called in America the 'brook trout,' and so we give him the same name over here. I have seen a similar occurrence to that related by Mr. Edon take place among a lot of *Salmo fario;* indeed, when these fish do begin to eat their fellows, their rapacity knows no bounds."

In other words, *fario* and *fontinalis* average pretty much alike as to their habits, and when either one of them is out for an airing, all sorts of kindergarten fish, if they consult their own safety, will do well to take to the woods.

### From the Land of the Beaver.

My old friend, Mr. John Mowat, is nothing if he is not a confirmed salmon fisherman, as perhaps I have had occasion to remark in this column before, but in a recent gossipy letter written from his home in Campbellton, New Brunswick, he says some things that will make trout fishermen roll their eyes skyward:

"I helped some at our hatchery this fall and laid down two and one-half millions salmon eggs, my son Alexander getting as many more at the St. John River hatchery. Remember, we don't do anything here in the trout line, and don't want them. They are much scarcer here now than they were twenty years ago, but the salmon are more plenteous. Trout, such as those 5 and 9-pounders caught in the Rangeley Lakes, and the hard fights so often graphically depicted in FOREST AND STREAM never even make my mouth water. So, true it is, that a good trout fisherman should never touch salmon.

"I see that some FOREST AND STREAM correspondents go in for what may be called slaughtering in order to make a score. It might be well to have an act framed to limit the catch of fish. Some of our Restigouche anglers have gone in for needless slaughter for the sake of a score. 'Who will be high line? Who is going to have the biggest bag?' are not good mottoes. So far as I know salmon are not allowed to go to waste. Anglers who are high up, say fifty or sixty miles above a station, commonly salt the surplus fish and give them to their guides. This has a tendency to incite the men to put forth all their energies and to put the angler in the most favorable positions possible to both hook and save the fish, as very much depends on your guide's cleverness and ability in handling the canoe and gaffing the fish. Just to show one score where I believe two rods were fishing a month. The guide, Peter Gray, an Indian half-breed, sold in this town ten barrels of salted salmon. This shows that the fish were not destroyed, as they were in fine condition. It shows also that 150 salmon, averaging 20lbs. in weight, went into those barrels to fill them, as in salting fish one-third is allowed for salt shrinkage and offal. No doubt salmon was the standing dish for the canoemen during the time, and so a good many more must have been killed. It looks somewhat like slaughter, and, I should say, hard work. I should think a limit of thirty, well forty if you will, of those large fish is or should be satisfactory to a rod.

"My two sons Alexander and J. P. Mowat have obtained some good fishing water from four to ten miles above Intercolonial Railway station, at Metapedia; two of them within a mile of another station, also one seventy miles above tide water, on which in three days last June 24 salmon were taken.

I hear that the Sweeny and Alfred property, seven miles from the station, has been bonded by a Georgia party for $70,000; this includes all land and fixtures. I also hear that the Restigouche Salmon Club is about purchasing the Breese property, for which, two years ago, he paid $36,000 and on which he has expended $3,000 for a house."

The Sweeny property which Mr. Mowat refers to is one of the best private fishings on the Restigouche. Last summer I met a gentleman on the cars between Quebec and Montreal who told me that some New England men were negotiating for this fishing either to lease or buy it, and the terms mentioned were so low that afterward when I met Mr. Harry Sweeny and talked with him about the property I had not the assurance to ask if the terms were as I had heard them. The figures Mr. Mowat gives is very like what the property has been considered worth.

### An Invitation.

A friend who invites me to go a-fishing for landlocked salmon next June concludes the invitation thus:

"Come float with me and be my love,
And we will all the pleasure prove
Of dreamy hours and outdoor lunch,
With dulcet cups of ruby punch;
Of lissome trout the draughts between,
And dancing Salmo's silver sheen,
With nibbling smelts to while away
The intervals of salmon play."

He says in conclusion "Can you stand it?" I do not know whether the query refers to the fishing or the poetry, but I can stand both. The fact is, I think this is an improvement upon Walton's "Milk Maid's Song." It may be quite ecstatic to "sit upon the rocks," and also to "see the shepherds feed our flocks" as Walton has it, but at the risk of being considered more material than etherial, I must confess that outdoor lunch and ruby punch are more satisfying. In these modern days, with crusaders around, one might get "run in" with only "a belt of straw and ivie buds," but surely there can be no moral objections to fishing for salmon with smelt bait, and I shall accept the invitation with many thanks.

### "Lyra Piscatoria."

Many anglers on this side of the ocean know of "Cotswold Isys, M.A.," as an author and as the honorary poet of the Fly-Fishers' Club in London; and when, some months ago, I mentioned that he had written a little volume of poems on the "Nature, Habits, Mode of Capture of Fresh-Water Fishes, on Flies, Fishing and Fishermen," and would publish it if sufficient subscribers were obtained. I received the names of a number of subscribers to be forwarded to the author. "Cotswold Isys" is a London clergyman, and the book was written purely from a love of the subjects about which he sings and with no hope of pecuniary reward, and, therefore, he did not wish to put the MSS. in the printer's hand until the greater part of the cost of publication was assured. Friends who have sent in their names through me have asked when "Lyra Piscatoria" might be expected from the press, but I could not answer the question until now. The last mail steamer brought me a letter from the author, in which he says:

"I am sure you will be glad to hear that "Lyra Piscatoria" is to be published at last. It is now being printed by Horace Cox, the publisher of the *Field*. I hope it will be ready to send out in January. The price will be 3s. 6d., and I expect it will prove a loss to me. The edition will be one of 500 copies." Every one of the forty, about, anglers who gave their names to me as a subscriber is a reader of FOREST AND STREAM, and this note will inform them when the volume may be expected. Should others desire to obtain copies of the book, they may be procured by writing to "Cotswold Isys," Fly-Fishers' Club, Arundel Hotel, Thames Embankment, London.

### Slack or Taut Line.

A correspondent sends to FOREST AND STREAM the following query: "Will you kindly inform me in your next impression how to play a fresh water bass when he breaks from the water. What I mean is, whether he should have the butt or should he have slack line?"

First, I think it my duty to tell this correspondent that if he will consult all the angling books, so far as I can at this moment recall them, he will find that when advice is given on this point it is that the tip of the rod must be lowered when the fish jumps from the water to give slack line so that the fish may not fall back on the taut line and leader and break the latter. This advice is so antiquated that it is moth-eaten, and has been handed down as a precious possession through generations of fishermen.

Now, if the correspondent has the courage to follow the advice he seeks he will do nothing of the sort, but keep his rod well up and the line taut from strike to landing net. To "give the butt" is chiefly poetical license. Once in a while, and the occasions are rare, as I believe, the top of the rod may be inclined backward as the butt is put forward (for this is "giving the butt") to bring the greatest power of the spring of the rod to bear on a fighting fish, but one will not do this much oftener than he has the measles. A rod held well up where it exerts its steel-like spring is all the "butt" a fish gets as a rule, for that is all the angler can give it.

As to a fish falling back on a taut leader and breaking it if the tip of the rod is not lowered to meet the jump, I consider it one of the choicest bits of rot in angling literature. If the rod is of any account, and of course I assume that an angler will fish with a rod and not with a bean pole, the fish cannot do what it is presumed he may do. On a previous occasion when I said this at greater length, and gave reasons for thinking as I expressed myself, I expected to be jumped upon from all directions, but no one jumped. Once when fishing for black bass in Canada I was catching more fish than my conscience would permit me to kill, and day after day I gave the fish every possible opportunity to break the leader by falling back upon it, when the line was as taut as it can be when using a pliant rod, and there was not a break because of it, although there were breaks from other causes than falling back on the leader. A. N. CHENEY.

## THE BLACK SEA BASS.

I SHALL never forget the sight of my first tarpon, as it was in a country where they were rare. I was fishing for gray snapper, one of the gamiest fishes that swims—and little known, owing to their timidity, by sportsmen—when, crawling under a wharf to catch some live bait from a school of sardines, I saw a fish, blue-backed and silver-sided, certainly 6ft. long, lying in shallow water not 10ft. from the shore. Whether the feeling that took possession of me was buck fever I know not, but the tarpon escaped.

An almost identical sensation was experienced when I saw my first black sea bass—a fish that is found at its best about Santa Catalina and San Clemente islands off Los Angeles county, California. I have always been an admirer of big sea fish, and in the East had tried for various reasons to take a horse mackerel on a line, and made some interesting experiments with sharks, many of these latter coming to my bag in Southern waters, so I could claim fairly and without egotism to know something about the pulling and game qualities of big fish, having taken every large fish of consequence from Maine to Florida. But this black sea bass of Santa Catalina capped the climax.

I am not going to tell of my own victories and defeats with the hand-line, of the 347-pounder I took or the 280-pounder that took me, or the various other adventures I have been fortunate in experiencing during the last five years in Santa Catalina waters, but to give my observations of the capture of the bulkiest fish I think that ever fell before a light rod reel.

To those who have never seen the black sea bass in its prime, I would suggest as a companion a small-mouth black bass. Imagine such an one of 6lbs. suddenly enlarged to a length of 6ft. and a weight of anywhere from 200 to 500lbs. Give it a fine blue eye, a rich chestnut color, a powerful, dogged, determined appearance and you have the black sea bass or *Stereolepis gigas* of Santa Catalina waters. Endow this creature with the strength of a colt, a remarkable agility and you have the game.

In the summer of 1894, I spent the season at Avalon, the headquarters of the island which has grown to be the fashionable resort of Southern California—a delightful spot in summer and more so in winter—and which is connected to the mainland by good steamers, the trip across occupying about two hours and a half. Early in the season Major Charles Vielé of the Fifth Cavalry, one of the most skillful fishermen in the West, came for the summer fishing and made a fine record with yellow-tail, doing nothing but rod and reel fishing. At the start the Major, after hearing some of my black sea bass stories, said it was fine sport but was degraded by the hand line, and then and there announced that he would take a bass on a light rod if it took all summer.

The feat was considered so impossible that the Major's friends took it up as a stock joke, and for two months he bore it good-humoredly, during which time he made repeated attempts, but all to no purpose—an aggravating thing, as every few days gigantic bass were brought in and suspended in front of the hotel, when the Major's friends would pleasantly call his attention to them and smile. One wag said that he had ordered a Norway pine for a rod and a donkey engine attachment reel for the Major, and there were endless suggestions as to how the thing was to be done. I am glad to say that I always thought he could accomplish the feat.

Days and weeks slipped away until the day for his departure to join his regiment arrived. He had invited me to join him in his last attempt to capture a black sea bass, and by 7 o'clock we were rounding the end of the island in a small naphtha launch, headed for the fishing banks near Silver Cañon. The Major's outfit was a 14oz. lancewood rod, called by the Tuft-Lyons Co., of Los Angeles, a yellowtail rod. His line was a 21-strand Cuttyhunk, with a cod-line leader a foot long. The reel was a silver one, that I believe came from Abbey & Imbrie's years ago, and held 500ft. of the small, light line, which presented a marked contrast to the halibut line usually employed. The hook was a large-sized cod hook, and baited with half a barracuda.

We came to anchor on the edge of the kelp, a good place for fish, but a bad one for fishing, and threw over three lines, one a hand line, the Major his rod line and I a similar outfit though a lighter striped-bass rod, 18 Cuttyhunk and No. 2 expert reel, used here for yellow-tail from 15 to 40lbs. We had evidently struck a school, for the excitement soon began. The Major took his place in a small boat from which he did his fishing, so that the moment he hooked his fish the skipper could cast off and take the oars and aid in the catch. In less than ten minutes he had a strike, then another, but missed. Then a bass took the hand line which I had, and for ten minutes amused itself with me. I brought it within 30ft. of the launch and then gave up, not being in good trim professionally, and passed the line to the Major, who had never taken one of these fish, who landed him after a good fight. I say landed; he brought him to the surface, and when he was killed and lashed to the launch after giving us all a shower-bath with his powerful tail, this fish weighed 280lbs.

In a few minutes later the Major had another strike on his rod-line and hooked the fish. It has been my good fortune to listen to the voice of many reels, but I never heard one ring in quite so high a key as this. It was a hiss from a silver throat, and the force of the run fairly doubled the rod up. How so light a line could stand the mere rapidity of such a rush was astonishing. It was difficult to tell how much line the fish took, but by skillful manipulation, the Major succeeded in stopping it by using a patent home-made break of leather of his own inventing which he used with a thick glove, and this was an important factor in the struggle. The Major would gain a few feet, then would come the high staccato of the reel, and gradually the big fish took the fisherman off shore. When it was not rushing and pounding on the line it was sulking; then it would come in with a rush, only to turn and start to the bottom like a whale sounding. The reader to appreciate this must remember that it was all on a 21-strand line, which well illustrates the skill with which the game was handled. Four or five times the fish in one of its terrible rushes passed around the kelp, and finally the Major called to me that they would have to come aboard for a boat-hook. The oarsman had an oil can as a buoy in the boat, and to this the rod was fastened and left while they came aboard the launch, where the boatman rigged a pair of hooks, back to back, to fish up the kelp, after which they returned to the anchored fish. A shout and the screaming of the reel told me that they were again successful.

For two hours and a half the fight was kept up, during which the excitement was at fever heat, despair and victory alternating. Finally I heard a shout, the Major waved his hat, and I saw the boatman rowing, while the black sea bass was towing behind with a rope through its gills and the little hook and line still fast in its bony jaw. During the two hours and a half fight I had landed a 100lbs. black sea bass on the hand line and lost every hook on the launch from my rod, and demonstrated that from an unanchored boat the catch was impossible, so we steamed into port with three bass, which when hung up to be photographed weighed respectively 227, 100 and 158lbs., the latter taken by the Major on his rod, the heaviest fish, if I am not mistaken, ever taken on a rod in these waters.

These fish spawn in September and bite well. In November and later they school and when struck are found ravenous, often ruining the other fishing. For any one who desires hard work that requires skill this sport can be commended. Santa Catalina Island is a new fishing ground, but is yearly attracting more sportsmen, and combines the possibilities of taking many game fish with a rod and reel with good quail and wild goat shooting.

PISCATOR.

CALIFORNIA.

### Michigan Trout.

MANISTEE, Mich.—The trout fishing is improving rapidly. The trout are mostly planted in the smaller streams which, as a rule, run through cedar swamps and are fishable only by the most patient—not to say "toughest skinned," for the mosquitoes are terrible in their day—fishermen. They increase very fast and grow to a large size. Remembering the trout which I used to catch in New York and in the New England States, it seems to me that the fish here are much heavier for their inches, being more "chunky." I saw one weighed two years ago which after being out of the water all day tipped the scales at 5lbs. He was 21½in. long. I caught one this last season which was 17½in. long and weighed 2½lbs. after I got him home. Both of these trout were not symmetrical, having a decidedly aldermanic pursiness of the bread basket—or should I say, "worm basket." Both were very dull in coloring and both were taken from streams running into Lake Michigan, near their debouching points. Possibly this last fact may have had something to do with their color and developement.

Trout grow fast in this section, but I was not prepared to believe that a fry would attain to a pound weight in the fourth year after it was planted. In the month of March, 1891, I stocked a stream with fry, which so far as anybody knew had never contained any trout. In August of this year (1894) I saw one taken from it which weighed a plump pound and several others nearly as large.

Several creeks—all small streams are criks in Michigan and one soon falls into the vernacular—have been stocked with rainbow and German trout, which are doing well and bid fair to outstrip the—I had almost said native trout, but we have no native fish, all having been planted—*S. fontinalis* in weight and speed in taking on weight.

The grayling is not nearly as heavy a fish as the trout, for his length, as his form is more trim, tapering from just before the dorsal fin to the caudal. There is also less weight in his head than in a trout's. F. A. M.

## TEXAS FISH, FLESH AND FOWL.

VELASCO, Tex., Dec. 15.—If you will take a redfish or trout weighing about 3lbs., clean carefully and cut in pieces the size of your hand, season and roll in Indian meal, and then fry over a hot camp-fire until brown, you will have a feast fit for a king; it will beat tenderloin trout out of sight, and if you pile the flaky morsels on the bleached side of an old piece of drift timber you will have a service full as tempting as the choicest Sèvres.

The Velasco Rod and Gun Club has been indulging in such primitive cookery for the past ten days or two weeks.

The camp was pitched on the banks of the San Bernard River, a beautiful stream flowing into the Gulf about ten miles south of Velasco.

The San Bernard is locally famous as a fishing place and the neighboring woods abound in game of various kind. Squirrels are plentiful, and if I attempted to tell you some of the lucky bags of partridge brought in by banker J. M. Moore, our champion wingshot, you would think my story exaggerated.

And the bill of fare is not limited to fish and game. The Cridar Lake oysters are equal in size and flavor to the finest in the world, and being a native of the shores of Chesapeake Bay I may profess to be a judge of oysters. It is no trouble to obtain any quantity and Dr. Boyd, who sports the longest legs in east Texas, easily supplied the camp by wading out in rubber boots and grappling with a tongs. If you have ever eaten roast oysters, seasoned with a round of good stories, and by a bright camp-fire, I think you will agree with me in saying steamed oysters are "not in it to any great extent."

Some of the club members who are artists with the fly-rod, wanted to go about eight miles further to the large lake on Governor Wells Thompson's plantation, but the weather turning bad the trip was abandoned. The Governor told the boys a tale of his negroes catching an 8lb. black bass by lowering a cotton basket in the lake and then dragging it up quickly; and Messrs. Lee, Boyd and Morrissy have been uneasy ever since.

The weather has not been cold enough to bring in the ducks and geese in their usual numbers, although a party of Pacific Express employees headed by Route Agent J. A. Russ, of Palestine, Texas, who camped upon Cridar Lake a couple of days, dead-headed a barrel of ducks, two barrels of fish and a half carload of oysters to their friends, as the result of their outing.

Mr. W. H. Holman, of Argonia, Kansas, had an adventure with a large sawfish a few days ago. Mr. Holman was on the coast for the first time in his life. He had a shotgun. He saw the fish in shoal water close to shore, and concluded to head it off after the Kansas style of hunting jack rabbits. He waded beyond and around the fish, getting it between him and the shore, shooting it with both barrels, whereupon the monster proceeded to saw Mr. Holman's leg in the most workmanlike manner. Fortunately a friend went to his rescue and hauled him out of the water, where he was almost helpless from the pain of his wound. Dr. Foster dressed his leg and he is doing well. He lost his gun and thinks he does not need it to hunt sawfish with anyway.

Certain parties living north of town have been killing deer and selling them to the butchers in town. The members of the club have them spotted and have registered a solemn vow to get even with them on every occasion they may have the chance in business transactions and otherwise. The game butcher is an Ishmaelite to all true sportsmen.

Mr. Walter Farwell, a son of ex-Senator Farwell, has been here in company with Mr. G. R. Scott, of Chicago. Mr. Farwell had quite an exciting adventure with a large wildcat while hunting in the Brazos bottom. Fortunately Mr. Farwell's dogs distracted the brute's attention for a few moments, and Mr. Farwell, being a pretty fair sprinter, managed to get over into the neighboring county before the cat got its business end ready.

Mr. Scott caught the biggest tarpon on record so far. It weighed a little over 207lbs., while the one that jumped on the deck of the steamer Mollie Mohr last season and was dispatched by the crew, weighed but 187.

DAVID LLEWELLYN.

### Texas Tarpon and Florida Tarpon.

SAN ANTONIO, Tex., Dec. 9.—*Editor Forest and Stream:* Mr. A. N. Cheney in your issue of Dec. 8 discredits the Texas tarpon fishing record to show that "L. F. M." was mistaken in his claim. But Mr. Cheney did not state how many people were to be credited with the Florida fish while the Texas record was as follows, which I obtained from one of the party: H. M. Wallis, 44 strikes, 5 tarpon landed. W. M. Louis, 30 strikes, 4 tarpon landed. F. K. Bull, 25 strikes, 3 tarpon landed. This is a record of 99 strikes and 12 fish brought to the boat by three men. But Florida fishermen must not think that this is owing to any lack of skill on the part of the fishermen. When it comes to trolling for tarpon as compared to still-fishing as practiced in Florida there is as much difference as there is between bait-fishing and casting the fly. In the Texas fishing the tarpon is given no chance to gorge the bait, but must be fairly hooked in some part of the mouth, and it is a well-known fact that a fish hooked in the mouth will fight longer and harder than one that has been hooked in a vital spot.

I will be glad to answer to the best of my ability any queries made in regard to the Texas fishing, as I firmly believe that it cannot be excelled. My address may be obtained from FOREST AND STREAM publishers.

W. M. S.

### Mississippi Tarpon.

BILOXI, Miss.—Now that your angling contributors are beginning to talk of tarpon, it may interest them to know that we have tarpon fishing here. One day this autumn a tarpon measuring 6ft. 4in. long, weighing 96lbs., was taken here on a rod and reel by Messrs. R. V. R. Schuyler and Wallace Montross. The fish was captured only after a hard fight lasting upward of three hours, during which time he led his captors a chase of nearly three miles. He was hooked from a wharf in front of the Montross Hotel and was followed in a small skiff until he was finally landed. The channel runs close to the beach at this point, and when the tide is running its strongest, either flood or ebb, thousands of mullet and sardines pass up and down stream on their way from the flats to deeper waters of the gulf. It is then that the tarpon, or silver fish as they are called here, bite best. They can be seen striking and jumping out of the water close to the pier heads in pursuit of their food. The best bait is a live mullet, which is fixed on the hook by passing the point through the opening behind the gills, and allowing it to come out of the mouth. In this way mullet can be kept alive for a long time. The bait is cast out a short distance from the wharf, and is allowed to swim about close to the surface. The tarpon takes live bait very much as does the black bass the fly, jumping out of water the moment he feels the prick of the steel. His runs vary from 200 to 400ft., always ending in one of the terrific jumps that only a tarpon can make. It is a beautiful sight as he emerges from the water, his scales glistening like molten silver. He is game to the last, fighting until the gaff is driven into him, and he is drawn into the boat. The writer, who has caught tarpon on the lower Florida coast, considers this point for many reasons far the better for tarpon fishing. These fish certainly are more difficult to catch here, possibly owing to the fact that the water is cooler here than further south, making the fish more active. In addition to this the style of fishing, viz., the using of live bait is far more exciting than still-fishing. This portion of the gulf coast is easy of access from any of the Northern and Western cities. The accommodations are first-class and there is no difficulty in procuring bait and boats. The best season is during the months of August, September, October and November, as during these months the tarpon fairly swarm in these waters. Any one visiting Biloxi for this kind of sport can be absolutely certain of hooking one or more of them every good day. S.

# Fisheulture and Fish Protection.

### The Maine Commission.

THE Maine Fish and Game Commissioners have submitted their biennial report to the Governor and Council. It is a report that the people of the State should be proud of. In regard to landlocked salmon, the report says that stocking has been very satisfactory. The number of parent fish entering upon the spawning grounds and coming into the weirs on Crooked River have doubled during the past three years, as shown by the number of eggs taken. In all waters of the State where these fish have been planted for a term of years sufficient for natural developments they have appeared in large numbers, as compared with the amount of the original stock, and in many places are propagating themselves by natural processes.

Stocking the Penobscot River with sea salmon has been pre-eminently successful. Twelve thousand sea salmon were taken in the weirs of the Penobscot River and Bay and in its pools during the season of 1894. These fish sold in the markets of our Atlantic cities for a price ranging from 25 cents to $1 per pound. At the average price of 25 cents per pound, this fish product would be worth $45,000. The cost to the State of keeping up this industry is $600 per annum or less than 1½ per cent. of the selling price in the market.

The Commissioners say that the best results can be obtained by closing the streams that feed ponds and lakes and stop all fishing for trout till May 1; cut down the number of pounds of these fish the angler may have at one time, stop the market for trout and landlocked salmon and, with what facilities we now have for stocking our lakes and ponds, we will always have them with us in good numbers.

In regard to the big game of the State the Commissioners say:

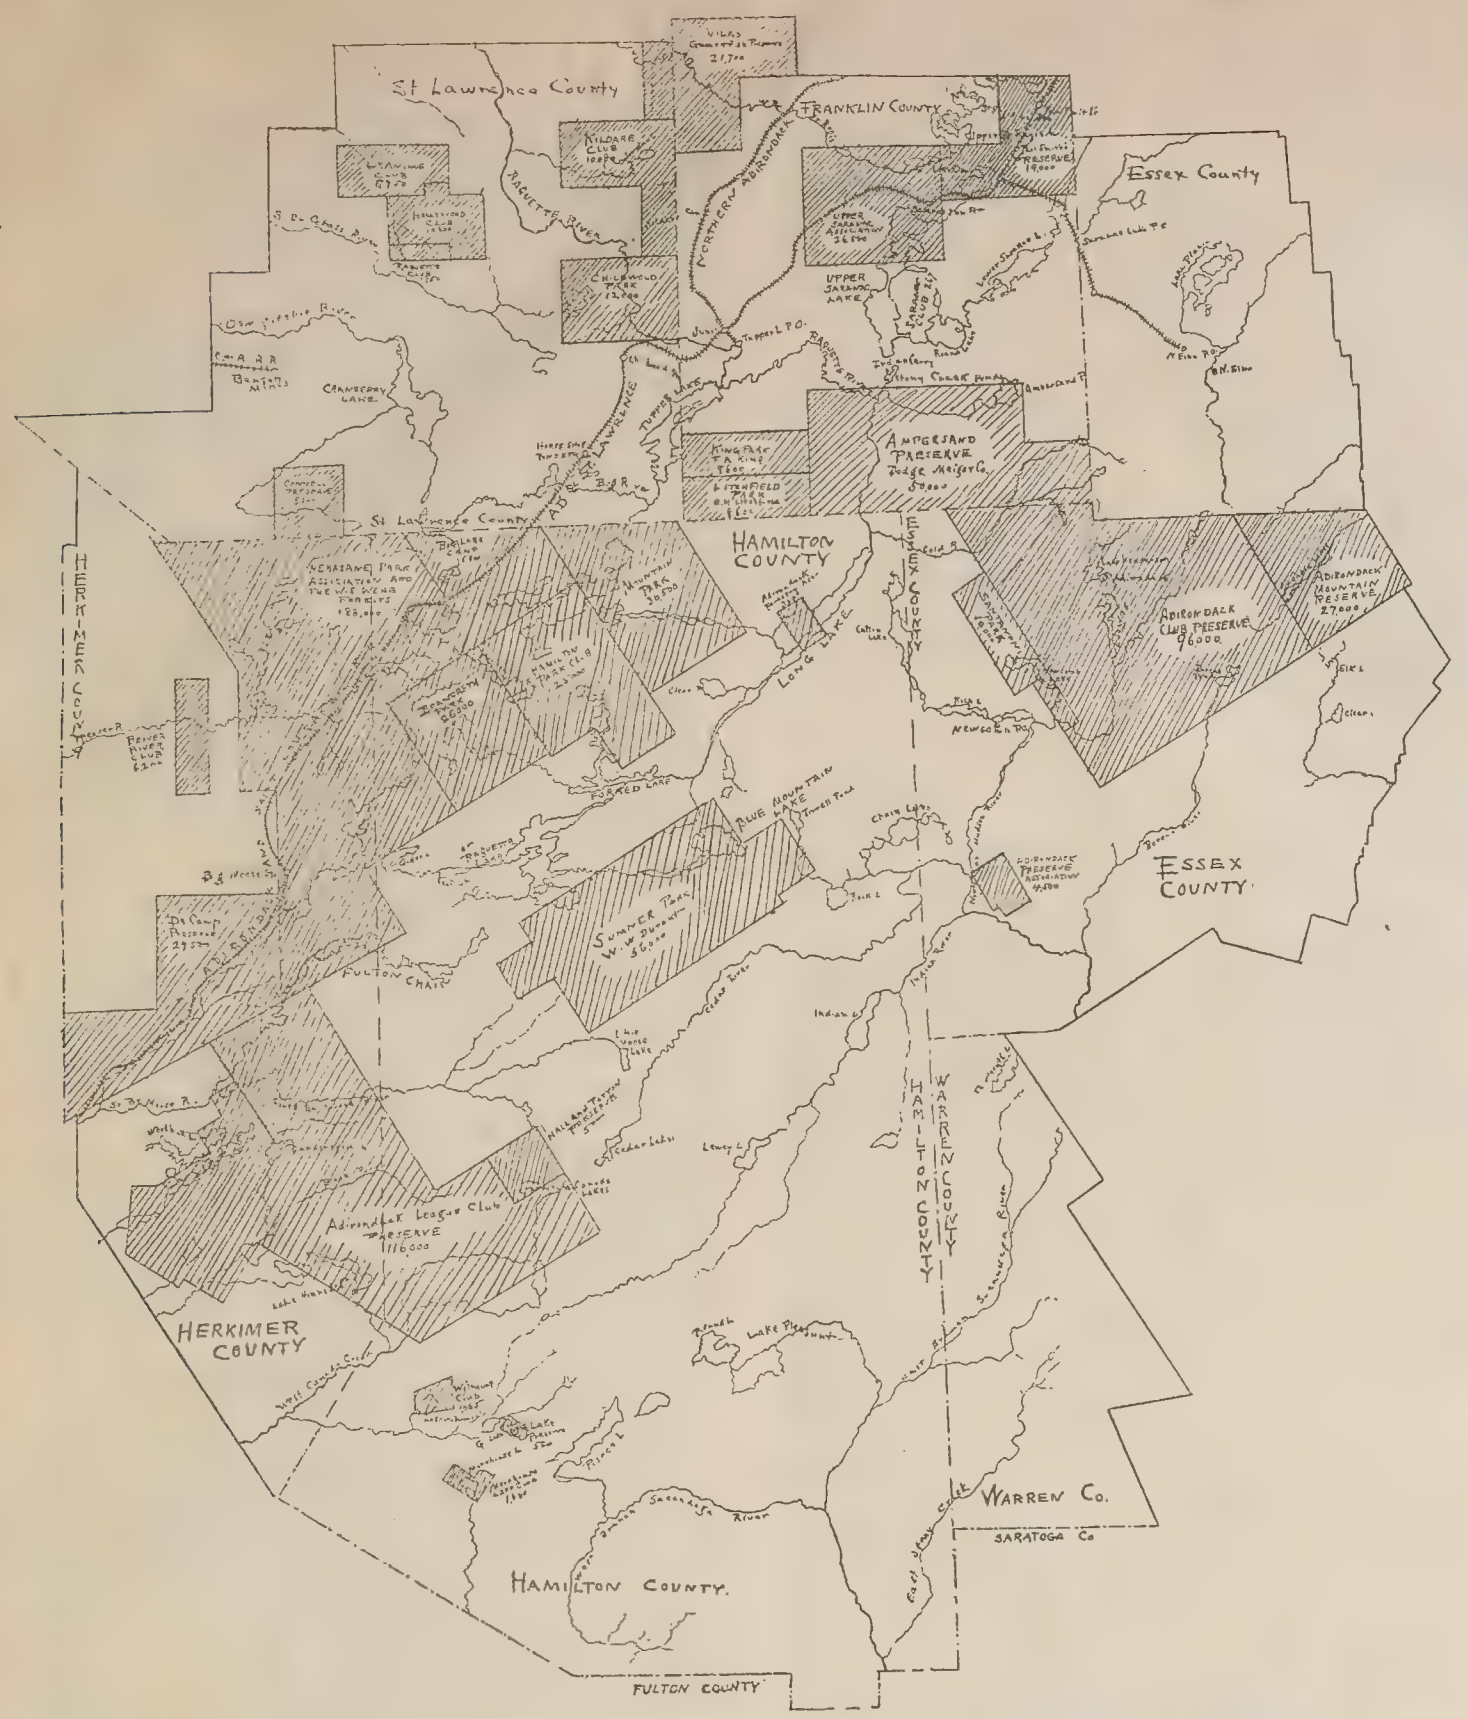
"The large game of the State, by which we mean the moose, caribou and deer, is, without doubt, increasingly abundant. From the most reliable information gathered from statistics furnished by express companies and common carriers at important points in our State and from personal inquiry and observation, we think it a conservative statement that for the open time of 1894, 4,000 of these animals will be taken. During the fifty days ending Nov. 21, 800 were shipped by express over the Bangor & Aroostook Railroad in cars running from Houlton to Bangor. Moosehead Lake regions and west over the Canadian Pacific to the Canadian line furnish as many more. Hancock and Washington counties, two of the best deer counties in the State, are not far behind these figures. Then going west through Somerset, Franklin and Oxford counties, we have another equally large supply of this game. Outside of these principal sections, there are scores of towns in the State which, while they are thickly papulated, are at the same time well stocked with deer. These estimates represent what have been taken and brought out of the forests and no account is here made of the large number of deer that have been killed and consumed by parties while on hunting trips.

"There have been taken in the State this year about 100 moose and 200 caribou. Of these probably one-third, at least, have been cows.

"The number of those who hunt and kill our large game is increasing from year to year at the rate of 25 per cent. annually.

"What is the value to the State of its fish and game interests? Various estimates have been made, ranging from $3,000,000 to $4,000,000 per anumn. The Commissioners state that they know that each year there go to Rangeley Lake region 5,000 sportsmen and hunters. They tarry on an average ten days each, and the average expense to each person from the time he enters the State until he departs is $75, aggregating $375,000, while $50,000 per anumn is paid to taxidermists. In looking over the field the Commissioners are of the opinion that $3,000,000 is a reasonable and modest estimate of the money left in the State every year by visitors attracted to Maine by fish and game interests."

The Commissioners will ask for $30,000 per anumn for the next two years for the propagation of fish and the enforcement of the law for the protection of fish and game.



SPECIAL.

### Lobster Shorts.

A BOSTON exchange of recent date reports: A tugboat steamed down Boston Harbor yesterday afternoon, and when several miles off the Brewster Islands, slowed her speed. Several men were gathered round a pile of barrels stored aft, and as the tug lost headway proceeded to dump the contents of the barrels into the sea. There were 17 barrels in all, and they contained no less than 3,328 lobsters.

To whom they belonged is a mystery, but they were what are technically known as "shorts," and were seized by State Officer Proctor at the Providence station. The lobsters were consigned to a New York firm, and probably came from Maine waters, although this is not known. No person has put in a claim of ownership, and no person is likely to. The law requires that lobsters, when offered for sale, shall be at least 10½in. in length, and every one of the lot captured was by actual measurement below the standard.

This is the largest seizure of this kind ever made in this State, and, so far as known, in New England. Could the shipper of the lobsters be arrested and convicted, he would be liable to a fine of not less than $16,610, for the law provides that any person in whose possession short lobsters are found may be fined $5 for each lobster so found. It is pos-

## FIXTURES.

### DOG SHOWS.

1895.

Feb. 19 to 22.—Westminster Kennel Clu nineteenth annual show, at New York. James Mortimer, Supt.

Feb. 26 to March 1.—City of the Straits Kennel Club, at Detroit. J. W. Garrison, Sec'y.

March 5 to 8.—Mascoutah Kennel Club, at Chicago. J. L. Lincoln, Sec'y.

March 12 to 15.—Western Kennel Club Co., at Denver, Col. E. T. Welant, Sec'y.

### FIELD TRIALS.

Jan. 14.—Pacific Coast Field Trials Club, at Salinas, Cal.

Jan. 21.—United States Field Trials Club's Trials B, at West Point, Miss. P. T. Madison, Indianapolis, Sec'y.

Feb. 5.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.

Sept. 10—Manitoba Field Trials, at Morris, Man. John Woolton, Manitou, Sec'y.

### Work for Terriers.

*Editor Forest and Stream:*

In your last issue I read with the greatest interest the letter from "Terrier," and think he has voiced the sentiment of all true lovers of that gay little breed. Indeed, it is true that owners of terrier kennels place almost all their interest in breeding and exhibiting them, and put them to very little use or sport. But are they to blame? The only records we can obtain of the real use of the terrier for sport were written several years ago, and praise him for his courage with the fox, the badger and other such animals; also of his valor in dispatching all kinds of vermin. Now, let me join Mr. "Terrier" in requesting information as to what sport we can put our dogs to. There are no fox hunts, wherein a terrier is of use; badgers have long been more than scarce, and now pray tell us of the other animals. Let it be remembered that we live in the Eastern and most densely populated section of this country, and where, it has been my experience, the larger varieties of vermin are even scarce. I had to advertise a cash price for live, uninjured rats to give my terriers work. This puts it pretty strong; but if I can be informed of any place within reasonable distance of New York where one could obtain good sport with one's terriers, in what manner and what season, I should take pleasure in it, and surely give my dogs an opportunity to show they are not mere pets. Other breeds have their field trials and coursing meets; why should not the terriers have some opportunity to show their worth in true sport? I feel sure that terrier owners would only be too glad of any opportunity to test their dogs if (that awful, small and all-important word) it could be made possible to have such a test on suitable game—no rabbit coursing or even rat catching—the first for another breed and the latter but tame sport at the best.

Let them have a go with a coon might be suggested; that I deem only as an education for the terrier, as a sham battle is for the soldier. A coon is kept in some kennels and is excellent in a way, but hardly rare sport for man or even dog. The dog after a time tires of his futile attempt to "do the coon," and the coon soon realizes the dog will not be permitted to "chew" him, and concludes wisdom the better part of valor and "lights out" until cornered, and then makes a weak attempt at resistance; at this stage of the game one must procure another coon. A good coon and a couple of terriers that know what manner of animal he is, will afford some sport if let loose together on a meadow, but coons are none too plentiful, have to be trapped and probably obtained from some distance. This reminds one of fox-hunting with "imported" foxes.

Now my plaint is sung as an addenda to Mr. "Terrier's" letter, and it remains but for some of your readers to help us out, and then, I feel sure the terriers will show they have lost none of their courage by lack of opportunity to display it.

TRICK II.

*Editor Forest and Stream:*

I don't think that "Terrier" would have much sport or success in killing muskrats with terriers as I believe the holes are usually under the water's edge. The only terrier that could be depended upon to tackle the muskrat while swimming under water would be the Irish terrier, which I have seen do the trick with a water rat. Very good sport can be had, however, with ferrets after the common house rat and water rat.

In days gone by, in England, I have enjoyed many an afternoon's sport with a few terriers and a ferret among the rats that infested old barns and grain stacks on the different farms in my vicinity. And surely the same conditions obtain to a greater or less extent in our country districts.

One afternoon's sport remains indelibly fixed in my memory, and perhaps a description of it may afford a suggestion that if followed up by some of the terrier men will give them the sport they wish. A bean stack had lain unmolested for a couple of years, the farmer waiting for a rise in values before marketing his beans. From knowledge gained in previous experiences I kept an eye on that stack, knowing that it was infested with rats that had been attracted by the toothsome bean. Strict injunctions were laid on the farmer to let me know when he decided to thresh out the stack.

Finally the farmer divined that he had waited not wisely but too well, as the well fed rodents had literally honeycombed the stack and left little but the stalks, though to outward appearances the stack looked as good as ever. The threshing machine was started about noon, and when half the stack had been threshed the fun commenced. Four or five men were feeding the machine, and as every forkful of stalks was raised out would run a rat—sometimes three or four. I had three fox-terriers and a "sort of" bull-terrier, and for two hours it was a continual "Hi, there! Whoop!" until the last forkful was raised and eighty-four dead rats were gathered up. While the stack was high the terriers waited on the ground for the vermin and nabbed them as they tried to escape.

Many of the rats kept out of sight until the last three feet of stack was opened up, so it may be imagined the sport was fast and furious during the last half hour. Many of the rats would give the terriers a run before they could be caught and thus afforded the most exciting sport. I did the farmer a good turn in killing off so many pests and at the same time enjoyed such pulse-quickening sport as would delight even the most blasé sportsman.

Surely around Boston, within an hour's ride, there are lots of old farm buildings, the owners of which would be only too glad to have them cleared of the vermin that infest them and, with a couple of ferrets and half a dozen terriers trained to ferrets, any amount of fun could be enjoyed. A tough old water rat will give a fox-terrier all it can manage for a minute or two, if not nabbed properly at the first jump, especially if tackled in the water. These are usually found in old mill races and signs are easily seen in any old streams. Half the charm of an afternoon's sport of this description is in seeking for it, watching the work of the terrier in finding the "lay up." Then when a good mark is made, the turning down of the ferret and the study of the dogs in their various attitudes of suspense, recompense one for the slight exertion entailed, even if the ferret does not bolt a rat; some other hole may pan out better. Such sport as this brings one nearer to one's dogs and affords one an opportunity to study their character, their different degrees of courage and other traits all interesting to the man who loves his terriers.

With muskrats I have had no experience, having killed but one and that was with the aid of a great Dane, Faro that was shown at New York in 1881 as a "Danish Lion Dog." This rat came to the kitchen window one winter's night, from a small stream 50yds. away. The dog was lying in front of the kitchen fire, asleep, but heard the slight clink of the rat's claws against the window pane as the latter raised itself on its hind legs to peep in, attracted probably by the light. The dog jumped up in time to see the rat disappear. I had come home late and was putting "in" a nightcap before going to bed, and it took me a second or two to unlock the door and let Faro out. He raced round the front of the house and caught the muskrat half way to the stream. This was the smartest piece of work I ever saw in such a large dog, but then he was an active racily built great Dane, and not what Mr. Heppner would term a "butcher" dog.

### Bloodhound Trailing.

*Editor Forest and Stream:*

I am pleased to see, from the notices which from time to time appear in your columns, that the English bloodhound is gradually forging his way to the front and is likely to become a favorite in America. He is one of the noblest and most majestic appearing dogs in existence, and as his great intelligence, docility, sagacity, affection and trustworthiness become better known, the bloodhounds will certainly supersede some of the fashionable dogs of the day.

It is surprising how little encouragement is given to this breed at dog shows. At Rhode Island, for instance, only two prizes were given, while for such minor breeds as terriers the prizes were far more numerous. The English Bloodhound Club of America has given this breed a wonderful impetus, but its members unanimously decided not to send a single bloodhound to Rhode Island. I think the management could have made a great hit by offering a prize for trailing a man by bloodhounds. The exhibition of the dogs working would have been highly interesting and popular.

A well-known Philadelphia bloodhound fancier was lately on a visit to Dr. Lougest at his Mount Vernon Kennels, when he made a bet of a new hat with the worthy Doctor that his bloodhounds could not find him. He got an hour's start and the night was pitch dark. He dodged about in and out of the woods, etc., but the dogs found him easily, and he lost his hat.

I had a similar experience recently at Dr. Lougest's lovely place near Franklin, where I witnessed a most interesting and remarkable display of the wonderful way in which a bloodhound can trail a man. I started out from the farm about 9 A. M. and told no one which direction I would take, except that I would leave by the front gate and emerge on the public road where there is constant traffic of horses, cattle, dogs, sheep and men. I walked down the road about half a mile then leaped a low stone wall into a wood, where I zig-zagged in and about for ten minutes. I then walked on the stones down the dry bed of a stream for a quarter of a mile, came out on a large field of natural grass and ran over that, circling about and retracing my steps, took to the woods again and then finally wound in and out of a large field, well covered with large shrubs. Then I jumped on top of a large cairn of stones were I could see without being seen. I had nearly two hours' start of the dogs before they were put on my trail, but they followed it full speed, taking every curve and turn which I had taken; it was a lovely sight to see them, every muscle quivering with excitement; now and again one hound or another would pause for an instant, at fault, and then be off again with a deep-mouthed note of satisfaction at having regained the scent. They finally located me on top of my stone fortress and made the air reverberate with their melodious baying, which they kept up until the arrival of Dr. Lougest and his keeper on the scene. I made no preparation whatever for the trial, the dogs had not seen me at all the morning I started, I wore ordinary apparel, and I mentally thanked my stars that I was not a criminal and Dr. Lougest was not a detective on my trail with his lovely pack of English bloodhounds.

BOSTON, Mass.

### Beagles Shot.

*Editor Forest and Stream:*

To "Quaker" I would say that Sedgwick was bred and sold by the Hornell-Harmony Kennels and was trained by C. S. Wixom. I am the proprietor of the Hornell Kennels; I kept the spaniels, etc. Mr. Wixom owns the Harmony Kennels and kept all the hounds. We were partners for six years.

I wrote that *we* bred and trained Sedgwick, but the compositor got it *I*. With this explanation, I hope that "Quaker" will not lose any more sleep in regard to who bred, owned, trained and sold Sedgwick.

Our mutual friend, W. J. Higginson, of Rochester, told me that if I wrote again *re* Sedgwick, to say that he would also give $5 or $10 toward a fund to prosecute the killer.

J. OTIS FELLOWS.

HORNELLSVILLE, N. Y., Dec. 13.

## POINTS AND FLUSHES.

*[By a Staff Correspondent.]*

### Before and After Taking.

IT is a matter of congratulation that, in the present day, the sportsmen who are supporters of and competitors in field trials, accept the judges' decisions pleasantly and as being final. It was not always so. There were times when the judges' decisions were all wrong in the opinion of many competitors, though they never advanced their contention as a matter of opinion but as a matter of fact.

While the transition from the chaotic state, in which many competitors made the mental reservation to accept the judges' decisions if in their favor, or to show the utter incompetency, prejudice, favoritism or interest if the decisions were against them, has been slow it has been sure.

At the field trials of the present season, there has been less "kicking" than in any previous season. What little of it there was had a milder coloring and more temperate tone, and it was less open. Palpably the day of the kicker waneth.

It may be said that the judges are better and that therefore there is less cause or no cause to kick. That I do not believe. The judges have been good judges for several years. Often the judges were used merely as a cloak to the real reasons, which were many times keen disappointments for commercial reasons, or were from the owner's own standard of affection for his dog and unbounded tolerance for all his faults and errors, with an exaggerated estimate of what good work the dog may ever have done, a standard entirely at variance from that which a judge must use when judging a competition at a field trial.

Herein no doubt was the source of much of the owner's dissatisfaction. He has seen his Duke XXV., a dog of ninety-three crosses of a winning sire in his pedigree, black, white and tan of the brightest and most distinctly correct color, a winner at a bench show and costly as to purchase money, loved by the children and the only dog which his wife thought to be worthy the privileges of the parlor—he has, I say, seen Duke make some excellent points when he had the work all to himself and had favorable conditions. He forgets that in a field triai there is another dog running with Duke, and that he may take all the work away from Duke, or that he may, by self-will or awkwardness, destroy all opportunities for Duke, or that, sad to relate, Duke may be feeling slightly indisposed and is not working up to his best private work, or still more sad, he may be working against some coarse-grained brute, which will go into briers or mud, where a real nice dog of proper refinement might hesitate to enter, with no more inducement for the venture than a few unpedigreed birds. All these things Duke's owner seems to forget, it may not be improper to say that he never knew them.

Of much the same stripe is the owner who writes to the papers with a courtesy which simply veils acrimonious temper and insinuations of dishonesty, prejudice, self interests or prejudgments on the part of the reporter. Has not his dog run before in trials? And did he not do so and so? And did not that same reporter say so and so of him at those times? and so on, *ad nauseum*. There seemed to be every reason advanced except the sole one, that the reporter might be right.

The work of a dog is not a fixed quantity. Even if it were so, in competition it would be only relative. But in all the rapidly varying circumstances of a field trial, where necessarily there is but a limited time in which to crowd all the competitive detail, the stay-at-home owner and the field trial management must have widely different standards. Not that field trials are infallible tests. They are, nevertheless, very good tests. Under the spotting system it is possible to give a dog a most thorough trial and at the same time guard against the element of luck so far as it is possible.

If an owner sends his dog to a trial he agrees to abide by the conditions of it, and it would be in better keeping for him to observe his agreement. If the report of the trial does not equal the bright rose-colored dream of his fancy let him rouse himself from his slumbers and make a vigorous self-examination. Let him cancel the depreciated value of his dog if his turn of mind be commercial and set that off to his own bad luck or bad judgment. Let him cancel his love if his love for his dog is his standard, as that love is no part of the competition or its legitimate history; but if his nature is such that he must object, or else swell unpleasantly, let him at least endeavor to be civil and just.

NEW ORLEANS, La., Dec. 8.

### Shall it be Speed or Nose?

*Editor Forest and Stream:*

In your valuable paper of 15th inst. I read an article written by Mr. G. A. Buckstaff on the relative meriting qualities of speed and nose in beagles.

I regret that I cannot admit being entirely carried away with Mr. B's argument. He says that the aim among breeders who desire field trial winners is to "get speed at all hazards and get nose if you can," and this is not the kind of a dog to get rabbits with.

Now, to substantiate his argument, Mr. B. says he sent his dog Royal Rover to the National Beagle Club trials this fall as an object lesson. He says that in the first series Rover defeated Nell R., and from all reports did it easily, and she won the Derby. He must have possessed considerable speed to do that. Right here I wish to call Mr. B.'s attention to his first mistake. The judges were working on the spotting system and, as a positive fact, I know they did not make the mistake of announcing winners of heats or in any way give their opinion as to the respective merits or demerits of any dog previous to their final awards. Mr. B. err's in reading the opinion of some "would-be reporter" in taking it for granted that the reporter's opinion is also that of the judges.

To further prove my assertion I will quote again from Mr. B.'s letter, in which he says that the "only other dog he (Royal Rover) had a chance to run against was Buckshot, the winner of the All-Age Stake, and after a hot heat it was decided that Rover had the best nose, but Buckshot was too fast for him." Now, in justice to the judges, Messrs. Turpin and Lewis, does Mr. B. believe that they rendered this decision, and if so, in the sense and with the meaning that his letter implies?

With speed enough to beat the Derby winner, a better nose than the All-Age winner, he says his dog was dropped out of the class. Now, this smacks strongly of a "kick," and I don't believe he means to be a kicker. I also believe his motive in writing his letter is honest.

Now, the Derby class of the National Beagle Club's 1894 trials had three starters; and his dog, we will admit, beat the winner, does that follow that he should defeat twelve other starters in the All-Age stake? Mr. Buckstaff assumes that his dog had speed enough to beat the Derby winner and he takes it for granted that his dog had a better nose than the All-Age winner, because probably some "reporter" said so, and his deductions are that his dog was not properly placed by the judges. Does Mr. B. believe that speed credit is misplaced when one dog is in the lead and going right along accurately on the trail, as proven by the slower dog, with the better nose following exactly the same course, but considerably in the rear and with much noise and ado?

Mr. B. says we get speed and sacrifice nose. I say that a dog who has speed must have nose and a most terrifically sensitive one to carry the scent deposited by the fleeing rabbit ahead of the speedy dog or he could not adhere to the trail as closely as the five dogs did that were placed ahead of his dog at Hempstead last month by honest judges.

That letter implies in a general way that greater credit is, or was, given to the speedy dog, who otherwise considered holding to the trail a very inferior, secondary matter; in other words, a dog who slashes and dashes around through the brush, making much noise, with the rabbit behind him. Now, which would he prefer—a pack that will start game and in a leisurely way (but holding the trail accurately) bring the game to his gun in say forty, fifty or sixty minutes, without having increased the throb of his pulse one single beat (normal 80°), or a pack that will start game and in an eager, pushing, crowding, bustling way (but holding the trail accurately) bring the game to the gun in five, ten or fifteen minutes, with pulse beating from 150 to 200, your cap on the back of your head or on the ground, every nerve strained, your hands clutching the gun, your eyes bursting from the sockets in your endeavors to catch a glimpse and a shot at the thoroughly alarmed rabbit going for dear life 50ft. ahead of your speedy pack with "speedy" noses? Whew! I had to stop here for a minute, as I had mentally followed this pack, and was in about the condition that "Canada Gray" must have been when he called a halt for water at Oxford.

Now, I contend this hue and cry about speed without nose is all "poppycock," and, as a matter of fact, it is really a physical impossibility. I, for one, will boldly say that I want the dog with speed and nose, and I believe that 95 per cent. of those who use beagles are in the same mind. Let us wait and see what others have to say. H. L. KREUDER.

NANUET, N. Y., Dec. 13.

*Editor Forest and Stream:*

I have just read Mr. Buckstaff's letter in your issue of Dec. 15, entitled "Shall It Be Speed or Nose?" In reply let me say that it shall be neither one nor the other, but a combination of both. Speed and nose, those are the qualities for which the great majority of beagle men are searching, and in my opinion rightly. Mr. Buckstaff says, "If the beagle is to be developed for use in the field and beauty of form, our field trials will bring about the desired result," and implies that the "gaunt, long-legged, terrier-looking dogs," of which he has previously spoken, are the ones that win the majority of prizes in our trials. That is a subject on which I desire to say something later—provided no one else gets ahead of me—but in this note I merely wish to reply, as far as I can, to the questions which he puts to the judges at the last National Beagle Club trials at Hempstead, of whom I had the pleasure to be one.

He says, "Now, I should like to ask the judges * * * at what point in the scale of field trial virtues in a beagle they drop speed and credit nose, and at what point they drop nose and credit speed?" In reply let me say that the moment a beagle outruns his nose, goes so fast that he cannot carry the trail, that instant speed is dropped and nose credited. There is no point at which nose is dropped and speed credited, for a beagle without nose is no beagle at all, whereas a beagle without speed may be a fairly good hound. A good example of the hound that outran his nose at these trials was Millard. I doubt if there was a faster beagle on the grounds, but he did not or could not use his nose—consequently his speed was no advantage to him. He did not even make the second series, though according to "Buckstaff's" reasoning he ought to have been among the winners.

Mr. Buckstaff in his endeavor to prove that "speed is about all that is wanted," says: "In the first series Rover defeated Nell R., and from all reports did it easily, and she won the Derby. He must have possessed considerable speed to do that. The only other dog he had a chance to run against was Buckshot, the winner of the All-Age stake; and after a hot race it was decided that Rover had the best nose, but that Buckshot was too fast for him. With speed enough to beat the Derby winner and a better nose than the All-Age winner, Rover was dropped out of the class and five dogs placed over him."

If all this is correct, no wonder Mr. Buckstaff "wants to know how you decide on the winner." Let us look at it. Royal Rover did not defeat Nell R. easily. On the contrary it was a very close thing between them in a race which was run at a time when Nell was tired out—she was only a Derby dog remember—on her long, hard run in the swamp on the previous day. Had Nell shown her true speed in this race—which she did show later in her Derby race—Rover would not have had a place in the second series.

Now for the Royal Rover-Buckshot race. Who "decided" that Rover had the best nose of the brace? That was not the opinion of the judges, and no one else had any right to make any decisions and no one else did make any. The facts of the case are that Buckshot showed fully as good nose and fully as good hunting sense as Rover, and far greater speed. But his speed was not so great that he outran his nose. In the race he led most of the time, picked out the great majority of the turns, and taking into consideration all the desirable qualities that go to make up the hunting beagle, was an easy winner.

Mr. Buckstaff's statements, which he makes as facts, and on which he relies to prove his case, are not facts at all, and any argument based on them necessarily falls to the ground and is unworthy of consideration.

I have not the pleasure of Mr. Buckstaff's acquaintance, but nevertheless I hope he will accept my congratulations on his election to the State Legislature and my earnest hope that his speeches and arguments in that body may rest on facts and not on imagination. BRADFORD S. TURPIN.

### Judging at the W. K. C. Show.

*Editor Forest and Stream:*

In the Dog Chat notes of the Dec. 15 issue of your valuable paper, I note remarks on proposed regular daily scheme of judging at the W. K. C. coming show.

I fully agree with you that such a scheme would greatiy obviate the rush and confusion which is the rule under present conditions, during the hours of judging. But you go further and suggest a schedule, which begins with St. Bernards and mastiffs on the first day, and so on to the third day, when you would judge terriers.

So you would place the terriers on the third day, and judge the big breed first, thus leaving these little tykes to worry out their soul and patience, while their big relations, who are a thousand times more comfortable on their benches than when bothered by hurrying handlers and judges, are having their innings.

I am a terrier man, I admit, and there are probably some of your readers who will say I am partial in my opinion when I state that terriers should come before the larger breeds.

To such I would ask, have they ever attended a big dog show and failed to notice how Master Terrier chafes at confinement on his little plank, and how much sooner he loses that appearance of gayety and sprightliness, so essential to his good form in the judging ring, than his larger brothers?

On this single point I suggest that you should place the order of judging according to the temperament of the breeds, placing those first whose appearance as to "fire" and "go" are most essential and most easily worn off by confinement. THE TYKE.

NEW YORK, Dec. 20.

The pair of Persian spaniels presented to James Gordon Bennett, while on a recent yachting trip, partake a good deal of the character of so-called Mexican spaniels, one or two of which have been shown at Boston shows. In general formation, especially in head and carriage of ears, they remind one of the Chihuahua with the addition of a silky coat.

## DOG CHAT.

*British Fancier* speaks of Mr. Taylor making a long overnight journey from Guilford to Chester to be in time to judge at the latter place. This would be a short trip to some of us who are accustomed to "do" the shows in this country during a busy circuit. Reporting Chicago show for FOREST AND STREAM, for instance, entails a journey of 2,000 miles.

Pathfinder, who lately returned to his native country, was shown at the South London Bulldog show, Nov. 13 to 15, where he won second to the well-known Facey Romford, the latter beating in body and general formation, though in shortness of face and underjaw Pathfinder simply smothers Facey Romford. An upset which seems to have rankled Mr. Ellis was the placing of Dimboola, Facey Romford and Monkey Brand over Guido, who under Mr. Berrie and Mr. Jackson beat everything at the Bulldog show and the Crystal Palace. Mr. Ellis thereupon refused to play any more and Guido was not allowed to be shown in subsequent classes. Mr. Pybus-Sellon's Dimboola, who has only been shown twice before, won the championship and seems to be the coming dog. He is a white dog with lemon markings and possesses a large well-shaped skull, good square muzzle, large nostril, excels in chop, which is well cushioned up, shoulders and forelegs perfect, is built low to the ground, out at shoulders and in body is thick set and cloddy, a little more wrinkle and a shorter back would, it is said, improve him. Guido is said to be too high on the leg and his ribs are not properly sprung. In fact, the bulldog world in England seems to be divided on the question of type and which is correct, the low cobby dog or the high stilty long one.

Judging from the reports of the Crystal Palace shows, the rough St. Bernards are not making so much improvement as the smooths. We fancy the same may be said over here, and if a little more attention were paid to the smooth stud dogs, the result would be seen in more quality and truer type among the young rough stock. There should not be this fear of using smooth dogs or smooth bitches for breeding purposes, for it is just as likely that there will be as many roughs as smooths in the litters.

"John Bull" in *British Fancier* says that nearly twenty years ago at the first grand annual show of bulldogs (which was promoted by the Bulldog Club) the winner of the champion gold medal for the best dog in the show, Mr. Joice's Bacchus, with 79 marks, was a Dudley. At the Aquarium show with an entry of over 200 not a single Dudley was benched. How are the mighty Dudleys fallen, and a good job, too!

Mr. Foster's champion pug Bradford Marvel has won 51 firsts, 14 seconds and 21 specials in little over a year.

Dr. Turner's remarks in regard to the great Danes are also to the point. After commenting on the lack of quality in many of those shown, he says: "Of all the giants of the canine race a great Dane is that in which we ought to see beauty of outline, grace of form and elegance of movement. The type still varies considerably * * * in my opinion there should be that combination of strength and agility which, avoiding on the one hand the heavinees of the English mastiff and on the other the lightness of the greyhound brings into prominence the best points of each in modified form." In alluding to the great Dane in its native country he combats the idea that it is a heavier, deeper-muzzled and more lippy animal than they are in England, drawing his conclusions from those he has seen in Bavaria and clinches his argument by saying that the average dog one sees in Munich or Stuttgart is much better grown and sounder on his legs than the average specimen shown at exhibitions in England, nor is he heavier in skull nor deeper in muzzle. Those who look to England for a correct type of great Dane should ponder over this.

In his report of bloodhounds, Dr. Turner speaks well of Mr. Brough's Bardolf. His head is a perfect study of form expression and color, with ears placed and falling quite exactly *de rigeur*, and in wrinkle and expression he is even better than the late Burgundy. In speaking of the cross of Babylon and Coombe Bismark that Mr. Beaufoy resorted to, the effect of which is shown in the bitch What's Wanted, Dr. Turner remarks: "That this cross made by Mr. Beaufoy was a valuable one there is no doubt, and in another generation or so no trace of it will be visible, while the result, improving the constitution, will remain. It is astonishing how little of foreign blood is necessary to create a greater resistant power to disease. This is shown in the fact that a few cubic centimetres of blood serum from an immunized animal will protect another who is susceptible, nay, even suffering from a disease, if used in time."

Mr. J. Hope, of Philadelphia, who has long been an advertiser in FOREST AND STREAM, has removed his kennels to 29 North Ninth street. His store is 70ft. long and his new kennels in connection with it are 65ft. long. The store and kennels are located in the central part of the city. In addition to dogs he deals in nearly all kinds of fur-bearing animals, fancy cage birds, poultry, etc. Mr. Hope must not be confounded with those Philadelphia dealers who run as far as they can go under one kennel name and then try an alias. Visitors to his store and kennels have the opportunity to select their purchases themselves, and can rest assured that they will receive fair treatment.

The sale of Irish setters and collies formerly owned by the Seminole Kennels took place at the American Horse Exchange, New York, Dec. 18, but was little more than a failure. The sale was not properly advertised and few people were present beyond a dozen New York and Philadelphia fanciers, but as they were all looking for bargains and the condition of the dogs was not such as to tempt them to invest much money, prices ruled very low, many of the best were bought in by their former owner. Among the well known dogs that did not come up to the reserve mark were Curzon, the collie, who stopped at $22.50; Metchley Surprise, Bertha II., Cora of Nesseldown and Crissey did not raise a bid; Ormskirk Gypsey Maid, one of the best collies offered, returns to the kennel on a $20 bid; Montauk, Jr. raised a bid of $5 from Mr. Mortimer, while Elcho, Jr., at $17.50, also returned to the kennel. There was no offer for Seminole, Jr., and Delphinne was also bought in at $12.50. Claremont Heather, looking wretchedly thin and nursing a litter brought $25. Mr. Mortimer bought Biddy for $2 and Elfreda for $20. Henry Jarrett paid the top price, $50, for Seminole Fly, a good bitch and a winner. Mr. C. D. Bernheimer bought the hound Ranger II. for $25. Claremont Heather's puppies brought from 50 cents to $2 each, but they were in poor shape and seemed risky purchases for outsiders. We understand that the Seminole Kennels will be continued but on a reduced scale. They still own Golddust, champion Tim and other good ones.

The Bulldog Club sends us the number of votes cast for each member of the club in the recent election for club judges. The ten judges elected with the number of votes polled are as follows: John H. Matthews, James Mortimer and E. A. Woodward 19; Frank F. Dole 15; E. K. Austin 14; W Mariner and C. H. Mason 13; H. W. Lacy 12; H. D. Ken-

dall and C. D. Cugle 10; nineteen other members received votes ranging from 9 to 1 each.

Poor old Squire is dead. Wonderful old dog that he has been through a long life he has at last succumbed to the inevitable. He died of old age last Wednesday week—found dead in his kennel. This fine old collie has been a landmark in colliedom for years past and his name and reputation are household words in the collie circles of both sides of the Atlantic. He was well on in years when imported by the Chestnut Hill Kennels in 1891, shortly after winning the challenge trophy at a collie club show in London. He was afterwards purchased by the Seminole Kennels. He has been repeatedly shown lately but was a mere wreck of his former self and should have been left at home. He was counted one of the pillars of the stud in England but did not sustain that reputation over here.

A writer in *Harper's Weekly* says that the first thing that strikes a visitor to a Corean village is the surprising subpopulation of dogs: "Every house seems to possess a pack of these spiritless curs, which are a gray variety of the Chinese chow dog. They display a more than passing interest in a European traveler, and a free use of one's stick is necessary to keep them at bay. On investigation one discovers that they form the staple article of diet of the population. Unlike most Asiatic races, the Coreans are meat-eaters; and these dogs, being always at hand, afford the necessary food with the minimum of exertion and expense. Frequently one sees a Corean foraging for the evening meal. The method is simple, though unpleasant. He is armed with a short pole, to the end of which is attached a noose. This he throws over the head of the nearest dog, and then proceeds to screw the pole round till the noose tightens, and slowly throttles the dog, who is meanwhile prevented from getting to close quarters with its butcher by thrusts of the pole." This leads one to ask, Why is a dog with chorea like a Corean dog? They both suffer from the twitch.

The judges at the late Crystal Palace show in London have been giving their opinions on the classes they judged, in the *Kennel Gazette*. Dr. Turner in writing on mastiffs says the classes were well supported and some good specimens shown though some who graced the benches disgraced themselves in the ring. This in allusion to their bad action and deformed "understandings." Continuing the subject he says: "There has always been the cry that such and such a dog was very good, but was spoiled by bad rearing. This is not so often the case as some would have us believe. Bad rearing and want of exercise no doubt account for some defects; but if breeders will persist in breeding from dogs with bad legs, etc., how can they expect to get stock with good ones? How many promising puppies go wrong just when they should be going right? There is always a tendency to reproduce a defect in a young animal at the same period of development that it first appeared in its ancestors. As large dogs, like the mastiffs, are not in any case reared except at considerable expense, it is want of sound judgment to breed from imperfect animals that are not unlikely to produce this tendency in their progeny, although this is not always the case. The art of the breeder consists in selecting the best that nature has provided to his hand—not her cast offs. The fancier flies in the face of nature, and pays dearly for his little flutter in the end. But this is an old story!"

Those who attended the shows last season could not help but notice an improvement in the leg formation of most of our home-bred mastiffs and St. Bernards, and although there may be a falling off in head properties in the latter breed if we can get a good solid foundation of well-bred, good-actioned animals by proper selection, the rest will follow. We believe the day is past when cow-hocked cripples can win at the expense of animals, who, though they may not be so prominent in certain features, are nevertheless all round, well formed and sound animals, and from these should we depend for future stock. A crippled fox-terrier would soon be sent to the right about, and the same principle should hold in other breeds. It can be little satisfaction for a man to take out a dog, that, however good a head it may possess, knocks its hocks together at every stride, waddles along like a duck or carries itself as if on stilts.

The last English mail brought a letter from Mr. Edward Booth, Col. Ruppert's late kennel manager. He tells us that he attended the recent Birmingham show. Of course, the St. Bernards interested him more than any other breed and his remarks in regard to some of the leading dogs scarcely bear out the fulsom praise that has been showered on them in the English reports. He says: "Mr. J. F. Smith judged St. Bernards and I thought that some of his decisions were unwarrantable. I don't like Lord Douglas at all. (This is the dog that was hailed some time ago as the coming crack, or second Sir Bedivere.) He is a long-faced dog with little stop, mismarked head, bad front legs, has little St. Bernard character, although big and massive. I like both Duke of Maplecroft and Young Bute better. "Beautiful" Abbess carried all before her in the bitch classes. An enormous bitch, grand body, legs and feet, but wrong type in my opinion. I could not call the St. Bernards a grand muster; probably the five days' show had something to do with it. The shows here are very similar to the American, although much better managed, especially as regards sanitary arrangements and general business tone."

In regard to Mr. Booth's last remark, no doubt he draws his conclusions from the Birmingham and Crystal Palace (Kennel Club) shows; but he must have overlooked the fact that these shows stand to the fancy over there in the same relation as the W. K. C. show here, and it will be news to some of us that the latter show is in any way, unless it be in judging celerity, inferior in management to the best shows in England, at least that is what we have been led to suppose from the opinion of Mr. George Raper and others familiar with English shows.

The friends of Mr. Harry Twyford, who for a year or two was a prominent figure in our kennel world, will be pleased to hear that he has dropped on his feet, having a good position with a Birmingham firm of brewers. Mr. Booth met him at the Crystal Palace show, and describes him as a "howling swell," whatever that may be. Mr. Booth will be out in time for the New York show.

Herr Pietscher, secretary of the Doggen Club and president of the Borzoi Club of Berlin, is now on a visit to this country. He is the owner of the noted great Dane Alexander. Herr Pietscher will exhibit some dogs at the New York show, among them Peter, winner of four firsts and specials at Munich, also the Government medal. The others in the team he will show are also prize winners. In the present state of the great Dane fancy over here, when even the judges don't seem to know what they want, and if we are to settle on the German type the exhibition of these dogs should have a beneficial influence.

A kennel club has been organized at Wilmington, Del., with the following officers: President, Dr. J. Ferris Belt; Vice-President, Rev. J. A. De Ruyter; Secretary, E. W. Jester; Treasurer, R. S. McNair. These, with A. D. Orr, E. I. Martin and A. D. Peoples, constitute the executive committee.

The Detroit premium list will be out shortly. Entries will close Feb. 11.

The snarl into which the Western kennel club were fast drifting has been unravelled by the action of the Mascoutah Kennel Club in arranging the following dates: Detroit, Feb. 26 to March 1; Chicago, March 5 to 8; Denver, March 12 to 15. This makes a convenient run, Detroit following New York. Mr. Geo. H. Hill will superintend the Chicago show and will be at the club's office in the Monadnock Building, Chicago, after Jan. 1.

Letters from W. B. Wells, George F. Reed, Mrs. Williams, Pottinger Dorsey, "Americus" and others are unavoidably crowded out this week.

As FOREST AND STREAM goes to press a day earlier this week, we are not too late in wishing our readers a Merry Christmas and every prosperity in the coming year.

Another well known dog has joined the majority. This is the mastiff Ilford County Member, which was owned by Mr. W. Norman Higgs, the owner of Brampton Beauty.

Six hundred dollars for a bobtail sheepdog may be considered a very unusual price, but Mr. Megson, the pluckiest buyer in English colliedom, has just paid that amount for Masterpiece, who has won a number of prizes, including two championships.

The specials offered by the Pointer Club at the W. K. C. show have been declined. It will be remembered that the specials were subject to a club judge being appointed. This did not suit the W. K. C., neither did the conditions of the special for the best dog with a field trial record, record alone to count. This could just as well be judged in the club's office. The true interest of the breed would be better

PERSIAN SPANIELS OWNED BY JAMES GORDON BENNETT.

served if, according to usual bench show procedure the winning of such a special should depend upon conformation as well as field trial record. We should aim to improve the looks of our field dogs but giving specials at a dog show for the dog with the best field trial record will not do it.

The premium list of the W. K. C. show is in the printer's hands and will be out in the course of a few days, and next week we shall know who the judges are. It was expected that Mr. Reick would take St. Bernards, but he sails for Europe on Jan. 29, and will not return in time for the show. Had he donned the ermine no doubt a large entry would have been the result.

Mr. Mortimer has lost the Irish setter bitch Biddy that he purchased for $2 at the Seminole sale. On the way home from the station Biddy slipped her collar and escaped. The price paid was no indication of the worth of the bitch, as she is a very fair Irish setter.

The well known bench and field winning greyhound, Jenny Jones, is dead. The cause of death was pleurisy. The bitch had won over 100 prizes on the bench and her quality in the field was shown when she was one of the last four in the Waterloo Cup and also placed several stakes to her credit.

### "Forest and Stream" Fan Pedigree Blank.

FOR some time past breeders of dogs have demanded a pedigree form that would afford spaces for a more extended pedigree than those hitherto published. The difficulty has been in arranging a form that, while admitting the required extension, would be compact and not too large for mailing. This difficulty has been solved in the "FOREST AND STREAM Fan Pedigree Blank" which is so arranged that a dog's pedigree can be recorded for eight generations, and the spaces radiating from a center, the reader is enabled to trace at a glance the different strains which lead from sire and dam. Spaces are also provided for recording the name of dog, its breed, color, sex, breeder and address, dates of birth and purchase, from whom purchased, E. K. C. and A. K. C. Stud Book numbers and certification. These blanks are for sale at $2 per hundred, 30 cents per dozen, by the Forest and Stream Pub. Co., 318 Broadway, New York.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.*

H. L. M., Worcester.—I have lost a number of dogs that would be taken with a fit, snapping their teeth and frothing at the mouth. The first fit would be slight, but afterward become worse and more frequent. Would have one whenever disturbed, the fit lasting two or three minutes. Between fits the dogs had good appetites. Ans. Probably due to worms or some intestinal derangement. I presume they could not possibly get at any poison.

A. H., Albany, N. Y.—Rip Rap (14,314), by King of Kent (6,264, Vol IQ.) out of Hops, by Salter's Mike out of Salter's Romp. King of Kent, by Priam out of Kent Baby. Monterey is not registered.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Touser of Turtle Bay.* By Turtle Bay Kennel Club, New York city, for black, white and tan beagle dog, whelped Sept. 2, 1894, by Fritz of Rockland (Scottie—Frances) out of Adaline (champion Frank Forest—Ina).

*Fritz of Turtle Bay.* By Turtle Bay Kennel Club, New York city, for black, tan and white ticked beagle dog, whelped Sept. 2, 1894, by Fritz of Rockland (Scottie—Frances) out of Adaline (champion Frank Forest—Ina).

*Jim of Turtle Bay.* By Turtle Bay Kennel Club, New York city, for black, white and tan ticked beagle dog, whelped Sept. 2, 1894, by Fritz of Rockland (Scottie—Frances) out of Adaline (champion Fran Forest—Ina).

*Fifine* By L. Bätjer, Elizabeth, N. J., for blue belton English setter bitch, whelped Aug. 13, 1894, by Inspector (Rowdy Rod—Spectre) out of Devonshire Daisy (Prince of Wells—Lady Butt).

*Phrine's Kid.* By L. Bätjer, Elizabeth, N. J., for blue belton English setter bitch, whelped August, 1894, by Antonio (Roderigo—Bo-Peep) out of Lucy.

*Count Bondhu.* By L. Rausch, St. Louis, Mo., for black, white and tan English setter dog, whelped Nov. 26, 1893, by Gem Bondhu (Gus Bondhu—Model Druid) out of Cad Noble (Count Noble—Katie Berwyn).

BRED.

☞ **Prepared Blanks sent free on application.**

*Countess Addie—Ripp Gladstone.* A. D. Fiske's (Worcester, Mass.) English setter bitch Countess Addie (Count Noble's Boy—Clip Roderigo) to H. S. Wilson's Ripp Gladstone (Gun—Victoria Laverack), Aug. 19.

WHELPS.

☞ **Prepared Blanks sent free on application.**

*Adaline.* Turtle Bay Kennel Club's (New York city) beagle bitch Adaline (champion Frank Forest—Ina), Sept. 3, six (four dogs), by their Fritz of Rockland (Scottie—Frances).

*Cherry Girl.* C. G. Browning's (Worcester, Mass.) cocker spaniel bitch Cherry Girl, July 27, seven (six dogs), by his Little Vix.

*Cachon.* C. G. Browning's (Worcester, Mass.) cocker spaniel bitch Cachon (Bob Obo—Topsy), Sept. 2, seven (five), by his Ebony (Obo II.—Lofty).

*Flash B.* C. G. Browning's (Worcester, Mass.) cocker spaniel bitch Flash B., Sept. 4, six (one dog), by Swiss Mountain Kennels' champion Middy (Jersey—Chip K.).

*Daisy B.* C. G. Browning's (Worcester, Mass.) cocker spaniel bitch Daisy B. (Pluto, Jr.—Frisky), Aug. 13, six (four dogs), by their champion Cherry Boy.

*Lady Dinah.* J. C. Mahler's (Avalon, Pa.) bull-terrier bitch Lady Dinah (Bendigo—Flirt II.) Aug. 31, ten (five dogs), by J. Morehead, Jr.'s (Streatham Monarch (Streatham Flyer—Trentham Baroness).

*Chatham Kit.* S. Penfield's (West Haven, Conn.) bull-terrier bitch Chatham Kit (champion Jubilee—champion My Queen), Sept. 5, nine (seven dogs), by his Prince Gully (True Blue—Polly).

*Dot L.* C. G. Browning's (Worcester, Mass.) cocker spaniel bitch Dot L. (champion Cherry Boy—Lady Stanley), July 30, two (one dog), by his champion Cherry Boy.

*Nellie B.* C. G. Browning's (Worcester, Mass.) cocker spaniel bitch Nellie B., Aug. 12, six dogs, by his champion Cherry Boy.

*Careless.* J. D. Bush's (Wilmington, Del.) bull bitch Careless (Hotspur—Hampshire Nettle), Dec. 2, seven (six dogs), by J. H. Congdon's King Lud (Pathfinder—Plevna).

*Gipsy.* E. A. Perry's (New Bedford, Mass.) St. Bernard bitch Gipsy (Beauchamp—Zana), Nov. 25, eight (seven dogs), by H. P. Wilson's Viscount Ebrington (Keeper—Lady Miles).

SALES.

☞ **Prepared Blanks sent free on application.**

*Trim B.* Black and tan Gordon setter dog, whelped April 25, 1893, by Dixey out of Beaulah, by C. T. Brownell, New Bedford, Mass., to A. Ziegele, Jr., Buffalo, N. Y.

*Piper.* White, black and tan beagle dog, whelped March 13, 1893, by champion Fitzhugh Lee out of Lady Novice, by A. D. Fiske, Worcester, Mass., to C. B. Dobie, Sigourney, Ia.

*Clyde—Lady Novice whelp.* White, black and tan beagle dog, whelped April 23, 1894, by A. D. Fiske, Worcester, Mass., to C. P. Vail, same place.

*Red Penny.* Red dachshund dog, whelped June 12, 1893, by Hundesport's Zaenker out of Lina L., by W. Loeffler, Milwaukee, Wis., to B. Wilhelm, Elizabeth, N. J.

*Pearl.* Chestnut and tan dachshund bitch, whelped June 7, 1894, by Hundesport's Bergmann out of Lina K., by W. Loeffler, Milwaukee, Wis., to B. Wilhelm, Elizabeth, N. J.

*Lady Olga.* Black and tan dachshund bitch, whelped July 16, 1892, by Hundesport's Bergmann out of Polly, by W. Loeffler, Milwaukee, Wis., to J. Wedekind, Chicago, Ill.

*Schwarzel.* Black and tan dachshund dog, whelped July 18, 1893, by Hundesport's Bergmann out of Polly, by W. Loeffler, Milwaukee, Wis., to E. Rose, Elm Grove, Wis.

*Minnie.* Black and tan dachshund bitch, by Hundesport's Bergmann out of Miss Fortune, by W. Loeffler, Milwaukee, Wis., to E. Rose, Elm Grove, Wis.

*Gretchen.* Black and tan dachshund bitch, whelped July 18, 1893, by Hundesport's Bergmann out of Polly, by W. Loeffler, Milwaukee, Wis., to P. Galke, same place.

*Silver Bell.* Black and tan dachshund bitch, whelped July, 1893, by Hundesport's Bergmann out of Polly, by W. Loeffler, Milwaukee, Wis., to C. F. Gentz, Jr., Grand Rapids, Mich.

*Beaver.* Black and tan dachshund dog, whelped July 18, 1893, by Hundesport's Bergmann out of Polly, by W. Loeffler, Milwaukee, Wis., to H. C. Eigenmann, Muscatine, Ia.

### An Aid to Good Housekeeping.

BARTON, Vt., Nov. 18.—*Editor Forest and Stream:* Inclosed you find P. O. order for $4 for the FOREST AND STREAM for another year. Can't keep house without it. It grows better every year; and my name is on your books for the past twelve years. GEO. F. REED.

# Hunting and Coursing.

### New England Fox Hunting.

*Editor Forest and Stream:*

One of the most enjoyable out-of-door sports that we have at this season of the year here in northern Vermont is fox hunting *à la* New England style, with hound and gun.

We generally have a good supply of foxes, both native bred and migratory. The latter are foxes that come from over the lakes as soon as the ice forms, and are the hunter's curse unless he has fast dogs, as they usually, when started, lead off and keep going until caught or run in.

We have several strains of excellent native bred hounds. The black and tan are favorites in this level lake town, while the heavier-muscled blue ticked and spotted hounds are generally used in the hilly and mountainous towns east of us.

A few days ago we had a short but grand run, a red letter day, with two kills. In the pack that was out that day there were six hounds that might be called leaders—dogs that would be at the front if possible to get there.

Our meet on this occasion was held on the limestone ridges that run back south from the Missisquoi River, east of and parallel with the Central Vermont R.R. The bluff-like ends of the ridges are, in spots, heavily wooded, with deep ravines, excellent coverts for Mon. Reynard. At the northwest corner of these ridges are the Calico Marble Quarries, and west of the railroad open plains extend to the lake, and a mile to the east is a level farming country, and a mile or so south is also an open country.

The ridges are of the rugged and broken character so characteristic of limestone upheavals, partially covered with hardwood and evergreen timber, with narrow valleys of pasture land, making an ideal spot for a fox to play before the hounds. One of the hounds that was present should not have been out that day, as he had injured his back and one of his hips so that he could only hobble about on three legs. He was a small black and tan and known as the "whirlwind," as he was when all right very fleet and a fast barker. It was intended to keep him at heel during the run, but when the pack opened up he suddenly disappeared, and his cry was soon heard with the others.

They at first swung a large circle around the outer edge of the ridges, and as they approached our stand there were two foxes up, one some distance ahead of the other. The writer bowled over the first, a bitch fox, when the other, a large dog, made a break for the plains, but was so closely pressed that he was soon glad to double back among the broken ground. One of our party, who hunts without a gun, had stationed himself at the cave, a noted burrow, in time to head the fox away from it, with the dogs but a few rods in the rear. The boys had by this time covered the runways,

but the fox was so hard pushed that he could not follow the usual beats, but was dodging in and out among the rocks, and was every few minutes saluted with bang! bang!—generally at a long range, so suffered no serious harm, and as he would approach near the plains we would hear a light whiff! from some farmer boy's squirrel gun. Then a cheer from the quarries would tell that he was passing in that vicinity. After remaining fully three-quarters of an hour at my stand, we broke at a regular fox hunter's lope for a point where we were sure that he was coming, but before he arrived, he ran against Tom Anderson and William Austin, of the Highgate Gun Club, who stopped him—and one of the first dogs to seize the dying fox was little lame Whirlwind.

In a few moments a crowd of hunters, farmers and quarrymen were on the spot, all anxious to tell their experience with the fox.

Says the old veteran Cummings: "I can't understand why the deuce he didn't hole in the cave, he started for it half a dozen times."

"If you had seen me," said Ryan, "stand there and pelt him away with stones you wouldn't ask that question. I believe I could have killed the beggar, but I was afraid to throw hard for fear of hitting some of the dogs."

"I say, Jim," says one to a farmer boy, "ain't you afraid of straining that gun of yours? Why that fox was forty rods off when you pooped that squirrel squib at him."

"Fred, confound you, if you'd have kept still I'd have got him, for he was coming straight toward me when you up and blazed away right and left, fully twenty-five rods off."

"I didn't know that you was there, and he was headed toward the meadows and I wanted to turn him back, and I had in B.B.s and thought that I'd break a leg."

"Headed towards the meadows," says Rogers; "he never would have gone out there for he knew that his only salvation lay in sticking to the rocks until he could get a chance to slip into the cave." "Begor-r" says a quarryman, as he came up with a rock in each fist, "that little three-ligged divil-of-a-hound took a turn out of the fox jist forninst me. I thought that the dog had two tails but whin the fox shuck him off I see it was one of his hind futs sticking out behind; thin that big black hound, and the spotted one made a run at him, (the fox) and he jist doubled on them and they bucked their two hids against a rock. I thought they were kilt, but they lit a roar out of themselves and up and away with the other dogs after the rid divil, who was scurrying off up the hill as fast as his four ligs could carry him."

Says another one: "You know where that crack in the rocks is, south of the quarry, well sirs, the dogs were just catching him there at the bottom of the ledge when he slipped into the crack and up he went and out at the top, and the dogs had to climb up the steep rocks outside, and when that big speckled dog had got near the top, he slipped and down he went taking two or three of the other dogs with him clean to the bottom." One Canadian pitched into a brother habitant as follows:

"What for you, Mr. Peltier, go 'pish' wit dat leetle gun at de fox? He's off more dan tree acre."

This brought on an animated discussion between the two men, and after a lot more of pleasant talk and chaff among the regular hunters, it was decided who should take the pelts, and also that we were not game hogs and had sport enough for one day. We declared the hunt ended and started for home in fine spirits, excepting poor Whirlwind, who had to be helped over every wall and ditch. It is not every day that foxes play as this one did. They very often, when they get a good lead on the dogs, lead off across the country for miles; then we rush for our teams and try to head them off at some distant runway. Several times we have made two kills, besides running others into the ground.

The best dogs that we have ever seen for the hilly districts are a cross of rough-haired otter hound with the common foxhound. They seldom get footsore, are strong, and have a good nose; in fact, are the only hounds that we ever saw that would follow a fox over dry, plowed ground and glare ice, without any loss of time or break in their speed.

STANSTEAD.

HIGHGATE, Vt., Dec. 17.

# Yachting.

COMMODORE SMITH through the New York *Herald* of Dec. 23 comes to the defense of the new deed with the statement that no other than general charges of its unfairness have been made. In the course of his remarks he quotes the mutual agreement clause, but judiciously ignores the very peremptory wording of the preceding clause.

Of the specific objections repeatedly made, but of which Commodore Smith is ignorant, we need mention but two. According to a firmly established precedent of New York Y. C., as noted more fully on our editorial page, a holder cannot recognize a challenge which does not comply with the specific requirements laid nown in the deed of gift. According to Clause 5, such a challenge *must* contain four of the dimensions of the challenging yacht. The demand for these dimensions is unfair and unprecedented in yachting; no designer has ever been compelled to reveal the draft of his yacht, or even to limit this draft, without the privilege of adding outside ballast if necessary on trial. That the New York Y. C. has, under stress, waived the demand for these dimension and repudiated this portion of Clause 5, tends of itself to prove the truth of the above charge, as repeatedly urged by us and others.

Another specific charge of unfairness has been made against the "no time allowance" provision of Clause 7. Under this clause, in the case of Valkyrie and Vigilant, it was within the power of the New York Y. C., after all details, great and small, had apparently been agreed on, to have forced a disagreement on some immaterial pretext, leaving the challenger with no option but to claim his three outside races, but *without* the *two minutes' time allowance* due from Vigilant to her smaller opponent. Of course the New York Y. C. would not lower itself by such an unfair trick, but foreign clubs might not be so scrupulous in the event of holding the Cup.

THE many published statements from prominent yachtsmen in various places would indicate a general acquiescence in all the actions of the Cup committee, but we know to a certainty that there is a very strong undercurrent of dissatisfaction, even within the New York Y. C. There are many yachtsmen who hesitate to openly condemn the new deed and the actions of the committee, but who at the same time are quite alive to the truth of the many charges made abroad and at home against both, charges which cannot be refuted and which reflect on the honor of the club. There are many who, when forced in argument to the defense of the new deed, make no stronger claim than that the second deed was inadequate and that some change had to be made, with the lame excuse that British yachtsmen would have done the same thing. While they admit the defects of the new deed, they cover their reluctance to the repudiation of it by the excuse that, the "surviving donor" being now dead, the club has no power to alter it, even if it wished.

The New York Y. C. has never yet failed to find a way of some kind to do anything which it wished concerning the America's Cup and it has twice exceeded its rights as trustee in altering the terms of the trust under a very doubtful pretext, and it is quite capable of doing so again if the necessity arose. We venture the assertion that if the New York Y. C. were once finally convinced that the Royal Yacht Squadron and other British clubs would stand by their declaration that they would not challenge in any way under the new deed, that document would be destroyed in six months, and with at least as great a regard for legal forms as attended its birth. As long, however, as the Squadron is willing to consider exceptions and concessions the new deed must stand.

THE most important point of difference between the first and third deeds of gift lies in the nature and position of the much discussed mutual agreement clause. In the original deed this clause takes precedence of all other stipulations, and applies to all possible conditions of the match. In the third deed the mutual agreement clause, such as it is, occupies a subordinate position, following the stringent requirements laid down for a legal challenge; and it covers only the minor conditions of a race, as distinctly specified, and by a special provision, the time limit of ten months.

We notice that Mr. Kersey and some of the English authorities claim that the New York Y. C. has established a precedent and placed on record an interpretation of the mutual agreement clause, which must bar all attempts in the future to revive the demand for the four dimensions. We would call the attention of all who may be inclined to this view, as well as those who have accepted Gen. Paine's discovery of the marvelously elastic mutual agreement clause, to the plain and forcible wording of Clause 6: "The challenging club shall give ten months' notice in writing. Accompanying the ten months' notice there *must* be sent the following dimensions: Length on load waterline, beam at load waterline and extreme beam, and draft of water." Under this wording the four dimensions must be given or the challenge cannot be legal; and these dimensions once given, there is no power given to the holder to "waive" them or to suffer any departure from them. The time of notice may, by a special provision, be changed by agreement, but the dimensions are on a totally different footing, they must be stated in the first letter of challenge, and must stand intact throughout the whole series of matches until the last one is sailed.

Any one who may challenge, under the new deed, must face one of two disagreeable contingencies; if, like Lord Dunraven in 1892, he relies on the statements of the holder and gives but one dimension, he may, after winning the majority of races, be met with the perfectly valid objection, on the part of some member of the club holding the Cup, that his challenge was irregular and illegal, the holders having violated Clause 10 in failing to demand the specified dimensions. If, on the other hand, he should consent in his challenge to give these dimensions, he must look to it that, when his yacht is docked at New York and measured by the club measurer, she shall not differ by an inch, in draft, extreme beam, or beam at waterline, from the recorded figures; otherwise he may expect the same charges of foul play and deceit as were made against the Thistle party in 1887.

The demand for the four dimensions also stands in the way of the partial offer of the Cup committee in the present case to recognize another yacht than that originally named; the club has no more right to do this than it has to consent to sail a race in November in the face of the express prohibition of Clause 6.

The *Field* of Dec. 20, comments as follows on the proposal to make new conditions under the mutual agreement clause:

"We consider this course perfectly satisfactory; only the terms must be set forth precisely in the deed. The New York Y. C. ought to get legal opinion on the question whether their present liberal interpretation of the mutual agreement clause is allowable. As the case now stands, according to the New York Y. C., everything contained in the deed can be waived; in fact, the race can be arranged as if no deed existed. We feel sure that the mutual agreement clause never meant this. If it did two clubs could agree to race one-raters, and we could send the boat aboard a steamer across the ocean, or could even build it in the United States. The New York Y. C. should say authoritatively what they regard as allowable under this clause. Their interpretation can then be attached to the deed as suggestions short of destroying the deed, which a club with a mistaken sense of *amour propre* declines to do. We do not see any other way out of the difficulty. The position certainly is more hopeful, and we trust the Royal Yacht Squadron will accept the deed, subject to the conditions mentioned."

THE proposal has been made by the Royal Yacht Squadron to sail for the America's Cup next season under the immediate conditions agreed to by Lord Dunraven and the Cup Committee; but not to accept the Cup, in the event of the challenger winning, unless under other terms than the new deed. This proposal, which has been construed as an insult by some on this side, is really based on a fact long since pointed out by us, that there are two classes of conditions governing the America's Cup.

In the present case, in which the secondary conditions, as agreed to by the committee, are perfectly fair and liberal, the primary conditions as laid down literally in the new deed, are most unfair. The R. Y. S. now proposes to accept what is fair, and to sail a match which shall prove the superiority of one nation or the other; this done, it refuses to accept the mere symbol of this superiority because the terms attaching to its possession are both illegal and unsportsmanlike. There is no likelihood of the New York Y. C. accepting such a proposition; but it cannot rightfully condemn what is only the natural consequence of its attempt to cover an act of injustice by a thin veneer of fairness.

IN matters which do not directly concern him, the average man is not averse to having most of his thinking done and his opinions formed by his morning paper. That this is so in the matter of the America's Cup is shown by the statements made in perfect good faith by many yachtsmen in arguing over the present dispute: statements based on the distorted versions of the various deeds which have been generally published. The honor of all American yachtsmen is dependent on the conditions under which the America's Cup is offered for competition; every one of our readers is directly interested in the question whether these conditions are both fair in themselves and legally made, and we commend to them the three deeds as worthy of their careful perusal.

THE present international dispute hinges so directly on the exact provisions of the various deeds under which the America's Cup has been held for competition, that an apology is hardly necessary to our readers for taking up valuable space with so much that may be classed as ancient history. If any justification be needed for again presenting the three deeds, to the exclusion of newer and more interesting matter, we would point to the indorsement, by the chairman of the America's Cup committee, of a false statement made by the New York *Sun*, as published in our columns last week; and to the gross misrepresentations contained in the official list of concessions given out by the Cup committee to the press on the occasion of each successive challenge. From our experience within the past week, it is evident that the great majority of yachtsmen are absolutely ignorant of the distinctive points of the three deeds. In the course of an argument with a well-informed yachtsman, we failed to convince him, in the absence of the printed deed, that no provision existed in the first deed authorizing the holder of the Cup to meet a challenging vessel with the entire fleet; as was done in 1870.

The whole fabric of defense of the new deed is based on misstatements as to the various provisions of the three deeds; and to the intentional confusing of the three distinct sets of conditions involved, the primary conditions under which are defined the qualifications of a challenger, the essentials of a challenge "in due form," and the holding of the Cup by a winner—the secondary conditions, relating to the actual racing; the number of races, dates, courses, rules, allowances, judges, etc.—and the ultimate conditions defining the rights secured to a challenger in the event of a failure to agree over the secondary ones. In all three deeds these various conditions are jumbled together in most confusing disorder, notably in the last one, the consequence of over-much legal talent. In comparing the three deeds, it is necessary to a clear understanding of the case, to bear in mind the three classes of conditions.

In the official list of concessions which we quoted last week, an attempt is made to present the final conditions, in Clause 8, as in reality a part of the basis of a mutual agreement, instead of the last resort after the failure of all attempts to agree. There was nothing in the original deed of gift which could be construed as justifying the holder in substituting in the place of a mutual agreement, the ultimate terms, of one race over the club course with six months notice. There is nothing in the new deed to-day which can justify, in the list of concessions alluded to, the substitution of the ultimate terms, of three races outside, with ten months' notice and without time allowance for a common agreement such as governed the details of the match of 1893.

## 1857.

### The True Deed of Gift.

DRAWN BY THE FIVE OWNERS OF THE AMERICA AND OF THE CUP WON BY HER, AND AGREED TO BY THE NEW YORK Y. C. IN ACCEPTING THE CUP.

*To the Secretary of the New York Yacht Club:*

SIR—The undersigned members of the New York Yacht Club, and late owners of the schooner yacht America, beg leave, through you, to present to the club the cup won by the America at the regatta of the Royal Yacht Squadron, at Cowes, Aug. 22, 1851.

This cup was offered as a prize to be sailed for by yachts of all nations, without regard to difference of tonnage, going round the Isle of Wight (the usual course for the annual regatta of the Royal Yacht Squadron), and was won by the America, beating eight cutters and seven schooner yachts, which started in the race.

The cup is offered to the New York Yacht Club subject to the following conditions:

1. Any organized yacht club of any foreign country shall always be entitled, through any one or more of its members, to claim the right of sailing a match for this cup with any yacht or other vessel of not less than 30 or more than 300 tons, measured by the Custom House rule of the country to which the vessel belongs.

2. The parties desiring to sail for the Cup may make any match with the club in possession of the same that may be determined upon by mutual consent; but, in case of disagreement as to terms, the match shall be sailed over the usual course for the annual regatta of the yacht club in possession of the Cup, and subject to its rules and sailing regulations, the challenging party being bound to give six months' notice in writing, fixing the day they wish to start. This notice to embrace Custom House measurement, rig and name of the vessel.

3. It is to be distinctly understood that the Cup is to be the property of the club, and not of the members thereof, or owners of the vessel winning it in the match, and that the condition of keeping it open to be sailed for by yacht clubs of all foreign countries, upon terms above laid down, shall forever attach to it, thus making it perpetually a challenge cup for friendly competition between foreign countries.

(Signed) J. C. STEVENS, J. BECKMAN FINLEY, HAMILTON WILKES, GEORGE L. SCHUYLER, EDWIN A. STEVENS.

## 1882.

### The Second Deed of Gift.

DRAWN BY THE SOLE SURVIVOR OF THE FIVE DONORS, IN CONJUNCTION WITH A COMMITTEE OF THE NEW YORK Y. C., AND ACCEPTED BY THE CLUB AT THE ANNUAL MEETING, FEB. 2, 1882.

The America's Cup is again offered to the New York Y. C., subject to the following conditions:

1. Any organized yacht club of a foreign country, incorporated, patented or licensed by the Legislature, admiralty or other executive department, having for its annual regatta an ocean water course on the sea or an arm of the sea (or one which combines both), practicable for vessels of 300 tons, shall always be entitled, through one or more of its members, to the right of sailing a match for this Cup, with a yacht or other vessel propelled by sails only, and constructed in the country to which the challenging club belongs, against any one yacht or vessel as aforesaid, constructed in the country of the club holding the Cup.

2. The yacht or vessel to be of not less than 30 nor more than 300 tons, measured by the Custom House rule in use by the country of the challenging party.

3. The challenging party shall give six months' notice in writing, naming the day for the proposed race, which day shall not be *later than seven months from the date of the notice.

4. The parties intending to sail for the Cup, may, by mutual consent, make any arrangement satisfactory to both as to the date, course, time allowance, and any and all other conditions of the match, in which case also the six months' notice may be waived.

5. In case the parties cannot mutually agree upon the terms of a match, then the challenging party shall have the right to contest for the Cup in one trial, sailed over the usual course of the annual regatta of the club holding the Cup, subject to its rules and sailing regulations, the challenging party not being required to name its representative until the time agreed upon for the start.

6. Accompanying the six months' notice, there must be a Custom House certificate of the measurement, and a statement of the dimensions, rig and name of the vessel.

7. No vessel which has been defeated in a match for this Cup can be again selected by any club for its representative until after a contest for it by some other vessel has intervened, or until after the expiration of two years from the time such contest has taken place.

8. Vessels intending to compete for this Cup must proceed under sail on their own bottoms to the port where the contest is to take place.

9. Should the club holding the Cup be for any cause dissolved, the Cup shall be handed over to any club of the same nationality it may select which may come under the foregoing rules.

10. It is to be distinctly understood that the Cup is to be the property of the club and not of the owners of the vessel winning it in a match, and that the conditions of keeping it open to be sailed for by organized yacht clubs of all foreign countries, upon the terms above laid down, shall forever attach to it, thus making it perpetually a challenge cup for friendly competition between foreign countries.

GEO. L. SCHUYLER.

*A curious error crept into clause 3 in some unexplained way, and for some years the word "less" appeared in many copies of the deed in place of "later."

## 1887.

### The "New" Deed of Gift.

DRAWN BY A COMMITTEE OF THE NEW YORK Y. C., IN THE NAME OF THE "SURVIVING DONOR," AND ADOPTED IN THE NAME OF THE CLUB BY THE SAME COMMITTEE.

1. This deed of gift, made the twenty-fourth day of October, one thousand eight hundred and eighty-seven, between George L. Schuyler, as sole surviving owner of the Cup won by the yacht America, at Cowes, England, on the twenty-second day of August, one thousand eight hundred and fifty-one, of the first part, and the New York Yacht Club, of the second part, witnesseth:

2. That the said party of the first part, for and in consideration of the premises and of the performance of the conditions and agreements hereinafter set forth by the party of the second part, has granted, bargained, sold, assigned, tranferred and set over, and, by these presents does grant, bargain, sell, assign, transfer and set over unto the said party of the second part, its successors and assigns, the Cup won by the schooner yacht America at Cowes, England, upon the twenty-second day of August, 1851, to have and to hold the same to the said party of the second part, his successors and assigns, in trust nevertheless for the following uses and purposes:

3. This Cup is donated upon the condition that it shall be preserved as a perpetual challenge cup for friendly competition between foreign

countries. Any organized yacht club of a foreign country, incorporated, patented, or licensed by the Legislature, Admiralty or other executive department, having for its annual regatta an ocean water course on the sea, or on an arm of the sea, or one which combines both, shall always be entitled to the right of sailing a match for this Cup, with a yacht or vessel propelled by sails only, and constructed in the country to which the challenging club belongs, against any one yacht or vessel constructed in the country of the club holding the Cup.

4. The competing yachts or vessels, if of one mast, shall be not less than sixty-five feet nor more than ninety feet on the load waterline. If of more than one mast they shall be not less than eighty feet nor more than one hundred and fifteen feet on the load waterline.

5. The challenging club shall give ten months' notice, in writing, naming the days for the proposed races, but no race shall be sailed in the days intervening between Nov. 1 and May 1. Accompanying the ten months' notice of challenge there must be sent the name of the owner and a certificate of the name, rig and following dimensions of the challenging vessel—namely, length on load waterline, beam at load waterline and extreme beam and draught of water, which dimensions shall not be exceeded, and a Custom House registry of the vessel must also be sent as soon as possible. Vessels selected to compete for this Cup must proceed under sail on their own bottoms to the port where the contest is to take place. Centerboard or sliding keel vessels shall always be allowed to compete in any race for this Cup, and no restriction nor limitation whatever shall be placed upon the use of such centerboard or sliding keel, nor shall the centerboard or sliding keel be considered a part of the vessel for any purposes of measurement.

6. The club challenging for the Cup and the club holding the same may, by mutual consent, make any arrangement satisfactory to both as to the dates, courses, number of trials, rules and sailing regulations and any and all other conditions of the match, in which case also the ten months' notice might be waived.

7. In case the parties cannot mutually agree upon the terms of a match, then three races shall be sailed and the winner of two of such races shall be entitled to the cup. All such races shall be on ocean courses, free from headlands, as follows: The first race, twenty nautical miles to windward and return; the second race an equilateral triangular race of thirty-nine nautical miles, the first side of which shall be a beat to windward; the third race (if necessary), twenty nautical miles to windward and return; and one week day shall intervene between the conclusion of one race and the starting of the next race. Those ocean courses shall be practicable in all parts for vessels of 22ft. draught of water and shall be selected by the club holding the up; and those races shall be sailed subject to its rules and sailing regulations so far as the same do not conflict with the provisions of the deed of gift, but without any time allowance whatever.

8. The challenged club shall not be required to name its representative vessel until at the time agreed upon for the start, but the vessel when named must compete in all the races, and each of such races must be completed within seven hours. Should the club holding the cup be for any cause dissolved the cup shall be transferred to some club of the same nationality, eligible to challenge under this deed of gift, in trust and subject to its provisions. In the event of the failure of such transfer within three months after such dissolution said cup shall revert to the preceding club holding the same and under the terms of this deed of gift. It is distinctly understood that the cup is to be the property of the club subject to the provisions of this deed, and not the property of the owner or owners of any vessel winning in a match.

9. No vessel which has been defeated in a match for the cup can be again selected by any club as its representative until after a contest for it by some other vessel has intervened, or until after the expiration of two years from the time of such defeat. And when a challenge from a club fulfilling all the conditions required by this instrument has been received no other challenge can be considered until the pending event has been decided.

10. And the said party of the second part hereby accepts the said cup subject to the said trust, terms and conditions, and hereby covenants and agrees to and with said party of the first part that it will faithfully and fully see that the foregoing conditions are fully observed and complied with by any contestant for the said cup during the holding thereof by it, and that it will assign, transfer and deliver the said cup to the foreign yacht club whose representative yacht shall have won the same in accordance with the foregoing terms and conditions, provided the said foreign club shall by instrument in writing lawfully executed enter with said party of the second part into the like covenants as are herein entered into by it, such instrument to contain a like provision for the successive assignees to enter into the same covenants with their respective assignors, and to be executed in duplicate, one to be retained by each club, and a copy thereof to be forwarded to the said party of the second part.

11. In witness whereof the said party of the first part has hereunto set his hand and seal, and the said party of the second part has caused its corporate seal to be affixed to these presents, and the same to be signed by its commodore and attested by its secretary the day and year first above written.

GEORGE L. SCHUYLER.

In the presence of H. D. HAMILTON. [Seal of N. Y. Y. C.]

THE NEW YORK YACHT CLUB, by ELBRIDGE T. GERRY, Commodore. JOHN T. BIRD, Secretary.

## The Mutual Agreement Clause.

THE *Field* of Dec. 15 discusses the new interpretation of the mutual agreement clause as follows, its views being identical with our own:

The New York Y. C. appear to be convinced that by straining the powers conferred under the "mutual agreement clause," and conceding "fair terms" to the challenger for the America Cup races, they get over all the objections to the "new deed of gift." It is, however, now patent that they have put a wrong estimate on the situation. We have already said that it would be safe to accept the "new deed" with the broad and liberal interpretation of the New York Y.C. as to what is allowable under the mutual agreement clause attached to it, and we believe Lord Dunraven is of the same opinion but he cannot be answerable for the Royal Yacht Squadron. In 1889 the Royal Yacht Squadron decided they would not indorse a challenge under the "new deed" because it imposes the unfair conditions on the challenger of revealing the leading dimensions and elements of his vessel ten months before the matches are to be sailed, thus giving the holder of the Cup the opportunity of "outbuilding" the challenging yacht. The New York Y. C. says that under the "mutual agreement clause" this revelation need not be made; in fact, the club accepted Valkyrie's challenge last year on length of waterline alone. But this was clearly outside the deed, which demands as a preliminary that ten months before the date of the matches the "length on load waterline, beam at load waterline, and extreme beam and draught of water, which dimensions shall not be exceeded, and a Custom House registry of the vessel must also be sent as soon as possible." The only thing the "mutual agreement clause" excepts in this preposterous demand is the ten months' notice, although the Americans are so thoroughly ashamed of the "dimensions clause" that they now interpret the mutual agreement clause to mean the challenger and holder of the Cup can make whatever terms they like outside the deed itself.

## Some More Plain Facts.

*Editor Forest and Stream:*

In my opinion the plainest and baldest statements ought now to be made as regards the negotiations for the proposed races for the America's Cup. I beg to indorse your statements of "plain facts" and to add a few others to show that John Bull before accepting the invitation of the N. Y. Y. C. to challenge, which resulted in the Valkyrie-Vigilant contests, assured himself of one fact, to wit, that if he accepted the invitation and followed the prescribed course he complied letter for letter with the terms of the first deed of gift.

1. His club was of approved standing.
2. He, though his club gave six months' notice, "named his vessel, giving her waterline length and following that with her custom house measurement."
3. He entered into a mutual agreement.
4. He did no more.
5. He did not agree to sign a receipt according to the deed of 1887.
6. He did not intend to sign one.
7. If he had won the series he would have claimed possession of the Cup on the grounds of the illegality of the second and third deeds and he might have pressed his claims if necessary in the United States courts.
8. He now wants to repeat his former method of procedure and says he will cross the bridge when he comes to it, but will not agree to meet a contingency after a set form.
9. He is consistent, the N. Y. Y. C. is not.

Considering that the Cup committee has a due appreciation of these facts, is not one entitled to reasonably conclude that this committee is shirking its responsibility and concealing the true point at issue? I have always believed that right-minded people interested in a righteous cause would defend such a cause at any time and in any place.

Gentlemen of the New York Y. C., meet the issue like men; accept the challenge; defeat John Bull on the water, and if you fail in this, give him the chance to prove your wrong and to place that cup where it belongs under the conditions of the original deed of gift or offer to arbitrate with John Bull and prove the legality of the instrument if you dare. SPERA.

## A New "Song of the Cup."

"SONGS of the Cup" are no novelty to yachtsmen, even lesser poets than Commodore "Nick" Kane have sought to do full justice to such an inspiring theme; but all of them, including the renowned Commodore, give way to the sweet singer who lays claim to the authorship of the following touching verses. They come to us from a friend, who writes: "Knowing you to possess a pretty taste in sea songs, I take this opportunity to add another to your collection. The writer, an aged widow, hawks it from door to door, like an ancient troubadour; and it is needless to add that in me she found an easy victim. All my latent patriotism flamed forth at the sight of her stirring stanzas, and that yachtsmen must indeed be inoculated with the fell virus of Anglomania who would seek to controvert the statement so manifestly veracious as that wherein she claims that 'the Vigilant did not waltz or prance.' I send you this in the hope that it will make you a better man; and I venture to predict that an occasional perusal of it would greatly modify many of the views which you now erroneously hold."

*Commemorative of the International Yacht Race between Vigilant and Valkyrie.*

BY MRS. R. W. ODLUM.

Over the water with swan-like grace
The Vigilant swept and won the race,
And the sparkling ocean spray
Cheered and lighted her homeward way.

Valkyrie, how could you hope to win,
Knowing Columbia the helm would spin,
Did you deem her eagle wing
No longer victory could bring?

Even when she in her cradle lay
Did she not wield her potent sway,
And with her young untutored hand
Waive British rule from off the land?

Propitious winds made the Valkyrie waltz,
But like the world, winds are false,
Creating high waves of hope that fall and rise
Just as they seem to reach the skies.

The Vigilant did not waltz or prance,
Yet she was the belle of the ocean dance,
And a favored pet of the stormy gale,
For life seemed to thrill her every sail.

Proud and majestic in her speed
Fairly she won the race indeed,
In good faith invites Valkyrie to sup
A farewell draught from the Silver Cup.

Even the official indorsement of the chairman of the America's Cup committee could add nothing to the truth, the force and the beauty of this gem of patriotic poesy.

## Girth as a Factor of Measurement.

*Editor Forest and Stream:*

The Cup challenge and the Cup races never fix the interest of the public in England as they do in America. At the present moment English yachtsmen are all agog about the rating rule, some wanting this, some that, and very few agreeing on what is wanted. A small but a very noisy section is now screaming for girth to be introduced as a tax into the rating formula, but the results of taxing G in France are not encouraging, and I think many English yachtsmen object to draft being taxed, either directly or indirectly.

In large yachts draft is limited by practical considerations connected with rocks and sand banks—and in the small classes draft gives latent grip and seaworthiness. Moreover, draft being a combination of immersed hull depth and of keel below hull, it seems wrong to tax the whole, a part being hull depth, which experts are wishing to encourage by means of a premium.

The resulting development of a girth rule will in all probability be a long, herring-gutted beast of a boat, of a more objectionable type than the rafts-cum-bulb-keels, a few of which now exist in these waters.

Our 20-raters had a girth in 1892 (measured à la Français) which approached 38ft., and this girth has been increased in more recent boats in this class. Nevertheless, if the Rule —, say

$$R = (L+G+\sqrt{S})\times \text{constant (I)},$$

were to be adopted or even the French Rule —,

$$R=(4L-G)\ G\sqrt{S}\times \text{constant (II)},$$

the present fleet would have no chance against new boats built specially with a view to keep down the length of G—perhaps to 33 or 32ft. in the 20-rating class. Thus:

| No. | L. | G. | S. by I. | S. by II. (French). | S. by Y.R.A. | S. by Seawanhaka. |
|---|---|---|---|---|---|---|
| 1 | 42 | 32 | 2714 | 3240 | 2858 | 3025 |
| 2 | 44 | 32 | 2510 | 2900 | 2728 | 2809 |
| 3 | 46 | 32 | 2314 | 2600 | 2600 | 2601 |
| 4 | 48 | 32 | 2125 | 2304 | 2500 | 2401 |
| 5 | 42 | 36 | 2314 | 2730 | 2858 | 3025 |
| 6 | 44 | 36 | 2125 | 2420 | 2728 | 2809 |
| 7 | 46 | 36 | 1945 | 2170 | 2600 | 2601 |
| 8 | 48 | 36 | 1772 | 1951 | 2500 | 2401 |

Our 20-raters at present time are about 46ft. l.w.l. and carry about 2,600sq. ft. of sail; girth, as before stated, being 38 and over. This fleet would be wrecked by any rule which taxed G. L. and S. And so with the other classes. THALASSA.

## The R. Y. S. and the Cup Committee.

ON the receipt in London of the cable sent by the Cup committee on Dec. 17, published in our last issue, Lord Dunraven was interviewed, and two statements from him were cabled to New York. According to them, he was much dissatisfied with the proposal to race in November, and proposed to challenge for some other prize, the races to be sailed off New York in September. On Dec. 19 the following cable was received from Secretary Grant:

LONDON, Eng., Dec. 19.—*Smith, Yacht Club, New York:* Cable 17th received. Middle of November considered much too late, but Dunraven will race September or within three weeks of arrival. If this is accepted question of receipt will be referred to special meeting earliest opportunity.

If rejected special meeting is unnecessary. Guarantee that Squadron would not demand Cup failing question of receipt intended; identical Dunraven's proposal 24th June, '89. Please cable acceptance or refusal. (Signed) GRANT, Cowes.

A meeting of the committee was held on Dec. 20, at which the following cable was framed, being cabled immediately:

*Grant, Secretary, Cowes, Isle of Wight:*

Will fix first race eight months from receipt of advice from Royal Yacht Squadron that terms of our cable 17th are officially agreed to, and Dunraven's request for three weeks to fit out after arrival is granted. (Signed) SMITH, Chairman.

The following reply was received:

COWES, Dec. 22.—Smith, Yacht Club, New York: Thanks for your cable. Special meeting fixed for Jan. 7. GRANT.

# MODEL YACHTING.

## American Model Yacht Club.

THE American Model Yacht Club, in pursuance of a vote taken at the regular December meeting, has inaugurated a series of club talks on the designing and construction of yachts with especial reference to sailing models. The first lecture was delivered at the Liberty, 227 Fulton street, Brooklyn, on Friday evening, Dec. 14, by Mr. Frank Nichols, the measurer of the club. The attendance was large and much enthusiasm was manifested.

The subject matter of the lecture included the preliminary work incident to laying down the model on paper, and was very fully treated by the lecturer, who has the faculty of making the subject plainly understood by his hearers. These talks will be continued at intervals throughout the winter, the next lecture being given at the same place on Friday, Dec. 21.

The course when completed will include the designing and construction of both yachts and models, together with the various calculations necessary to a scientific investigation and understanding of the principles involved. The services of a number of gentlemen well versed in the subject have been secured to further Mr. Nichols's lectures, and they will appear later in the course.

## Model Yacht Glue and Rudders.

BROOKLYN, Dec. 20.—*Editor Forest and Stream:* In this week's issue of your paper I notice an inquiry from a model yachtsman about the glue in constructing a model yacht on the bread and butter plan. I use the best French glue and have never had a boat open her seams or come apart when other directions in my article on building have been followed strictly, which evidently the writer had not done or his boats would have been all right. The first and principal consideration is to have every piece or section in the hull cut from the same plank so as to have them of the same growth of wood, as no two planks or boards taken from different trees will shrink alike; and if they don't there is a drawing or sliding pull on the joints which will eventually break the best glued joint that can be made. The sections should also be warmed until they are as hot as can be handled before putting on the glue, and then when clamped together, the glue is forced right into the grain of the wood to some extent, thus insuring a perfect joint.

The second point is to paint the inside of the hull well before putting on the deck, as some water will get inside of a boat, and it does more damage there than that which is outside; I generally give mine three coats of white lead paint darkened to about a gray color with lampblack. When thoroughly dry this is impervious to water.

I have two boats, one five and the other six years old, made in this manner and it is impossible to tell where the joints are.

His lead rudders that he describes could not be used in sailing races under the rules of the American Model Y. C., as the change from the light to a heavier one would necessarily change the length on l.w.l. and it could not be said "where he was at." We use a wooden rudder hung the same as on large yachts, with the exception that the tiller projects aft instead of forward and is operated by an extra sheet attached to the boom of the mainsail, so the l.w.l. always remains the same, and her ballast and trim are always the same. In sailing close hauled the rudder is not used at all. HERBERT FISHER.

# Canoeing.

## A New Improvement in Tents.

THE improvement here described is the invention of Mr. J. J. Rinn, of New York, and has been recently patented:

The improvement consists of an easy and quick method of opening and closing the entrance flaps of a tent; by this method they may be opened or closed as quickly as a house door, and when closed are as tight, and may be as readily bolted on the inside or locked on the outside. The methods employed are very simple, yet so entirely different from those now in use, that it may be said to be a complete revolution in the manner of opening, closing and fastening; and in connection therewith is an improved method of ventilation.

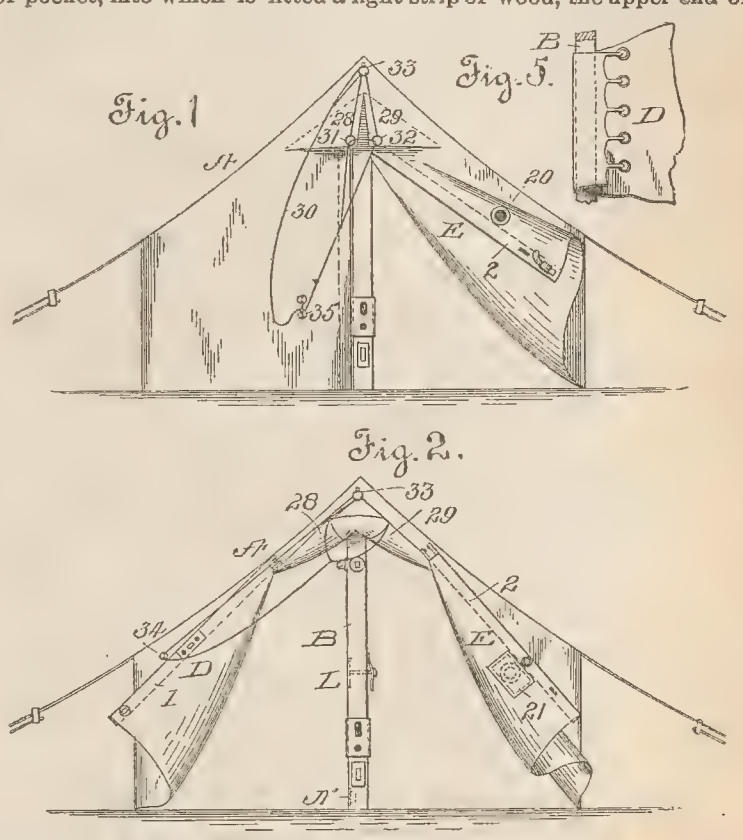

Fig. 1 is an end elevation of the tent showing the right hand, or flap E, open and the ventilating flaps over the entrance closed.

Fig. 2 is the same elevation, showing the strips in the flaps disconnected from the universal points and thrown open to their fullest extent, and the ventilating flaps over the door raised.

Fig. 5 shows the method of fastening the inner flap D to the tent pole when no strip is used in that side.

The arrangement is as follows: The inner, or left hand, flap is fastened to the vertical tent pole by wrapping around and fastening with hooks and rings, as shown in Fig. 5, or to the side of the pole when a rigid strip is used.

The outer or right hand flap, which is commonly used as an entrance flap, has the vertical edge turned in and sewed, forming a wide hem or pocket, into which is fitted a light strip of wood, the upper end of

which is connected to the tent pole by a universal joint, from which it may readily be detached; and the canvas of the tent is slitted horizontally at this point, so that when the joint is disconnected the flap may be folded back, thus making a wide opening at the top instead of an acute angle, as usual. The flap on the other side is arranged to fold back in the same manner.

Near the lower end of the rigid strip, about the height of a door knob or a little less, is a latching bolt firmly secured to the strip, and to the tent pole at the same height is fastened an automatic latching or locking device, adapted to engage the bolt on the strip and hold the strip and pole securely together when the tent is closed. To release the latching device a small push button in the side of the pole is pressed inwardly, when the bolt is released and automatically withdrawn by a spring. When the tent is closed, a person on the inside can press a button on the back of the pole, which renders the latching device inoperative from the outside, so that none can enter.

There is also an arrangement of a mosquito or fly screen whereby those pests can be kept out as well as can be done in a house.

Over the entrance are two triangular flaps which extend below the slits in the main flaps and cover them to exclude wind and rain. When the front is closed those flaps may be raised, making an opening of considerable size over the door that may be used as a ventilator. One pull on a cord opens or closes both of these flaps as may be desired and can be operated from the inside or outside as one may wish. In Figs. it is shown on the outside.

When the tent is to be rolled up for transportation the rigid strips are readily withdrawn from the pockets and latched to the tent pole as when the tent is closed, being thus securely fastened.

Several civil engineers, army officers and officers of the national guard have examined this improvement and all speak very favorably of it.

The inventor has had several years' experience in the use of tents while surveying and railroad building in the West and is very familiar with what is required of them under the most trying conditions.

## Canoe Racing.

*Editor Forest and Stream:*

In order to restore canoe racing to a satisfactory condition it is necessary first of all for all concerned to see and to admit that it must not be a building competition. Canoe racing must be looked upon as being ideally a game of sport in which the competitors use all the same identical apparatus without any power of altering the same. They compete only in their skill in using the apparatus. This is what is done in all other games and sports.

What would become of any game such as cricket if each player were allowed to use as wide a bat as he please, and if the opposing sides were allowed to follow their own ideas as to the size of the ball, stumps, etc.? The game would cease to exist. And canoe racing as a pastime cannot exist under similar conditions.

The most ideal canoe racing would be that in which all the boats were absolutely identical in build. It would then become what it should be, a pure trial of skill in handling the boat, and also in designing the rig, which is a legitimate part of the sailorman's craft, though building the hull is not.

I would also abolish those unshipshape devices which have arisen from the late sailing machine competitions, viz., the sliding seat and the very limited well.

A canoe is primarily intended for cruising, hunting, etc., and no canoe should be recognized unless it is really an open one, suited for practical purposes, with decks at the ends or sides only so far as is usual for ordinary purposes.

Since tastes differ, of course the ideal condition of one fixed model for all cannot be expected, but it is always good to see the ideal and then try how near one can come to it.

How do canoeists in general accept the definitions I have tried to lay down as some basis for action?

1. Is it conceded that canoe racing must no longer be a building competition, but a fair trial of skill?

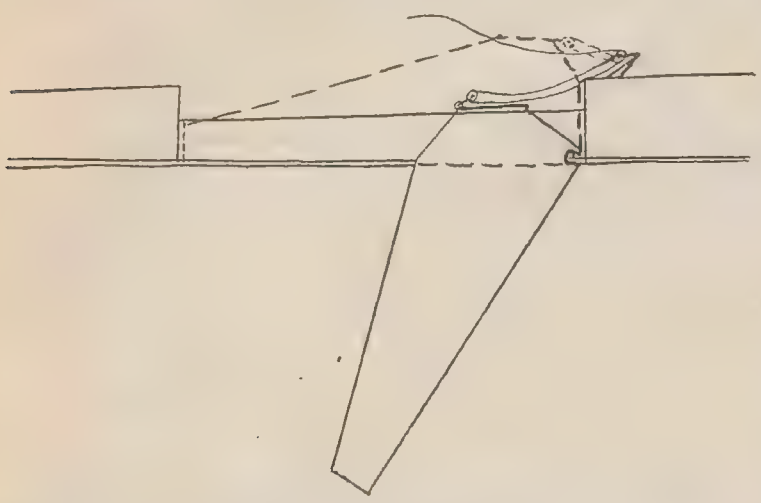
2. Is it conceded that for this purpose all canoes in a race should be pretty nearly identical in model?

3. Is it further conceded that such devices as the sliding seat are "unshipshape," unsailorlike?

4. And that every canoe should be a practical open craft suited for cruising, etc.?

If these points are admitted, or if even only 1 and 2 are admitted, then let the members of any club who admit them, consider wha limitations of model they think suitable in order to attain the desire l end.

If points 1 and 2 are admitted then sail area I think need not be limited, because in an open canoe and without the sliding seat overcanvassing will not pay.



The great thing is to kill the racing machine. The sliding seat and small cockpit are its great stand-byes. Without them it can hardly exist.

BASSILLE.

### The Revival of Canoe Racing.

*Editor Forest and Stream:*

I do not think cold water should be thrown on any scheme that is likely to bring back the palmy days when thirty to forty canoes nsed to start in the unlimited race at the A. C. A. meets, and I as thoroughly believe in using heroic measures to resuscitate canoeing as I should a half drowned canoeist, but when it is proposed to bleed the patient so as to make room for new blood I think there is no question but coma would supervene before sufficient blood could be infused. This, I believe would be the result of trying handicap races when the

number of entries is so small. The effect would be to drive out the few old racing men left while the new blood would be represented by only a few novices.

A remedy is difficult to suggest, but if we recognize the fact that there is as good material in the Association now as there ever was, and that we could have our old time races again if we could only tempt them to come afloat, I think we could succeed. To do this we shall have to make the canoe as comfortable as it was when we used to drift around with our 60ft. rigs. Just here let me call your attention to the fact that we have not offset the increased sail area either by increased beam or draught. I do not think we should touch the former if possible but by increasing the draft of the centerboard to 6ft. we could, I believe, have a boat that, although topheavy with rigging, would heel so slowly as to allow a man plenty of time to shift his position to avoid an upset. A light housing centerboard may be used if rigged with a tackle as is suggested in accompanying sketch.

LIEDA.

## Rifle Range and Gallery.

### Cincinnati Rifles.

CINCINNATI, O., Dec. 16.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended. Conditions: 200yds., off-hand, at the standard target. A strong, gusty wind made it almost impossible to make a good record to-day:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Gindele | 9 | 9 | 9 | 7 | 8 | 9 | 7 | 9 | 10 | 9—86 |

### Development of the .25Cal.

No cartridge has worked into the good graces of the small bore cranks as has the .25cal. It has been popular from the very first and its popularity is on the increase, as is evidenced by the many modifications that have been made. The original cartridge is the .25-20-86, or the same as is now made by the factories. The 86gr. bullet was thought to be too heavy on account of key-holing, so the Ideal M'f'g. Co. worked out a series of bullets varying in weights from 46 to 96grs., the 77gr. becoming very popular immediately. The cranks however desired to use the heavier bullets, and this led to barrels being cut with a quicker twist, running down from one turn in 18in. to one turn in 8in., as made by Mr. Pope, of Hartford, Conn. and Mr. Lowe, of Fitchburg, Mass. Such a twist, of course, required greater velocity and more powder, so these gentlemen have reduced the well known 32-40 Marlin shells at the muzzle so as to be correct for the .25cal. bullets. Notable work is being done with these arms, as may be noticed from time to time by the published scores.

The Ideal Co. is kept busy administering to the wants of shooters with new ideas. E. A. Leopold, of Norristown, Pa., sketched what he desired for a bullet (cut of it is here shown), and sent it in to Mr. Barlow, who worked it up into the well known cylindrical mould, which enables the user to get any weight he desires. The wonderful work with this bullet is well known.

The Ideal Company are now ready to meet the demands for heavier .25cal. grooved bullets, as per cut shown herewith. Single moulds may be had to cast any of the specified weights. The company are also prepared to furnish the "Perfection adjustable," that will cast the whole series of weights. The extreme point is exactly the same shape as the .25-20cal., but it is longer to the crimp shoulder, so that the .32 40 Marlin shell reduced to .25cal., with this ball inserted, will be exactly same length as the standard .32-40 Marlin cartridge, making ammunition that is properly proportioned for repeating rifles. The Marlin Fire Arms Co. will produce a rifle for this cartridge.

The cut of the regular .25 20 bullets will show the difference in the length of the point and the weights as compared with the .25-35. Of course for light weight or short range bullets, the series of .25-20 will be better balanced; but where the longer ball is desired, the .25-35 series will be best.

### Pacific Coast Experts.

SAN FRANCISCO, Cal., Dec. 10.—*Editor Forest and Stream:* I send herewith a few Golden Gate rifle notes. The diamond medal of the California Schützen Club which has heretofore gone annually to the member making the best 20 shot score in his monthly medal string will be awarded this year to the member making the best center shot during the year. The final measurements have not yet been made. Two or three dead centers are said to have been made. This system would seem to induce much rather than accurate shooting.

Several champion shots withdrew from the California Club last year, so competion is not quite so keen as formerly for honors. This club still, however, retains many of our best riflemen in its ranks.

In response to your suggestion that it would be interesting to have a team of El Dorado riflemen compete with the N. Y. champions I think if it were not for the expense and loss of time such a contest could be arranged. It unfortunately happens that a very large majority of our "cranks" are men of limited means and, in business, are not their own master. Our clubs, moreover, are not wealthy. We have a couple of millionaires in our ranks, but they hug a quarter a little longer than the rest of us.

I think we of San Francisco could put forward a team of twenty or thirty men who would make at least a good second to any team in the country. However, no one club in our city embraces all our local champion marksmen, as I am informed the Zettler Club practically does in your vicinity. The latter, moreover, has a population to draw from ten times as great as San Francisco. The challenge of the Columbia Pistol and Rifle Club of this city, published in your journal some months ago, remains unanswered. This club prefers a team match for three styles of shooting combined, viz., pistol, Springfield rifle and target rifle; or second, any two combined; or thirdly, any single style except target rifle. As to the latter the New Yorkers seem from all accounts to be rather too strong to be challenged lightly. Some of the Columbia's members, however, are willing to tackle anything or any body. It would be folly for them to enter a numercially small team against the Zettlers, and if would be impossible to send a team East from this organization.

Several of our local riflemen have decided to visit the big shooting festival in your city next year, among them a few good shots.

Columbia Club's scores yesterday:

Rifle.—Members' medals, no re-entry: Champion class, D. W. McLaughlin 83, Dr. Rodgers 81, Col. Kellogg (with Springfield rifle) 75. First class, A. H. Pape 82, A. Gehret 73. F. Baumgartner 72.

Pistol.—Ditto: Champion class, E. Hovey 91, F. O. Young 85. First class, A. H. Pape 91, Dr. Rodgers 88, D. W. McLaughlin 86, J. Baumgartner 83. Second class, A. Gehret 81, E. Fetz 77, L. Zimmerman 77, H. Folster 73.

In the contest for the all-comers' target rifle medal D. W. McLaughlin again led the van, making the fine score of 93 (standard target), F. O. Young 90, A. H Pape 82.

The S. F. Schuetzen Verein held its monthly medal shoot yesterday at Shell Mound. Good scores were: L. Beadel 431 in the champion class, and F. P. Schuster 416, third class.

The Germania Club rather carried off the honors of the day on the range.

The medal scores in all the local schuetzen clubs are 20 shots on the 25-ring target, no re-entry, every shot to count.

During the forenoon F. P. Schuster, a third class man, led off with 438 rings. Mr. S. is a new man, and this score shows that he has good holding ability. In the afternoon the storm somewhat lulled, giving a good light, Dr. L. O. Rodgers, champion class, began his score with a 25 and shot through in good form, making by fives 110, 114, 111, 110, or a total of 445. This is the highest score ever recorded in the club, Geo. Helm's 443 being thus relegated to second place.

Messrs. Young, Helm, Glindeman, Faktor and Bendel will try next year to climb over this figure. Good luck to the man who does it. After finishing the medico "smiled" and those present echoed "that same."

ROEEL.

### Chavant—Rosenbaum.

NEW YORK, Dec. 22.—*Editor Forest and Stream:* In your issue of to-day there is an article under the heading of "Chavan vs. Rosenbaum," but your correspondent failed to give particulars, which in rifle matches is very important now and then.

The understanding was, that I was to shoot Mr. Dorrler's 38.55 against Mr. Chavant, for a small purse, 50 shots per man, off-hand, at the Greenville ranges (Armbrusters Schuetzen Park).

When I arrived at the park, I only found Mr. G. Plaisted, practising, who blandly asked me what brought me over. I then informed him of the match and he cooly informed me that he did not remember anything about it and that Mr. Dorrler was not expected to put in appearance. Finally Mr. Dorrler did come, and he was astonished when I informed him of the match. He said he only had 35 bullets, which he intended to shoot himself. Thereupon finding it impossible to shoot the match, I suggested to Mr. Chavant to shoot him a 25-shot race for refreshments. Mr. Chavant offered me his rifle and as I favor holding at 6 o'clock and Mr. Chavant full, the sights had to be changed at each shot, which of course made it next to impossible to made any kind of a showing.

I was severely handicapped, as the sights could not be adjusted exactly the same as they were.

Your correspondent also advises me to look for an easier mark than Mr. Chavant.

At the present time I am not in a position to cross a rifle in which I could place confidence enough to use in a match at 200yds.

I only claim to be fixed for gallery shooting.

In the near future I hope to be equipped with a 32-40 rifle, and the first man who will hear from me is Mr. Chavant. WM. ROSENBAUM.

### A Word About Champion Petty.

ELLICOTT CITY, Md.—*Editor Forest and Stream:* I see by the current issue that the Winans trophy has become the property of Mr. Petty. For once the best man has received his just deserts, and I, for one, would like to offer him my sincerest congratulations. It has been my good fortune to shoot with many good men, and some day I hope to write the experiences; but with due regard for the modesty of the gentleman in question, it has never fallen to my lot to meet a fairer competitor, a more generous adversary, or one who could win a match so gracefully that the sting of defeat was completely removed, so completely indeed that the beaten man felt rather glad than otherwise.

If for no other reason than that I had the pleasure of meeting and knowing Mr. Petty, the seeming foolishnes of matching myself against his skill has an excellent excuse. I have never regretted it for that reason alone, and I am only sorry that more men who love revolver shooting could not have met him in front of the target, and found, as I did, not only an expert shot, but a genuine man, full to the brim with life and vitality, modest and unassuming, one good to know. All success to him. May his blessings be many, his cares few. May he have a long life, and may his eye and finger never fail him.

SAMUEL J. FORT, M.D.

### Col. Lakin's Score.

WESTFIELD, Mass., Dec. 20.—Col. J. A. Lakin, of this place, made the following score in response to the petition recently to him to shoot for a special gold medal to make 23 or better out of a possible 25 at 50yds., with a Colt's .38cal. revolver. The trial came off at Springfield, Friday, Dec. 14, 1894, with the following result, possible 100:

45545—23 54555—24 45555—24 54554—23—94

The contest was witnessed by a number of the personal friends and interested shots of this vicinity, and the Colonel received the congratulations of his friends upon the fine score presented. I give his range score, Nov. 17, revolver, 50yds., possible 60:

5 4 4 5 4 3 4 7 5 4 3 5—51

Springfield rifle, possible 50:

5544454445—44 5554555455—48 5554555455—48

WORONOCO.

## Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

### FIXTURES.

1895.

Jan. 1.—RYE, N. Y.—All-day shoot of Rye Gun Club, commencing at 10 A. M.; live birds and targets. E. J. Pope, Sec'y.

Jan. 1.—NEWARK, N. J.—Fifteenth annual New Year's Day tournament of the South Side Gun Club. W. R. Hobart, Sec'y.

Jan. 1.—TOWANDA, Pa.—New Year's tournament of the Towanda Rod and Gun Club; live birds and targets. W. F. Dittrich, Sec'y.

Jan. 9.—YARDVILLE, N. J.—All-day shoot at live birds; handicap, 25 birds, $10 entrance, birds extra.

Jan. 10-11.—FANWOOD, N. J.—Two days' tournament of the Climax Gun Club; first day, targets; second day, live birds.

Jan. 15-17.—HAMILTON, Canada.—Hamilton Gun Club's annual tournament; $1,000 added money. J. W. Bowman, Sec'y.

Jan. 24.—NEWARK, N. J.—Newark City handicap, 25 live birds, $10 entrance, birds extra, under the auspices of the Newark Gun Club. Shoot to take place at Erb's grounds.

Feb. 22—ALBANY, N. Y.—First tournament of the Eastern New York Trap-Shooters' League, of the series of 1895, under the auspices of the West End Gun Club. Henry A. Kratz, Sec'y.

April 3-5—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York; $1,000 guaranteed, all surplus added.

May 8-10.—WEIR CITY, Kas.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $200 in cash added. W. W. McIlhany, Sec'y.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30—CANOJOHARIE, N. Y.—Two-day's tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec'y.

June 4-7.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia, John C. Shallcross, Sec'y, Frankford, Pa.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

The most interesting event in live bird circles during the past week was the attempt of Jack Brewer to kill 46 out 50 pigeons, Frank Class supplying the birds and betting $100 that Brewer couldn't accomplish the feat. Either Brewer was clean off his form or else he cannot shoot pigeons like he used to in days gone by; as a matter of fact he did not look well and was altogether unlike himself. The birds furnished by Class were surprise parties, considering the conditions of the weather; it was indeed a great surprise when Brewer was shot out on the 26th round. It is more than probable that Morfey would try for $100 of Class's movey if the latter would bet against 43 kills.

Brewer has offered Morfey a chance to make a match at 100 live birds on the following conditions: Brewer on the 30yds. mark, Morfey at 28. The offer has not been accepted.

Jim Elliott is still in the city. He is attending strictly to business and not saying much. The chances of a match between the two cracks before Elliott goes West don't look very rosy. Still, there's plenty of time yet, as Jim will probably be here or hereabouts until after the Grand American Handicap at Willard Park, Paterson, N. J., the first week of April. So far he has had but pigeon scored lost against him since he came East; that was a "dead out of bounds" at Morristown.

The reappointment of Elmer E. Shaner, as manager of the Interstate Manufacturers' and Dealers' Association (gosh! what a long name!) for the tournament season of 1895, is one that will meet with the unanimous approval of all shooters who have attended the tournaments of the Interstate, etc. (now I've got it!) during '93 and '94. Mr. Shaner is personally popular with all classes of shooters, and also understands thoroughly the successful running of a tournament.

The fifteenth annual tournament of the South Side Gun Club, Newark, N. J., which will be held as usual on New Year's Day is worth while making a note of.

Charlie Zwirlein announces that he will have a big day at live birds at his grounds, Yardville, N. J., on Wednesday, Jan. 9. The main event will be as follows: 25 birds per man, $10 entrance, birds extra at 25 cents each, $50 cash added to the purse, handicap ranging from 26 to 32yds. Mr. Pentz will award the handicaps. There are few more popular men among the pigeon shooters of this section than Charlie Zwirlein, and there are few, if any, better grounds than at Yardville for such an event as the above to be successfully carried out. The shoot should be a success.

Another new fixture for the immediate future is the Climax Club's two days tournament at Fanwood, N. J., on Thursday and Friday January 10 and 11. The first day will be devoted to targets, the second to live birds. The second day's programme is as follows: No. 1, Jersey sweep, 4 birds, $3; No. 2, 6 birds, $5; No. 3, $1 miss and out (particulars below): No. 4, 10 birds, $10, handicap rise: No. 5, 7 birds, $5. Event No. 3, is what may be termed "the horse shoot," the prize being a horse valued at $65; a cash offer of $40 is guaranteed to the winner of the animal; no man can shoot off more than five chances; all surplus over the valuation of the horse added to the pot. The club has recently erected a comfortable club house, 42×16ft., well warmed and lighted. All who attend are guaranteed a good time by R. H. Manning, president Climax Club, and by D. H. Terry, Chas. ("Dutchy") Smith and T. H. Keller, tournament committee.

R. "Woods," better known perhaps as Dick Phister, who shot into the top row at the Emerald's monthly shoot on Dec. 18, is in the lead for the club's badge, with Louis Schortemeier a close second. There are two more shoots yet before the club's year is ended.

It is understood that the referees to whom was given the task of deciding the Page—Brokaw match difficulty, have agreed that the match must be shot out from where it ended. Brokaw was three behind with only eight pigeons to shoot at, while Page had nine left to complete his string of 200 birds. It will be remembered that this match, which was shot at the Westchester Country Club's grounds on Nov. 8, could not be finished on account of darkness.

Here is an amusing item from the Scranton (Pa.) *Truth* of Dec. 17: "The pigeon shoot of the Green Ridge Gun Club at the Driving Park on Saturday, was interfered with by boys, who stole a considerable number of the pigeons while the shooters were at dinner. The score, as far as it went, was as follows," etc.

Vice-President David Brown, of the West Newburgh Gun and Rifle Association, Newburgh, N. Y., writes under date of Dec. 20: "We have an extra shoot on the 25th with a collation added. Come up; we will have live birds, clay birds and stuffed birds." Stuffed birds are good—particularly in Newburgh.

Two important live-bird matches were recently decided in Pittsburg. The first, on Dec. 15, was between the brothers, D. H. and Theodore Hostetter on one side and J. Glesenkamp and Harry Vandergrift on the other, each man shooting at 50 birds. The brothers won by the score of 77 to 72, the individual scores standing: T. Hostetter 39, D. H. Hostetter 38; total 77. J. Glesenkamp 42, Vandergrift 30; total 72. The second match was shot on Dec. 20, the contestants being Glesenkamp and Thedore Hostetter, the latter winning by 84 to 76. The conditions are stated to have been '100 live birds, private stakes, price of the birds and suppers."

Eddy Morgan of Paterson, N. J., a member of the Paterson Gun Club, and also well known as an expert club swinger and oarsman, has met with a bad accident. While engaged in a friendly rough and tumble, he slipped and injured his kneecap in falling. He goes on crutches now.

It is said that L. S. Thompson has finally decided not to attend the international pigeon shooting at Monte Carlo this year. George Work and Fred Hoey will probably be America's only representatives in the great events which take place early in February.

The series of three 100-bird races between W. G. Clark of Altoona, Pa., and T. W. Morfey of Paterson, N. J., resulted in a victory for Morfey in each event. Although Clark lost each match he was by no means disgraced, as Morfey's form just now is equal to the best of them. Clark also handicapped himself in several ways, notably with his gun and ammunition.

Paul North tells a good story against himself: A short time ago he and Mrs. North were stopping with some relatives in Brooklyn. Returning home from the theater Paul and his wife were walking home just ahead of the rest of the party. When they came to the intersection of two streets they cut across instead of following the crossings. Hearing, as he thought, his friends just behind him, Paul, to explain matters, turned around and proclaimed loudly, "We are from Ohio!" The reply he got from those behind astonished him somewhat: "What the —— do I care where you're from." It wasn't his friends at all; they were half a block away. Tableaux!

The annual meeting of the Wilmerding (Pa.) Gun Club was held on Dec. 11. The following officers were elected to serve during the coming year: President, F. McEntosh; Vice-President, F. Hepting; Secretary, A. A. Mackert; Treasurer, W. B. Brush; Field Captain, W. W. Sharrard; Directors, S. S. Bishop, O. M. Reich, J. McElhany. The club will hold a live bird shoot open to members only in the morning of New Year's Day. The afternoon will be devoted to a shoot at targets, open to all.

EDWARD BANKS.

## CONTROL OF TRAP-SHOOTING

THE letters on the above subject published in our issue of Dec. 8, 15 and 22, show very plainly that there is an universal desire on the part of trap-shooters throughout the United States for the devising of some means, whereby the evils of dropping for place, pooling and combining, can be done away with. FOREST AND STREAM in the issue of Dec. 1, with a view to combatting the difficulty, proposed the organization of a National Association of Trap-Shooters; the idea being to fashion that organization on the lines of the League of American Wheelmen, the strongest organization of its kind in the country. With a shooting board, endowed with powers similar to those of the L. A. W.'s racing board, it was suggested that all delinquencies could be suitably punished, and the stains of crookedness wiped away from the trap-shooting tournaments of the present day.

The propositions of FOREST AND STREAM have met with a hearty indorsement. The results of the crusade, started only a few weeks ago, cannot but be very encouraging to those who favor honest, straightforward work at the traps.

Pittsburgh has taken the initiative and is moving in the right direction, judging from an item taken from a Pittsburgh paper of recent date, the paeticulars of which are given in full elsewhere. Memphis, Knoxville ane Cleveland have all expressed their determination to do what they can to eliminate all crookedness at their respective tournaments in 1895. Such isolated cases, only four out of many hundreds, will certainly accomplish a vast amount of good. It is only, however, by organized efforts that the desired results, the millenium of trap-shooters as it were, can be accomplished with any degree of certainty.

Trap-shooters, therefore, must organize.

Preparations are now being made to hold a convention in New York city during the latter part of January for the purpose of completing such an organization. Every gun club that is in favor of purifying the field of trap-shooting should make it a point to either send a delegate to attend that convention or indorse in writing the object for which it is called.

The call for such a convention will be issued as soon as date and place have been decided upon.

### Trap-Shooters Should Have a Court.

COLUMBUS, O., Dec. 20.—*Editor Forest and Stream:* Your scheme is in one sense all right—the great trap-shooting fraternity should have a court, a head. The same will serve to purify and name the punishment to fit the crime; but it does not rescue the sport from the great evil—the ringster, the manufacturer's agent. Amateurs are about to lay down their arms, except a few who have more pluck than judgment. We cannot endure it any longer. Our patience is now exhausted, and relief from the shark must come or we must abandon tournament shooting. G. M. WATERS.

### Interstate's Annual Meeting.

THE annual meeting of the stockholders of the Interstate Manufacturers' and Dealers' Association was held at Taylor's Hotel, Jersey City, N. J., on Tuesday afternoon, Dec. 18. Those present were Messrs. Chas. Tatham, Justus von Lengerke, J. A. H. Dressel, Noel E. Money and Paul North.

The following firms, members of the Association, were represented: Tatham & Bros., by Chas. Tatham; LeRoy Shot and Lead Works, Chas. Tatham (by proxy); Union Metallic Cartridge Co., J. A. H. Dressel; Smokeless Powder Co., Limited, Chas. Tatham (by proxy); American E. C. Powder Co., Limited, Noel E. Money; Cleveland Target Co., Paul North; Von Lengerke & Detmold, Justus von Lengerke. The only firm unrepresented was the Standard Keystone Co., of New London, Conn., whose factory had been totally destroyed by fire but a few days prior to this meeting. Mr. Chas. Tatham, president of the Association, presided

Among the various items of business transacted was the reading of the report of the treasurer, which showed the Association to be thoroughly sound financially. The report of the manager, Elmer E. Shaner, who was also present at the meeting, was read and received with thanks. (This report was given in full in our issue of Dec. 1.)

In the discussion that followed the reading of the manager's report, it was agreed that instead of carrying around all the small tents, the manager should be authorized to purchase one large tent to accommodate the shooters at the Association's tournaments in '95. It was left to Mr. Shaner to decide upon the size he needed, and also to purchase gun-racks for the use of shooters.

Another subject taken up and thoroughly discussed, was that of allowing the representatives of different sporting goods houses, not members, to attend the various tournaments given under the auspices of that Association; the claim made being that those firms thus derived equal benefit from the tournaments without any corresponding outlay. It was finally agreed that Mr. Dressel should write a letter to all such firms stating the association's views on the matter.

The meeting of the stockholders then adjourned after electing by ballot the following board of directors for 1895: Messrs. Charles Tatham, J. A. H. Dressel, Paul North, Noel E. Money, J. von Lengerke, Geo. H. Sampson.

A meeting of the new directors was called immediately after the above adjournment for the purpose of electing officers for the ensuing twelve months. The following is the list of those chosen to act during 1895: Pres , Chas. Tatham; Vice-Pres., O. D. Delano; Sec-Treas,. J. A. H. Dressel; Manager, Elmer E. Shaner.

The following committees were also appointed: Executive Committee—J. A. H. Dressel, chairman; Chas. Tatham and Justus von Lengerke. Classification and Tournament Committee—Justus von Lengerke, Paul North and Noel E. Money.

In regard to the arrangements for the Grand American Handicap, to be held April 3, 4 and 5, 1895, it was announced by the executive committee that contracts had been signed with the proprietors of Willard Park, Paterson, N Y., whereby the use of their grounds had been engaged for the purpose of holding the handicap there. It was also agreed that the price of birds should be 25 cents each. No gate money will be charged, but no one will be admitted to the grounds save by ticket. These tickets will be distributed by the members of the executive committee and the other directors. The idea of the Association is to keep out the undesirable element that might attend a large event such as the coming Grand American Handicap promises to be. The handicapping will be done by Messrs. John S. Hoey and Jacob Pentz, in connection with the classification committee.

### Mr. Fulford Would Abolish Class Shooting.

UTICA, N. Y., Dec. 15.—*Editor Forest and Stream:* Let the good work of purifying the trap go on. It is well to bear in mind though that the best government is that which governs the least. I would suggest to take away the motive for dropping for places by abolishing class shooting and universally adopt straight or high-gun system.

Dropping for place is done only at small, one-horse town and country shoots, and is almost unknown at Knoxville, Chamberlin and Manufacturers' and Dealers' Association shoots. Why? Because there is nothing to be gained by it. Note the Knoxville shoot of last season, $1,000 added, open to the world, nobody handicapped or barred, and what was the result? It brought out the best and greatest amount of trap-shooters ever got together in America. There was no dropping for place, there were no places to drop in. It was a straight or nothing; and the same with all the large tournaments. It is the small ones that need protection; the large ones protect themselves. E. D. FULFORD.

### The Elizabeth Bi-Monthly Shoot.

ELIZABETH, N J., Dec. 21.—The Elizabeth Gun Club's first bi-monthly shoot passed off successfully so far as the target day (Dec. 20) was concerned. To-day was live bird day, but, as will be seen from the scores given below, shooters did not put in their appearance till late in the day. The new electric pull of the Empire Target Company was used, and both traps and pull gave entire satisfaction. Ferd Van Dyke's shooting was the special feature of the day. Shooting in all events at a total of 185 targets he broke 178, missing but 7 during the day, thus averaging almost 95 per cent. W. R. Hobart, who is also a representative of the Winchester Repeating Arms Company, was well to the fore on all occasions. V. D. Kenerson, of Worcester, Mass., was present and shot along with the boys, breaking his full share of targets. Taken altogether, Dec. 20 was an extremely pleasant day and one that should encourage the Elizabeth Gun Club in its efforts to meet the demands of this vicinity for some regular target tournaments. Scores:

### For Utica in February.

UTICA, N. Y., Dec. 17.—*Editor Forest and Stream:* The undersigned will give a grand mid-winter shoot at Utica, N. Y., Tuesday, Wednesday and Thursday, Feb'y 5, 6 and 7, 1895. Two days targets and one day live birds. There will be eight 20 bird events each day, $2 entrance, birds extra, 2 cents each. The last day will be devoted to live birds and the Central N. Y. Handicap at live birds will be shot, conditions 20 birds each man, $10 entrance, handicap rises 26 to 33yds. All events open to the world, nobody barred, American shooting rules to govern all contests. Programme will be ready about Jan. 1, 1895, and will be sent on application. Richardson's Cottage Hotel will give special rates. If weather permits we will make this shoot one of the best ever held. E. D. FULFORD, H. L. GATES.

### "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co

### Brewer Outclassed.

IT is perfectly correct to say that Brewer was out-classed on Thursday, Dec. 20, at Morristown, N. Y. Frank Class and Jack Brewer had an argument some time since as to the number of birds the latter could kill out of 50 from 5 traps, 30yds. rise, 50yds. boundary. Class claimed that Brewer could not kill 46 out of 50 on his grounds at Morristown Driving Park, if he (Class) provided and trapped the birds. The result was a wager of $100 a side, the date being fixed for Dec. 20.

The day was a lovely one, clear sky, good light and no wind; apparently the clerk of the weather was not going to give Brewer the worst of the weather if he could help it. Class, however, never seemed to be in the least afraid of the final result; he had confidence in his birds, a confidence which was not misplaced. They were hummers every one of them, that is the first 28 or 30 of them. It did not look as if the birds were quite as good after the 26th round (when Brewer was shot out), as prior to that round. The start he made was auspicious, killing his first 9 very cleanly. Then he got one of those indescribable twisting fellows that beat him entirely; his 11th bird also got away from him. The 18th and 29th were the next birds to get off, leaving it necessary for Brewer to kill 31 straight if he was to win. Six more straight was his score when he let the 26th get away; this spoiled his chances and appeared to make him shoot carlessly because he let five more birds escape before the 50 had all been trapped, although the last 20 could not be said to compare with the first 30.

Several sweeps were shot during the day, Class being decidedly on top of the heap as he missed but one bird in all the sweeps, totalling 33 out of 34 shot at. Scores:

Match, Brewer versus birds. $100 a side, Class betting that Brewer cannot kill 46 out of 50. The upper figures show the traps pulled:

### Pittsburgh Is After Droppers.

THE following from the Pittsburgh (Pa.) *Commercial-Gazette* of Dec. 18 is of particular interest at the present time:

Pittsburgh wing shots are getting ready to deal a hard blow at crooked shooting. The first meetings in 1895 of the local gun clubs will see a decided move made against the too prevalent custom of "dropping" in contests. The Herron Hill and the North Side gun clubs have already announced their intention of strewing the pathway of "droppers" with thorns rather than roses. To those unacquainted with the term of "dropping" the following will explain: Suppose ten or a dozen shots go into a race, say 50 targets or birds; $100 is in the purse, which is to be divided among the four high men, 45, 30, 15 and 10 per cent. It has come down to the last pair of birds. A and B have not missed a shot, they are tied at 48 each with 2 more chances. C has 46 birds out of 48 shots, while D has 43. E is somewhere behind, but should A and B come out a tie he is in for fourth money, as the tie men must divide. A steps up and kills both his birds, completing a clean score. He cannot be beaten. B can tie him, but B is out for the money and does not care to tie him. He figures that the man by killing all his birds now cannot touch him. By dividing the $45 with A, if he ties him, he will receive $22.50, while C, who is yet lower down, will take entire second money, $30. B steps up and intentionally misses or "drops" one bird, leaving his score 49 to 50 for A, clinching the $30 purse for B, drawing C down to third money, $15, D to fourth money, $10, while E is left to sympathize with the man who fell out of the balloon. It is plain that B's crooked work has robbed C out of $15, D out of $5 and E out of $10; A has gained $22.50, while B, the crooked man, has increased his purse $7.50.

The custom of "dropping" has been prevalent all over the country, but the Herron Hill and the North Side clubs propose to stop it. Said "Old Hoss," the well known shot:

"The North Side Club will, at its meeting on Jan. 8, add to our by-laws a clause against 'dropping.' We will expel any member found guilty, and any visiting shot who comes to us and does this crooked work will be at once ruled off the grounds and be forever barred from shooting with us again. This must be stopped. It is the worst of crookedness, and is killing the sport. Right here in Pittsburgh we have men who say this work is legitimate, and they would 'drop' if they got a chance. It's not right, and they know it. Oh, yes, we can tell whether a man misses a bird intentionally or otherwise."

Secretary Lautenslager of the Herron Hill Club, said his club had also discussed the matter, and would rule against the crooked work. There was to have been a meeting of the club last night, when Lautenslager was to have brought the matter up, but there was no quorum and the matter went over till the Jan. 27 meeting.

### Keystone Shooting League.

FRANKFORD, Pa., Dec. 20.—The Keystone Shooting League held its first live bird shoot of the season at Holmesburg Junction yesterday afternoon; in point of attendance and excellent shooting it proved one of the most successful shoots held in this city. Among other clubs represented were the Cosmopolitan of New York, Riverton and West Jersey of New Jersey and Forest and Frankford of this city. The birds being a speedy lot the shooting was consequently lively.

## The Morfey-Clark Series.

ALTOONA, Pa., Dec. 20.—Two hundred spectators witnessed the first of the series of three matches already announced between W. G. Clark of this place and Thos. Morfey of Paterson, N. J., at the Juniata Base Ball Park on Monday, Dec. 17. The shooters faced the north and a perfect hurricane swept across the traps from the west. The birds were a good lot, although some were a little tardy in the start, due to the cold weather.

Although Clark at the end of the first quarter had lost six to his opponent's one bird, the race was a very interesting one. Clark seemed to settle down to solid business, and when he had killed his next 25 straight it looked as though Mr. Morfey had no cinch. He shot a remarkably good up-hill race. This being the first match he had shot at as many as 100 birds, one could see that his lack of experience as compared with the years of practice by Morfey was a great handicap. Any one who thinks that Bill Clark is not developing into the higher ranks of shooters will some of these days meet with a surprise if they cross his pathway. It's only a few years since we of the Alleghenies saw Bill shoot at his first flying target. What a steady change has taken place since then! Taking advantage of every opportunity (and a sport to the backbone) he has developed into one of the best all around shots in the Keystone State. There was some excuse for his losing the first bird, for a more difficult one never left a trap. He hit it hard but it managed to get beyond the boundary. He made remarkably fine kills on his 15th, 46th, 48th, 59th and 90th birds, while the only inexcusable loss was his 84th, which he missed clean. He hit nearly every bird lost, but only raggedly.

Morfey shot a winning race from start to finish. At no time did he seem other than confident of winning. His kills were clean, and whether a bird was hard or easy seemed to give him little concern, His 37th, 44th, 54th, 81st and 84th kills were exceptionally fine ones. He remarked after the race was over that he had never shot quite so good a gait in his life. He thought some of those down wind quarterers were the fastest he had ever seen, and they certainly were hummers.

The match was governed by the I. M. & D. A. revised Hurlingham rules. Both men stood at the 30yds. mark. The traps used were a new invention by Bill Clark and Thomas House, a machinist of this city. They are made entirely of hard wood and worked to perfection. Letters patent have been applied for, and they will be heard from in the future.

Both shooters used Greener ejector guns. Clark shot 45grs. E. C. and 1⅛oz No. 7½ chilled shot in first barrel, and 50grs. E. C. and 1⅛oz. No. 6 chilled shot in second barrel, using U. S. Rapid cases. Morfey shot 50grs. E. C. and 1⅛oz. No. 7½ chilled shot in first and 50grs. E. C. and 1¼oz. No. 7 chilled shot in second, using U. M. C. Trap cases. Elmer E. Shaner, of the I. M. & D. A. made a very acceptable referee. The score, 100 live birds per man, $100 a side:

*Second Match.*

The second match of the Morfey—Clark series was decided Dec. 19, at Willard Park, Paterson, N. J., Morfey winning by 8 birds with a score of 90—82.

Clark handicapped himself most decidedly two different ways: in the first place he traveled all the night previous to the match, leaving Altoona at 10:40 P. M., Dec. 18, arriving in New York about 7:30 A. M., Dec. 19; that can hardly be considered a very good preparation for a stiff 100-bird race. In the next place he was obliged to use a new load as he found the load he used on Monday was too light for the job he set it. These two things or any one of them, are often sufficient to handicap a man out of a race. Shooting as Morfey is now, no one has any license to beat him easily, his present form being worthy of the cracks. Of course he misses a bird now and then, they all do it at times, but his misses come in few and far between.

It must be conceded that Clark had very hard luck, no less than 9 of his birds falling dead out of bounds, while 7 others got away hit apparently hard enough to stop them. Bird after bird flew over the boundary line, and dying in mid-air, dropped to the ground like a stone. It looked very often as if he undershot many of his birds, particularly incomers; this may be, and probably is, due to a very large extent to the extreme drop (about 3¼in.) in the stock of his Greener. His longest run was only 13, whereas Morfey made one of 31 and another of 14.

The birds were a good lot, as good a lot as one needs have to shoot a race at. As a means of judging how good they were, and how rapid the work of trapping and retrieving was, the following figures are quoted, giving the time for 50 birds: First 50, 25 minutes; second 50, 24 minutes; third 50, 25 minutes; fourth 50, 25 minutes; making the total for the 200 birds of 99 minutes! If Willard Park can supply the same class of birds for the Grand American Handicap next April there'll be no kicking at the advertised price, 25 cents each.

Among the lookers-on were Paul North ("from Ohio"); J. A. H. Dressel, of the U. M. C. Co.; Elmer E. Shaner, referee of the match; James Condrin, Altoona, Pa.; Charlie Zwirlein, Yardville, N. J.; Frank Class, Morristown, N. J.; James Timmons, Morristown, N. J., etc. Frank Class was trap puller.

In the score given below the top row of figures denotes the trap pulled in each case. Scores:

*Divided on the shoot-off.

*Third Match.*

The third match, and concluding one of the series, was decided on Charlie Zwirlein's grounds at Yardville, N. J., on Friday, Dec. 21, Morfey winning by the score of 94 to 88, Clark's experience gained in the first two matches standing him in good stead. He shot a far superior race on this day to the one he shot at Paterson on Dec. 19. His score of 88 shows that, while a glance at the flight of his birds discloses that the luck of the birds was with Morfey, Clark drawing a long way the hardest birds. Taking the first 50 birds, the race was a good one, the score showing 46 to 45 in favor of Morfey. Charlie Zwirlein had promised to have a supply of good birds on hand, and he kept his promise well, although there were, as usual, a few duffers among the lot. The grounds at Yardville are very convenient and comfortably fixed up for spectators and shooters, while, as at Morristown on Wednesday, the dinner in the middle of the day was, to use a favorite term, "out of sight."

The time consumed in shooting the 200 birds was 112 minutes, 13 minutes longer than on Wednesday. The day was an exact reproduction of the two preceding ones, each of which were bright, clear and cool, with hardly a breath of wind stirring; just the days for good scores. As a result of the three matches, Morfey killed 279 out of 300 to Clark's 256 out of the same number, a lead of 23. Prior to the first match Morfey stated that he would make an average of 90 for the 300 birds; it will be seen that his average was just 93. Clark's average was just a fraction over 85 per cent.

Morfey's star run of the series was one of 57 made in this match the third one. After having his 34th bird drop dead out of bounds he killed straight up to the 92d round; his 92d and 93d birds, both corking good ones, got away from him just when it looked as if he was going to kill right out; as it was he killed 73 out of his last 76 birds, having missed 3 in his first 24, viz: his 6th, 8th and 24th. His 10th tried hard to get out of bounds but failed to hold on to the top of the fence, falling dead inside just when it appeared sure to get away. Clark did some fine work with his second barrel, saving many a bird that looked as if it was lost; Morfey's second barrel was really needed very little as his first was very sure indeed.

As in the other two matches, Elmer E. Shaner, of Pittsburg, Pa., was referee. John Bowles of Willard Park, was trap-puller. Score:

GRANT.

## Emerald's Monthly Shoot.

DEXTER PARK, L. I., Dec. 20.—The Emerald Gun Club held it regular shoot on Tuesday last, Dec. 18. The day was clear and co , with a northwest wind. That the birds were corkers is well show by the trap score type giving the flight of the birds. Not a singl straight score was made; L. Gehring and R. "Woods" each scored 9 out o 10; there were four with 8 and thirteen with 7 each. The attendance was 28 as against 30 at the last shoot of the club, held Nov. 20. Scores:

HALF-SHELL.

## Des Moines, Iowa.

DES MOINES, Ia., Dec. 14.—To-day Mr. C. O. Perkins gave a special live bird shoot on the Highland Gun Club grounds, 25 live birds, entrance price of birds. To those making 100 per cent. went five turkeys; 90, 80 and 70 per cent. got one turkey, and 60 per cent. won a chicken. Budd and Perkins made 88 per cent., Hicks and Burnett 72 per cent., Whitney 60 per cent. The rest of the boys bought meat for a Sunday dinner. The weather was fine and a good stiff breeze helped the birds outside the boundary. We have done but little trap-shooting the past two months, but as the game season is about over we will soon be in line with our weekly shoots, the scores of which I will send you. Scores:

C. W. BUDD.

## Effect of Suction on Gun Wads.

Mr. TENNER says that wads are stretched (thickened?) to twice their length by the suction of the shot charge. If the shot charge moves faster than the wad during their passage through the barrel, and nothing fills the space between the shot charge and the wad, then there is a vacuum. Does Mr. Tenner claim that this is the case? Suppose it is the case; then there is no pressure of any kind against the upper or shot-charge side of the wad, but the powder gases are supposed to be pressing against the lowest side of the wad and pushing it along the barrel; this can have no tendency to stretch or make the wad thicker. The only way a wad can be stretched, is for its two sides to be pulled or pushed in opposite directions at the same time, and pressure on one side and nothing on the other, does not do this.

If the vacuum theory is correct, then a pressure test taken at that part of the barrel in which the vacuum occurs, would show no pressure. Has any one ever found that place?

During their passage through the barrel the vacant spaces between the felt fibres of the wad are filled with powder gases which leak around the edges of the wad, and are forced in among the fibres although the wad is at the time under tremendous pressure between the shot charge and the propelling gas. In other words, the wad is charged with gas at a high pressure, and does not stretch, because an equal pressure surrounds it, but the instant it leaves the barrel this outside pressure is removed and the gases within the wad then force its sides apart, sometimes tearing it entirely apart, but generally only thickening it. If Mr. Tenner is rightly understood ,he says the loose base wads are drawn up the barrel during the passage of the charge along the barrel.

How can this be, when the space between the wad and the base wads s filled with gases that are driving the charge out of the barrel?

Those base wads were driven up the barrel in the following manner: These wads were loose in the bottom of the shell. Gas leaked behind them and was compressed there, not moving the base wad because there was the same pressure on both sides of it, but when the front pressure was removed by the discharge of the wads and shot from the muzzle, the compressed gas behind the base wad blew it partly through the barrel. The gases behind the base wad were also assisted by a partial vacuum that is always in the barrel an instant after its discharge, and which is caused by the air being blown away from around the muzzle of the gun by the powder gas, and the gas immediately afterward losing the greater portion of its volume through sudden loss of heat. That there is a vacuum in the barrel after the discharge, the writer found accidentally, when a boy, by putting the muzzle of a rifle a few inches under water and trying to shoot a fish. On withdrawing the gun from the water a quantity of powder-blackened water ran out of it. A great deal more than there would have been if the water had only risen in the barrel to the height it stood outside of it. If the shell was not gas tight around the primer, this vacuum might be sufficient to draw the base wad into the barrel. It seems improbable that suction, as Mr. Tenner calls it, could move the base wad into the barrel with sufficient force to bulge the barrel, for suction, as the word is used here, means the removal of air or gas pressure from the upper side of the base wad, and it is then, according to Mr. Tenner's theory, pushed up the barrel by the pressure of the air below it, and this pressure, it is well known, is less than 15lbs. per square inch. Would so light a pressure force a base wad up the barrel hard enough to bulge the barrel?

O. H. HAMPTON.

## Woodruff beats Batsch.

THE following score was made at the grounds of the Midway Plaisance Club at Earle's Half-Way House on Dec. 13. The match was for $100 a side live birds per man:

NEWARK.

## Flushing Shooting Club

THE following scores were made on the grounds of the Flushing (L. I.) Shooting Club, near Murray Hill station on the Long Island Railroad. For some unaccountable reason only two of the numerous entries for the Invitation Cup put in their appearance, L. T. "Davenport" again beating his solitary opponent and winning the cup for the second time. Score:

No. 1, Cup race, second contest, 25 live birds, $10, birds extra:

| | |
|---|---|
| L T Davenport (31) | 2020021222221212222212200—20 |
| C M Meyer (29) | 22012●1220221222222210002—19 |

No. 2, 5 birds, $1, two high guns:

| | | | |
|---|---|---|---|
| C M Meyer (29) | 21121—5 | F Deraismes (25) | 22111—4 |
| L T Davenport (31) | 10222—4 | C M "Drake" (26) | 22100—3 |
| T Rowe (25) | 09222—3 | | |

No. 3, same:

| | | | |
|---|---|---|---|
| C M Meyer (29) | 22221—5 | T Rowe (24) | 00220—3 |
| L T Davenport (31) | 12122—5 | F Deraismes (25) | 21001—3 |

# Answers to Correspondents.

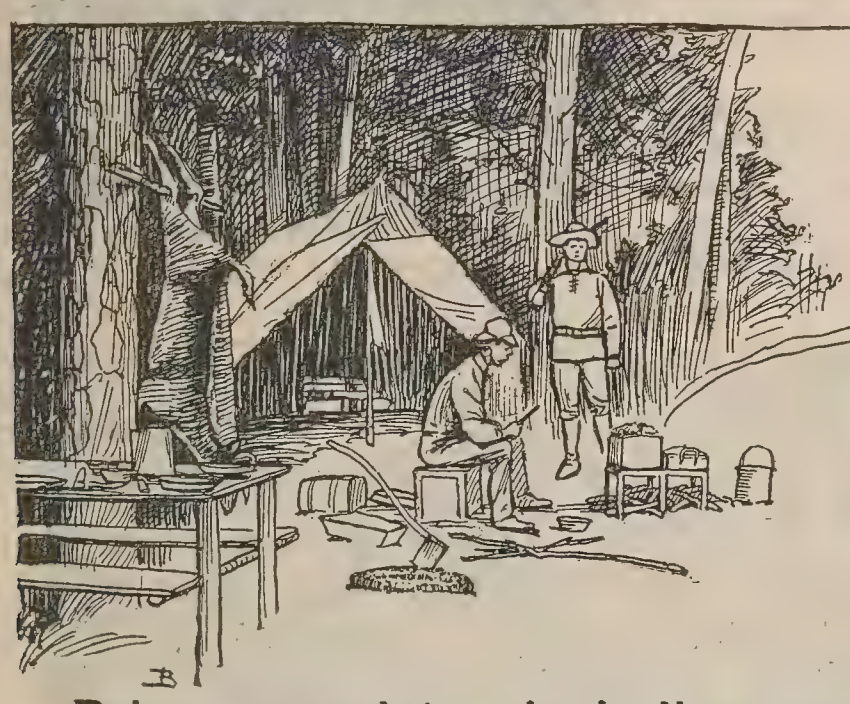
O. W. W., Oneida, N. Y.—Send for report of Fish Commissioners, 53 Broadway, New York.

J. M. S., Simcoe, Can.—Any of the cartridge companies or dealers advertised in our columns will furnish the shells you desire.

T. B. L., Chowen, Minn.—Will you kindly let me know through your Answers to Correspondents where the best deer hunting region in Minnesota is? Ans. Try Pelan, Kittson county.

W. H. KAY, Davenport, Ia.—Can you recommend the Linenoid canoes? Has this material proved itself to be equal to wood for boat building? Ans. Superior canoes are made of this material, which, to the best of our knowledge, are both strong and durable.

C. A. P., Norwalk, O.—1. Will Southern quail do and breed well brought North and liberated? 2. Where is the best place to buy? 3. Which month should they be brought in? 4. What the best way of handling and transporting quail for breeding purposes? Ans. 1. Yes, though they are of course not as good as native birds. 2. See our advertising columns. 3. As late in the season as you can get them. 4. See full directions in FOREST AND STREAM of May 5, 1894.



R. K., Brooklyn, N. Y.—For deer shooting what caliber is most appropriate? What distance is best to target a rifle at? What action you consider the best, lever or sliding action under barrel? Whether smooth or octagon barrels? Ans. Caliber and the other points mentioned are matters upon which there is a wide diversity of opinion. Personally, we prefer the heaviest caliber that can be handled without inconvenience to the shooter. The .45-90 is a very powerful gun. The .38-40, .44-40 and .38-55 are good guns for deer hunting. We have never been able to see that the octagon barrel had any advantage over the round barrel. Target your rifle at 50yds. Either action will give satisfaction.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

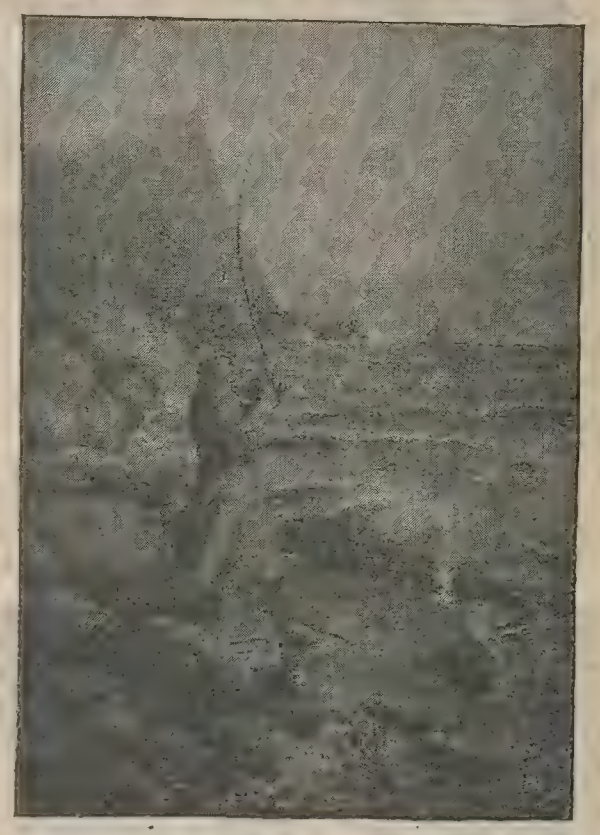
# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

### AS PREMIUMS.



We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal; on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** 6 *months and any two pictures*, **$3.**

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

## Lancaster's Famous Book,

# THE ART OF SHOOTING.

**By CHARLES LANCASTER.**

**AUTHOR'S PREFACE.**

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

LONDON, FOURTH EDITION, 1892. PRICE $3.00.
